YOUNG FOLKS COLUMN.

ENTERTAINMENT OF VARIOUS KINDS FOR BOYS AND GIRLS.

A Four Footed Clock, or How the Children of the Celestial Empire Tell the Time of Day by Examining the Pupils of a Cat's Eye.

Everybody knows that cats can see in the dark, and the reason they can do so is because of the peculiar construction of their eyes.

It is a well known fact that cats can see in the dark, and the reason they can do so is because of the peculiar construction of their eyes.

ALL AROUND THE HOUSE.

A Few Novel and Effective Adjuncts Introduced at Modern Dinners.

There are so many novel adjuncts to the modern dinner, one grows a little confused when attempting to choose the most effective.

Dishes are becoming the embodiment of refined taste and labor, and whether embroidered by the patient toil of the Orient or by the deft fingers of some American maid, are almost too dainty to be breathed upon.

A style just now in fashion, by the way, is to work table napkins with one large embroidered border. The hostess may, if she prefer, write her own initials in letters half an inch or more high across the corner of the napkin.

Flowers play an important part at dinners and luncheons. At a recent luncheon given to some young girls twelve bunches of daisies were presented, attached to each was a card with a ribbon streamer radiating to the plate of each guest.

Caniles with colored shades are well liked, especially when they are made of a material which has a lace or floral pattern.

Fancy dishes of salted almonds and silver trays of luncheon, provided with the dainty things now in vogue, prove themselves smiling ones in the desert of linen, and at a time when radishes are in season a dish of these, served with their coats peeled back, like the petals of a flower, prove a most attractive arrangement in green and red.

A great point gained is to have the table present an attractive appearance without being fancy. It is a bad taste to let the hostess in vain crowd each other in the course; a little perspective adds to their effect. Less may be served in the fruit and flower forms now so much affected, and a leaf of rose geranium in the finger bowl is not amiss, says Decorator and Parishner, from which the above items were gleaned.

Chair Back with Embroidered Border. The novelty of the chair back represented in the cut consists in its embroidered border, the details of which are shown in Fig. 2.

The chair back may be made in silk or plush, but the latter is recommended as richest in appearance. A central square of red-velvet plush may be embroidered with the rose spray and bird, or may be decorated with the applique designs that can be purchased for this purpose.

The Weaving of Life's Web. Jim Phillips, as represented in our cut, is at what he calls "a loose end," which means, I suppose, that he has nothing to do; and from his appearance one would imagine that his want of occupation is not troubling him very much.

How Boston Cooks Broil Steak. At the Boston cooking school, pupils are advised to first wipe and trim a steak; next grease the gridiron and broil over a clear fire.

To Circumvent the Fly. A sponge saturated with strong carbolic acid and suspended in the room is one of various popular expedients for inducing the insect to fly to take its departure.

To wash lawn and lawn dresses so they will look new no soap, but a quart of bran in about six quarts of water for half an hour.

Caution Fruit Jokes. Fruit juices may be kept by canning, the same as fruit itself, and often prove very refreshing and grateful to the sensitive stomach.

At Saratoga. "Dear me, Clara, don't let me hear you use that vulgar expression again."

Country Enterprise. "And is that yellow dome, which rises in the field yonder, the roof of another dwelling?"

An Accomplished Cook. "Madame—Can you cook a cold roast? Cook—Yes, madame. Can you make a luncheon? Cook—Yes, madame. Madame—Can you speak Volapuk? Cook—Finestly, Madame—Well, if you will do that, you will do it, if you think you will."—Boston Gazette.

His Full Name. "Miss Ethel—Do you know, Mr. Featherly, what that pleasant little Mr. Sissy's first name is, who is playing tennis with Clara Dillberry?"

Notice of Forfeiture. TO THE HEIRS OR ASSIGNS OF THE LATE WILLIAM DAVIS. You are hereby notified that the undersigned has expended three hundred dollars (\$300) in labor and improvements on the land described in the foregoing notice.

FOOD FOR INFANTS.

A Physician Gives Some Good Advice to Anxious Mothers—Health Hints.

As to the kind of food best suited to young children, it may be accepted as an axiom that the mother's milk is the most nutritious and best adapted to the child's system.

The mother with an infant at her breast should be careful to observe the most scrupulous hygiene, and to regulate her diet accordingly.

When on account of the quality or insufficient quantity of the mother's milk, some other food must be provided for the child. It is a good rule to select the substitute.

MAKING A RUBBER SHOE.

Supplementary to the great shoe-making business here is the rubber industry, for which Boston is the great center in this country.

Forty million dollars' worth of rubber shoes and boots are sold in the modern Athens annually. The raw material comes from Para, Brazil, in huge lumps, which the natives make by dipping sticks in the sap of the caoutchouc tree and turning them round and round in frequent plunges into the heated rubber over a hot fire.

