The architects' working plans are about finished, and a meeting of the executive officers of the two roads will be held in Chicago probably one day next week to agree on how the bids for the construction of the big depot will be let. Officers of the two roads say they will make the job a "rush" one and will exact fast work from the builders. During the construction of the new station the Rock Island, Lake Shore and Nickel Plate lines will use the Grand Central station of the terminal company, Fifth avenue and Harrison street.

Apples the Diet For the Sedentary.

Apples are very wholesome and digestible. They contain considerable potassium and sodium salts, magnesium, a little iron and about 85 per cent of water. Apples, being rich in pectin, form readily into jelly. They also contain free organic acids as well as salts, such as malates, citrates and tartrates. They are quite laxative, more so if taken late at night or early in the morning with a glass of water. Their nutritive value is not much, as they are largely composed of water. For invalids apples are best when baked and eaten either plain or served with cream.
