—Division Chief, C. L. Cureton has had more territory thrust on him. Greenville division, under Chief Hall having been deposed. It is needless to say that Chief Cureton will make good. Letter From College Park, Georgia.

College Park, Ga., R. F. D. No. 2. June 25—

Dear Sentinel-Journal:—

It has been quit a while since I have sent in copy to the Sentinel-Journal and as I have a few items that interests me I at least think should interest the readers.

I went up to Atlanta the other night to hear the leading candidates for governorship honors and the immense auditorium held over 6,000 people and fully that many had to stand on the outside. Hon. Hoke Smith was the first speaker. He spoke one hour. Clark Howell, editor of the Constitution and the strongest opponent of Hoke Smith, spoke one hour and a half.

I was on White Street Saturday and saw Bob Holcombe of Six Mile, S. C., get off a car and was in haste to catch another. It makes a fellow feel happy to run a cross an old acquaintance from his native country even if we don't get to shake hands.

It is only 9 miles out here to my

LACE BARK TREES.

The Beautiful and Serviceable Dress Materials They Yield.

There are in all about half a dozen lace bark trees in the world, so called because the inner bark yields a natural lace in really made sheet form, which can be made up in serviceable articles of apparel. Only four of these various species of trees are of much practical value. Tourists who have stopped at Hawaii or Samoa may recall the lace bark clothing of the natives—clothing of a neat brown color when new, of remarkable strength and of a fragrant odor, like freshly cured tobacco leaf. The native tapa cloth, as it is called, is made from the bark of the *Brussonetia papyrifera*, but it is not usually included among the real lace bark trees. In its natural state the real lace bark is of a delicate cream white tint. It is probably a kind of fibrous pith. When the outer bark is removed it can be unfolded and unwound in one seamless piece, having a surface of a little more than a square yard. Washing and sun bleaching give it a dazzling white appearance. The fabric is airily light. It is used in the West Indies for mantillas, cravats, collars, window curtains—in a word, for every purpose that ordinary lace is used. In making up shawls, veils and the like it is customary to piece two sheets of lace bark together. Delicate and apparently weak as it is in single mesh, a bit of lace bark if rolled into a thin string will all but resist human strength to break it.—New York World.

UNCONGENIAL FLOWERS.

Mignonette and Roses, For Instance, Will Not Mix.

The florist frowned as he took up an order for a table decoration. "That will never do," he muttered. After calling up the customer and suggesting a change, he told his new clerk a few things.

"You must never take an order that calls for a mixture of mignonette and roses," he said. "A centerpiece of those two flowers wouldn't last half through the luncheon. They simply wilt one another. I don't know why, but they can't get along together.

"It is true of many flowers. Pansies, for instance, last twice as long if they are not combined with any other flower, and the same may be said of violets. Jonquils and daffodils, on the other hand, seem to get a new lease of life if you combine considerable green with them. Carnations will go all to pieces if you combine them with roses, although the roses do not seem to be affected.

"It is more striking in combinations of green with flowers. If you try to use an entirely different type of foliage from what the flower is used to, it won't last so long. So I never put feathery foliage with lilies of the valley, for you know its natural foliage is a thick leaf. I never use thick leaves with carnations, for their foliage is of the feathery type. It isn't as though the flowers fought, but they seem to grieve at being misunderstood."—New York Press.

A Lure For Cock Robins.

Two coins clicked together give so good an imitation of the robin's metallic note that this device has long been employed in England to attract the welcome "harbinger of spring." Formerly male robins were snared by the clicking of two copper pennies near a dummy bird. The dummy was perched on a twig smeared with bird lime, and cock robin, attracted by the sound and suspecting a rival, flew at him with blood in his eye. This is in violation of the bird laws in the United States, and no one who lives where robins make their home in confidence is likely to give the odd trick so unpleasant a finale. The clicking coppers serve a much more agreeable purpose as a means of rendering cock robin sociable.