These lumps, upon reaching the factory, are cut in slices, which are run through rollers and pressed out thin and flat like pancakes. The sheets thus obtained are next put through other rollers, heated to a high temperature, and incidentally amalgamated with the markings of lamplike sulphur and litharge, which reduces them to a soft and putty like consistency.

Finally, in this soft condition, they are passed over steel rollers bigger than any that have gone before, and actually incorporated with the tissue of a woven cloth which is destined to serve as the lining of the eventual boot or shoe. If you will try to pull apart the lining and outer coat of a rubber sandal, you will obtain a portion of the thoroughgoing with which this part of the manufacture is performed.

The rubber sheets, thus prepared, are passed through a last set of rollers, on which are engraved all the markings and corrugations of the sole and upper that appear in the completed article.

The rubber sheets are now ready for the cutter, who turns out the various pieces by hand, with the aid of a knife and patterns. The parts are then put together by other workmen with rubber tape.

When this work has been accomplished, the shoe or boot is laced in the usual way, and, after being varnished, is allowed to remain for eight hours in a room heated to the temperature of 235 degs. The heat sets the varnish and tempers the rubber, which is then termed "vulcanized."

The stamping of the firm name on the sole is the concluding operation, and then the rubber shoe is ready for sale.—Boston Cor. Chicago Tribune.

Horses' Delight in Sound. It has been often observed by those who had to do with horses that these animals have their proper pride in regard to the looks of their harness and trappings. The horse is quick to show his pleasure or displeasure, and he does this at times with marked emphasis.

It is not limited to the delight of the eye, but he is equally moved by the sensation of sound. Horses seem in many cases to be conscious of the tones of the music which is being played, as the case may be, made by the bells which are put upon them in the winter when they are driven to sleigh and sled.

Mr. Hisey, an Englishman who has made a trip through his own country, and has written a book about it, found birds in use all the year round on the narrow country roads of his native land. A driver of one of those teams told him that once, being in a hurry, he neglected to put on the bells. The consequence was that the horses were so indignant that they refused to start.

As soon as the bells were fixed on the horses started and went contentedly on their way.

These simple tastes of the horse appear much like vanity. The animal seems wholly insensible to the charms of landscape, but its fancy is taken by the glitter and flash of a bit of brass or iron. It takes no notice apparently of the sweetest notes of singing birds heard in the thicket about its pasture, but is delighted with the rattling of bells, and which it makes music by its prancing step and by the tossing of its neck.—Youth's Companion.

The Bandmaster of West Point. The cadet hop is a scene of almost bewildering beauty. It takes place in the mess room in Grant hall, and is attended by the portraits of great commanders, so thickly that it looks like a picture gallery. The floor is of hard wood and perfectly polished. Upon a little platform the band is seated. Its leader is a young man of a proud and haughty physique, and is evidently profoundly impressed with his own importance.

I have seen many eminent and powerful personages, in whose hands rested the destinies of states, but have seen all they look in the presence of a really exalted bandmaster.

When he troves harshly at the bass fiddle, when by a twist of the wrist he inspires the flute to renewed exertions, when his fiery eye lights on the unhappy man who hangs the cymbals, and maddened them at the wrong second, when he becomes excited and throws himself around on all sides at once, how it does seem as if the music came right out of the end of his basket. Now he shuts his eyes reverently and moves his hand slowly, like a virtuoso strain of a single violin touches your ear. Now his hand beats wildly, and a tumultuous chorus breaks forth from the rear of an angry battery or the shout of a victorious host! And he does it all with just that little black scepter. What majestic composure with his last—West Point Cor. New York Tribune.

Coos is the dried leaf of a South American shrub, valued for its stimulating narcotic properties, which it is said to possess in a greater degree than opium, tobacco or any other vegetable production. The leaves are gathered and dried in the sun, and mixed with quichims, and are chewed by the Peruvian Indians, the effect being to support the strength for a considerable time in the absence of food. Its use is attended with pernicious consequences, as the appetite for it increases, and the power of resistance diminishes, until at last death comes as a result.

The Buyers' Guide is issued March and Sept. each year. It is an encyclopedic and indispensable reference for all who purchase the luxuries of life. It can be obtained for a nominal fee, and will give you all the necessary and unnecessary appliances to ride, walk, dance, sleep, eat, drink, work, or play in any style, or stay at home, and in various sizes, styles and quantities. Just figure out what is required to do all these things COMFORTABLY, and you can make a fair estimate of the value of the BUYER'S GUIDE, which will be sent upon receipt of 10 cents to pay postage.

THE BUYER'S GUIDE. MONTGOMERY WARD & CO. 111-114 Michigan Avenue, Chicago, Ill.

Notice. Mrs. E. H. Gilbert left my bed and room, the public is hereby notified that I will not be responsible for any debts contracted by her.
