

Tobacco, Like Food, Must Be Fresh To Be Good

And tobacco cannot keep fresh after it is cut up, any better than bread or meat can. To get fresh tobacco, you must cut it off the plug yourself, just before it goes into your pipe. That's the way you use Sickle tobacco—that's the reason it burns slowly, and always affords you a cool, sweet, satisfying smoke.

Tobacco that comes already cut-up, in packages, gets dry and stale—burns fast and hot, and bites your tongue. The original flavor and moisture cannot escape from the Sickle plug—they are pressed in and kept in by the natural leaf wrapper.

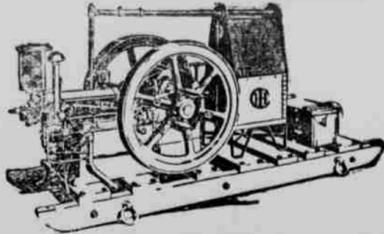

More tobacco—fresh tobacco—no package to pay for—no waste—that's Sickle tobacco. Get a plug at your dealer's today.

Successful farmers are no longer asking, "Shall I buy an engine?" They have passed that point and now inquire, "Which engine shall I buy?" A little careful observation will show that International Harvester engines are the most satisfactory. No doubt is left when features like the following are studied: Detachable valve guides, offset cylinder head, fuel pump, split-hub fly-wheels, extra large intake and exhaust valves, etc. Ask the men who have used IHC engines. That is the best test. They will explain the excellence of IHC construction, simplicity, strength and durability. Study the engines yourself at the nearest dealer's where International Harvester engines are sold. They are made in all styles, and range in size from 1 to 50-H.P. They operate on low and high grade fuels. Write for our interesting and instructive catalogues, and when we send them we will tell you where the engines may be seen. A postal will do.
