

ABOUT THE STATE

HAPPENINGS OF INTEREST FROM DIFFERENT SECTIONS

As the ballot box at Dorset was turned before the limit of time was up there is a question as to the legality of the "no" majority vote of six on the license question.

Over 40 cousins of Mr. and Mrs. George H. Harris helped them celebrate their fortieth wedding anniversary the other day in Brattleboro. Mr. Harris has been in the employ of the Estey Organ company for over 40 years.

Earl Davis of Newfane has brought suit for \$500 against the Central Vermont railway company for the death of a horse, alleging that it was the duty of the company to maintain a suitable fence beside its railroad track through his land. The horse wandered on the track and fell off a bridge.

Charles H. Darling received a request recently from a St. Albans girl for permission to engrave copies of his recent version of "That's Where Vermont Comes In," for which permission was given her. The collector yesterday received a personal gift of a handsomely engrossed copy, decorated with a picture of Camel's Hump and the Vermont coat-of-arms in water colors.

For the first time in many years the frost has penetrated to the depth of five or six feet in Burlington streets and it is still going deeper. There is always danger after frost has gone below five and a half feet that it will get down to the service pipes, which are generally at six feet and in some cases lower. The water department has recorded a much larger number of frozen metres than usual and they are still coming in. There have been some bad breaks.

HOW TO RAISE POTATOES.

Place of the Potato in Crop Rotation—Fertilizers—Remedy for Fungus.

The potato prefers a loamy soil, rather dry, but good crops are often produced upon heavy clay, says Gerald McCarthy in the Indiana Farmer. Experience has demonstrated to every farmer that profitable crops of this tuber cannot be grown upon starved soil, nor soil in a poor physical condition. The best results are attained when the potato crop is made the last component of a three or four-year rotation, in which grain and clover, or clover and timothy, are the others. The Ohio experiment station, for some years, has carried on a series of crop rotations on the glacial drift soil of that state, substantially similar to the typical drift of the entire western region, and with potatoes had easily obtained an average yield of about 2200 bushels an acre. By using pedigree seed-tubers, and making careful selection each year from the most prolific hills, small hills in many localities have yielded at the rate of 250 bushels. The potato is a staple food which every one eats; the annually increasing population of the United States is not fully supplied with enough potatoes, so that a poor year for the crop means importation from European countries. Beside its use as a food for man and beast, the potato is utilized as a source of starch and alcohol; it is quite certain that the annual production might be doubled without overloading the market.

More than any other staple crop except tobacco and sugar beets, the potato is valued for its quality. The American taste demands a dry, mealy, highly-flavored tuber, of medium size and oval shape; the tuber cannot be too white. To obtain this quality due attention must be given to the character and drainage of the soil, and to the quality and quantity of fertilizer used. Stable manure never should be applied directly to this crop when a high-grade delicacy is desired. Too much nitrogen in any form tends to produce a coarse tuber, too little potash will result in a watery or soggy tuber, and too much yield. In Ohio, on rich soil, the best fertilizer has been found to consist of two pounds of phosphoric acid, 25 pounds of nitrogen and 83 pounds of potash per acre. This upon land in a high state of fertility and following a clover crop. The phosphoric acid is best obtained from acid phosphate; the potash from the sulphate and the nitrogen from the nitrate. In every case, up to \$24 per acre, the greater the cost of fertilizer the higher the net profit; starchy potato crop is the worst kind of foolishness. We recommend the following fertilizer for the potato, on good corn land, and following a clover crop, in a regular rotation, namely: Nitrate of soda . . . . .175 pounds Acid phosphate, 14 per cent 150 pounds Sulphate of potash . . . . .200 pounds Directions: Mix and sow broadcast or drill before planting.

The most injurious disease of this crop is scab, a fungus which lives in the soil from year to year. The best remedy is to soak the uncut seed tubers in a solution of two ounces of corrosive sublimate in 10 gallons of water for two hours. Where a large amount of seed is to be prepared a better plan is to fumigate for 24 hours with formaldehyde gas, made by adding three pints of commercial, 40 per cent formaldehyde, to 23 ounces of commercial permanganate of potash. This dose is for a space of 100 cubic feet. The potatoes may be placed in sacks or open barrels or on shelves. The fumigating method is better than the soaking, because the former is not poisonous; the latter is, and is apt to injure the tubers in cutting and dropping of seed. Both are effective preventives of scab.

Cut seed to two eye-pieces, and drop one piece about every 14 inches in the drill, which should be four to six inches deep. The drills may be spaced at from 30 to 36 inches apart, but the closer the drills the larger the fertilizing dose must be or you will get only small potatoes. Our standard formula is for 36-inch drills. As soon as planted, go over the drills crosswise with a smoothing harrow, which will about half fill them; five days later go over the drills again, but from the opposite direction. Continue the harrowing until the potatoes break ground, and then substitute the weeder, going crosswise as before. After

Count Killed in Auto Crash. Santander, Spain, March 9.—Count Marquis, grand minister of the queen's household, was killed yesterday in an automobile collision.

