SIRENS AND SONS.

Secretary Root is the only cabinet member who wears a silk hat down to work every day. Senator Milton, the new senator from Florida, has a heavy black mustache and long black hair. He looks like a Spaniard, which he isn't.

ABOUT CEMENT TILE.

It is only justice and fairness to those contemplating the drainage of wet land to speak another word of warning touching the use of cement tiles in the manufacture of which the proper kind of clean, sharp sand has not been used or which do not contain a sufficient per cent of cement to give them strength and durability.

IT DEPENDS.

"How do you pronounce s-t-i-b-e-y?" the teacher asked the young gentleman nearest the foot of the class. And the smart boy stood up and said it depended a great deal whether the word applied to a man or a bee.—London News.

WHERE THE POEMS GO.

"John, I must have a new gown." "But that old gown of yours is a poem."

A WINNING COMBINATION.

The first five or six years in the life of an orchard may be counted upon as well nigh unproductive. To overcome this some grow a cover crop in sections where the winters are cold, which, being a secondary consideration, can be counted on for but a slight return.

THE NAME

On any package is a guarantee of HIGH MERITS. All of RYDALE'S REMEDIES are the Prescriptions of Eminent Specialists or long tried Recipes, Compounded from the Purest Drugs by SKILLED CHEMISTS.

RYDALE'S COUGH ELIXIR

A Memory For Fares.

Six-year-old Marie is a minister's daughter, says Lippincott's Magazine, and one Christmas found half a dozen dolls under the Christmas tree. There they stood during the Christmas week, when, realizing that six or seven dolls in addition to other toys were too much of a good thing, mother, who had the look ahead temperament, resolved to kidnap one of the family and put it by for the next year. To all appearance the scheme was carried through successfully, as no inquiries were made, so on the next Christmas the last year's baby reappeared under the new tree. Next morning Marie, accompanied by the usual number of admiring groupings, was taken to view the tree. Fixing her eyes on the absentee and holding her dimpled chin with a chubby hand, after a period of deep thought she remarked in a puzzled tone: "Where the dickens has I seen that face before?"

The Greatest Indian Orator.

Pontiac exemplified at once the best and the worst traits of the American Indian. He seems not to have been so great a warrior as Osoleca, nor as able a general in the field as Cornstalk, nor so unselfishly a patriot as Tecumseh, but as an organizer among a people with whom organization is almost impossible and as a master of the treacherous statecraft of his race he probably surpassed them all. As soon as his death was known the French governor at St. Louis sent for his body and buried it with full martial honors near the fort. "For a mausoleum," Parkman finely says, "a great city has arisen above the forest here, and the race whom he hated with such burning rancor trampled with unceasing footsteps over his forgotten grave."—Lynn Tew Sprague in Outing Magazine.

A Mustard Bath.

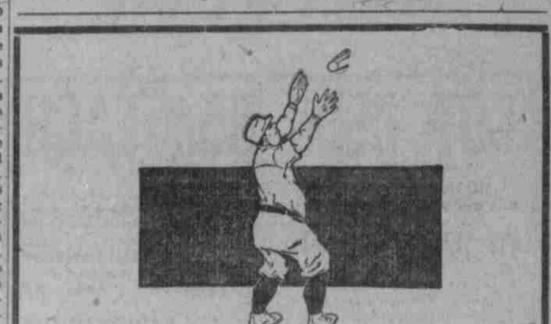

Nothing can be more refreshing to wearied limbs than a bath in which there has been thrown a tablespoonful of dry mustard. As soon as the bath is over there are felt a delicious glow and a perfect refreshment of mind and body.

Open Wide the Door Have a SPECIAL LINE

Comparatively, a party line is a narrow way that you share with six or eight others and the other parties' customers or callers crowd out those seeking you.

Vermont Telephone & Telegraph Co.

Phone 246-2 135 No. Main St.

PUT OUT!

It is easy to put out electric light and it is easy to turn it on again. What is the result? It is easy to practice economy and keep the bills down. You let the gas burn to save the trouble of relighting and it all costs money. You put out the electric light when you leave the room.