Former Boxer Is Murdered. Columbus, O., March 9.—Johnny Albanese, a former featherweight boxer, was shot and killed here yesterday by a stranger who escaped. A witness said the stranger demanded money.

Count Killed in Auto Crash. Santander, Spain, March 9.—Count Marquis, grand minister of the queen's household, was killed yesterday in an automobile collision.

Bill Dahlen, the former manager of the Dodgers, has not signed a contract yet but is expected to be appointed head of the Dodgers' scouting department. Dahlen is now visiting at Hot Springs, Ark.

HOW TO SAVE YOUR EYES

Try This Prescription Free

Do you eyes give you trouble? Do you already wear eyeglasses or spectacles? Thousands of people wear these "windows" who might easily dispense with them. You may be one of these, and it is your duty to save your eyes before it is too late. The eyes are neglected more than any other organ of the entire body. After you finish your day's work, you sit down and rest your muscles, but how about your eyes? Do you rest them? You know you do not. You read or do something else that keeps your eyes busy; you work your eyes until you go to bed. That is why so many have strained eyes and finally other eye troubles that threaten partial or total blindness. Eyeglasses are merely crutches; they never cure. This free prescription which has benefited the eyes of so many may work equal wonders for you. Use it a short time. Would you like your eye troubles to disappear as if by magic? Try this prescription: Go to the nearest wide-awake drug store and get a bottle of Optima drops; fill a two-ounce bottle with water. Drop in one tablet and allow it to thoroughly dissolve. With the liquid bathe the eyes two to four times daily. Just note how quickly your eyes clear up and how soon the inflammation will disappear. Don't be afraid to use it; it is absolutely harmless. Many who are now blind might have saved their eyes had they started to care for them in time. This is a simple treatment, but marvelously effective in multitudes of cases. Now that you have been warned, don't delay a day, but do what you can to save your eyes, and you are likely to thank us as long as you live for publishing this prescription.

er the stalks get too high to cross the drills, begin cultivating, but keep this as shallow as practicable while destroying weeds. Except upon wet land, never hill or ridge the crop, and give only sufficient cultivation to keep down the weeds.

The crop must be sprayed at proper times to prevent injury by beetles and by blight; the old Bordeaux mixture and paris green are still the best spraying materials. Get specific instructions from your state experiment station. The selection of seed is of more vital importance, as regards profit, than is the case with any other staple crop. Under exact the same care and feeding; a pedigree seed will often yield 50 bushels more to the acre than common seed, and the crop will be of a uniform, saleable grade, with few culls. Start with selected seed, and each year from the most prolific hills select medium-sized, handsome tubers for seeding the next crop. Careful annual selection will prevent a variety from running out.

TRAIN COLLISION INJURED TWO MEN

Milk Train Struck Rear of Freight on Boston & Maine Railroad in Fairlee Yesterday Forenoon.

Fairlee, March 9.—As the result of a rear-end collision between an extra freight and a milk train on a sharp curve one mile north of Ely station of the Boston & Maine road in this town, shortly after 10 o'clock yesterday morning, two men were seriously hurt and three freight cars and a caboose derailed and burned.

Members of the crew of the freight bound from Berlin, N. H., to White River Junction jumped for their lives when they saw the locomotive of the milk train suddenly appear in their wake, bearing down upon the caboose at high speed. All but one of the men, a brakeman by the name of Cook, escaped unhurt. Cook landed heavily on the embankment sustaining injuries to his back.

The freight train, heavily loaded, was proceeding at a slow rate of speed when the accident occurred. The milk train southbound from Newport to Boston was late and the engineer was crowding his locomotive to make up time.

Shooting around the curve, both engineer and fireman Muzzey saw the freight ahead at the same time. The emergency brakes were applied, too late, however, to avert the crash.

The impact hurled the caboose and three cars of the freight off the track. Fireman Muzzey was seriously injured when the crash came. He stuck to his post as did the engineer. His head came in contact with the sides of the cab and he was rendered partly unconscious. Exerting great effort the engineer brought the milk train to a stop.

In spite of the efforts of the crew of both trains to prevent it, fire started soon after the collision in the debris of the wrecked caboose and before it was extinguished the "buggy" and three cars were destroyed together with their contents.

Brakeman Cook and Muzzey were removed to a nearby house and later taken to their home in Newport.

SIR G. W. ROSS DEAD. Was Known as "Father of New Ontario."

Toronto, March 9.—Sir George William Ross, senator of the Dominion of Canada, and formerly premier of the province of Ontario, died Saturday, after an illness lasting several weeks. He was born in 1841. Sir George, by profession a lawyer, was known popularly as "the father of new Ontario," owing to his immense activities in the development of that province. He was recognized as one of the best public speakers in the Dominion. He was strongly in favor of reciprocal trade relations between Canada and the United States, and a resolution introduced by him in 1882 gave birth to the movement in favor of reciprocity. He was called to the Senate of Canada by King Grey in 1907, and was knighted by King George in 1910. Sir George was a prolific writer on education, temperance and contemporary history.

Former Boxer Is Murdered. Columbus, O., March 9.—Johnny Albanese, a former featherweight boxer, was shot and killed here yesterday by a stranger who escaped. A witness said the stranger demanded money.

THE BUSINESS FARMER'S CORNER

THE PREVENTION OF POULTRY DISEASES

JOHN R. BOWIE

Fowls are liable to be affected by a number of diseases and may also be infected by various kinds of parasites which live on the surface of the body and also in the crop, stomach or intestines, taking the nourishment which should be used to put on flesh or produce eggs and also cause irritation and inflammation.

The contagious diseases produced by animal and vegetable germs are the most important the poultryman has to contend with in trying to keep his birds healthy. These germs and the parasites should be kept out preferably by preventive measures, although there are cases where medicines may be advantageously given. As a rule, however, it is better to kill sick fowl, the cost of treatment being greater than the value of the birds. Moreover, the spread of contagious disease is also there.

Starting Right. To start right, then, set eggs from a flock which has shown no indications of contagious disease for at least a year; avoid putting these eggs in packing such as chaff, etc., which may be musty or moldy; wipe them with a cloth wet in 70 to 80 per cent alcohol and hatch them in a thoroughly cleaned incubator. The young chicks should then be free from parasites and injurious germs of all kinds, and to keep them so put them to run only upon ground which has not been used for fowls for several years.

Should hens be used for hatching the chicks pick out those known to be healthy and dust well with lice powder before setting. Their nests should be perfectly clean, and there should be a box of road dust or sifted hard coal ashes under cover where they can dust themselves. When the young chicks are taken from the nest examine carefully for lice. These parasites accumulate under the throat and on the top and back of the head, and if any are found rub a little sweet oil, pure lard or vasoline with the finger over the parts where the lice are.

By starting thus a flock may be raised practically free from disease germs and parasites, but to keep germs and parasites from developing and increasing to a dangerous extent, the hens must be kept clean, the drinking fountains and feed troughs washed every day or two with boiling water, and if any mites are found on the birds or in their houses, the roosts and adjoining parts of the walls should be sprayed with a good disinfectant used in connection with freshly slaked lime.

FERTILIZERS AND GREEN MANURE CROPS.

Cheap Insurance Against Poor Crops. C. A. MOERS.

Tennessee Experiment Station. As an all round means of soil improvement no other material equals manure. Frequently, however, people want to know what to use to supplement insufficient supply of manure. If nothing be known about the special needs of the soil use a high grade complete fertilizer, such as truck growers make. One thousand or 1,500 pounds per acre is not too much, and this amount may be applied broadcast and mixed throughout the soil.

However, a part may be saved for the row or in the hill for crops like potatoes, tomatoes, etc. But will even 1,500 pounds per acre of high-grade complete fertilizer build up the fertility of the soil? The answer is quite simple. Fifteen hundred pounds of fertilizer contain several times the phosphoric acid removed by a heavy crop of vegetables, and the unused portion will remain in soil for the benefit of succeeding crops. The supply of potash need not give concern, but the weakness of the fertilizer is the low content of the high-priced element, nitrogen.

Use Care in Selection. A comparison of the proportions of plant-food elements present in fertilizers with those found in crops will make this point clear. Take corn, for example. In mature plants for every ten pounds of phosphoric acid are found twenty-three pounds of potash and thirty-two pounds of nitrogen, but in a common brand of trucker's fertilizer are four ten pounds of phosphoric acid are four pounds of potash and only three and one-third pounds of nitrogen. Thus 1,500 pounds of such fertilizer does not con-

Where Is Your Memory Located? In the March American Magazine H. Addington Bruce writes an article entitled "The Soul's Winning Fight with Science," in which he shows that science is no longer at war with man's belief in the immortality of the soul. In the course of the article appears the following interesting passage which tells of the memory: "It is one of the fundamental tenets of modern physiology that every thought, every sensation, is accompanied by some change in the substance of the brain; and not only this, but that the brain stuff is constantly passing away and being replaced in such fashion that it has been estimated there is an entire renovation on an average of every seven years. How, then, no matter how much we strain the hypothesis of 'memory cells,' 'neural paths,' and other material adjuncts to the memory process, can the new brain of the amnesic revive the memories belonging to the brain of fourteen years before?"

Special "Health Warning" for March. March is a trying month for the very young and for elderly people. Croup, bronchial colds, lagrippe and pneumonia are to be feared and avoided. Foley's Honey and Tar is a great family medicine that will quickly stop a cough, check the progress of a cold, and relieve inflamed and congested air passages. It is safe, pure, and always reliable.—Adv.

Just Right for Backache and Rheumatism. Foley Kidney Pills are so thoroughly effective for backache, rheumatism, swollen, aching joints, kidney and bladder ailments that they are recommended everywhere. A. A. Jeffords, McGrew, Nebr., says: "My druggist recommended Foley Kidney Pills for pains in my back, and before I finished one bottle, my old trouble entirely disappeared."—Adv.