Moreover, it is cool, clean, steady, cheerful and convenient, and with our service you turn the button and the light burns ALWAYS, day or night, winter or summer.

rows. There was a very good reason for this state of affairs, which was that the soil, not being stirred and frequently as it should, baked and dried out much more rapidly than would have otherwise been the case, while the weeds that were encouraged by this neglect served to still further aggravate the situation and take from the soil the little moisture which it did contain. This matter of the physical condition in the soil resulting from ample cultivation is one that is sadly ignored or completely overlooked by all too many farmers. The importance of the point can hardly be given too great emphasis.

There was recently captured at San Pedro, Cal., a sea turtle seven feet long weighing about a thousand pounds and thought by those acquainted with this type of sea life to be at least a thousand years old. Those who caught the turtle tried to land it alive, but it became entangled in the buoy ropes and was finally towed to dead.

A Peruvian strain of alfalfa is being developed by the department of agriculture which, it is claimed, grows more rapidly, starts earlier in the spring and grows later in the autumn and will stand more severe winters than the ordinary kinds. Officials of the department predict that it will be introduced into the northern states in the near future.

If buyers do not give the price for a product which the grower feels he should in fairness receive, it may be well for him to harvest his product and hold it for a better price, provided it is not too perishable a character. This would hold true of apples, potatoes, onions, beans, several root crops and likewise the grain crops. This can, of course, be more effectively done if those interested in a given product cooperate to secure the end sought.

Of the imported summer help which has assisted in securing the great grain crops of the Dakotas, Kansas, Nebraska and Oklahoma none has been found more satisfactory from the employer's standpoint than the many college boys who have taken this means of swelling the fund which is to help carry them through the coming year's schooling. Not only have they been found active and intelligent, but energetic and willing to perform the duty required of them.

The Shasta daisy, one of the finest floral creations which Luther Burbank has to his credit, is seen gracing many a western park and garden and furnishes one of the finest features in the floral display to be found at the Seattle exposition. It is a rank and thrifty grower and has a beautiful blossom with hollow heart and pure white strap shaped petals which often have a spread of three inches. It was admiration from all who see it, and it will not be long until all up to date florists will have it in stock.

A Minnesota feeder has a good word to say for the Jerusalem artichoke, a distant cousin of the wild artichoke

which has proved a pest in many a tiled field. He has found that horses, cattle, hogs, sheep and goats like the tubers and even eat the leaves, while some feeders use the tops as silage. He suggests the artichoke as a ration along with alfalfa or clover pasture, the animals being finished for market with an added ration of ground oats and peas, wheat or barley. Further south corn would naturally be the forage.

Many a farmer in sections where the usual rainfall is ample, but likely to be a little short during the latter part of July and August, might well learn a helpful lesson from the irrigation farmer of arid sections of the west, who, shortly after flooding his orchard or other cultivated crop, at once proceeds by careful cultivation and harrowing to make a mulch of the mellow soil on the surface and thus retain the moisture which the soil has been given with much pains on his part. The principle holds as well whether the moisture comes from a ditch or falls from the clouds.

Some experiments which have been conducted by the department of agriculture have made clear the important fact that the work of insects, and especially the borer known as the "sawyer," may be very greatly reduced if the bark of such trees is removed within a month after being blown over or if they are cut into logs without removing the bark and placed in ponds or streams. In the case of timber which is allowed to lie with the bark on it has been found that its value is reduced about one-third within a period of two months. When so much attention is being given to a conservation of our forest resources, a suggestion of this kind ought to be well received by those whom it most directly concerns.

One of the most deplorable sights which the traveler through the west sees in large areas of fertile mountain slopes which have been denuded of their magnificent growth of conifers by the deadly fumes of copper smelters or the terrible forest fires set by sparks from passing trains, by the campfire of careless hunter or axman or by revengeful Indians who have sought by this means to debar the white hunter from a territory over which its primal owner could no longer hold sway. So intense have been some of these fires that not only the giants of the forest have been killed and in many cases half burned by the conflagration, but all seeds and seedlings destroyed, which will prevent reforestation except by artificial planting. In most cases the land referred to is too rough and steep for tillage, so it is doomed to idleness until such time as systematic planting is undertaken.

J. E. Trigg
