MAP COLUMBUS QUADRANGLE

A new map of the Columbus Quadrangle in Luna county has been issued by the U. S. Geological Survey. This is one of the areas along the Mexican border that were mapped by the Geological Survey in cooperation with the War Department.

It is typical of the arid region of the Southwest, where the flats are very flat and the mountains very steep; where all the year's rain comes down at once in a torrential flood; where for more than ten months of the year few clouds flock the turquoise dome of the sky; where the intense glare of the afternoon sunlight goes away in a rich golden sunset, which is in turn followed by a soft purple twilight. Here the summers are long and the days are hot, but the nights are invariably cool.

No trees grow here except the hardy mesquite—which produces more wood for fuel from its roots than from its trunk and branches—and a stunted juniper, which is found in the hills. Turbulent streams come tumbling out of the Tree Heronias mountains, on the western part of the quadrangle, but on reaching the level lands, overcome by the heat, they vanish into the air or crawl underground. A few shallow wells furnish water for short irrigation ditches that feed small patches of alfalfa.

Cattle raising is more or less of an experiment, but some flocks of sheep and goats help to make the foothills picturesque.

The Tree Heronias mountains rise to heights of more than 2500 feet above sea level, and their long slopes extend several miles eastward to the plains. A rectangular system of roads serves the ranches on the plains, and the El Paso and Southwestern Railroad crosses the southern part of the quadrangle.

The Deming road, which runs a little west of north straight across the quadrangle, is the graded bed of a railroad that was never finished. It was this road that General Pershing and his troops followed in their pursuit of Villa into Mexico after the rail on Columbus. The

scale of the map is one mile to the inch and the contour interval is 10 feet showing the height of all parts of the area above sea level.—New Mexican.

There was a meeting of an advertising club recently in El Paso and Scott White, former president of the Ad Club, who attended a convention in Indianapolis recently, made a brief report. He said it was brought out that out of the 75,000 business failures last year 75 per cent were among firms that do not advertise. He said 75 per cent of the advertising is done by the 1,000,000 retail concerns in the country. He added that it had been practically demonstrated that only truth in advertising paid. As added evidence to Mr. White's report, it may be remarked that anyone may pick out the successful firms in any city, Columbus included, by turning the pages of any newspaper. The successful merchants are represented by their advertising.

L. L. Burkhead, the Columbus Daily Courier's representative at the San Francisco convention, will give his inside information to the Daily Courier's readers every day next week. Mr. Burkhead will have a "shad" over other correspondents, in that he is one of New Mexico's twelve delegates to the convention.

If you want to see any village grow into a city over night, compare a concrete road from any large city to it. Hotels, restaurants, amusements, oil stations, in fact all business, increases as if by magic.

Owens of Oklahoma is the Western man who has a show for the Demos cratic nomination. The Daily Courier predicts that when the Mr. Adams-Cox deadlock takes place, Owens will be the darling of the convention.

By turning two screws on a California inventor's sheet steel mold for building concrete walls after the concrete has been tamped, the outer sides are expanded and the core contracted for easy removal.

This issue of the Courier contains the minutes of the meeting of the Board of Equalization and also the minutes of the meeting of the Board of County Commissioners of Luna county.

When Columbus gets an incubator agent, conditions will improve. And Columbus is going to have one, and that means an open part of entry.

The Daily Courier is for good roads. Experiences in other states prove their wonderful value to a community.

"If anyone is delaying building, awaiting a cheaper market, they are crazy," remarked a real estate yesterday.

Get your "Stars and Stripes" out. The size cuts no figure. It is the flag that shows the heart—as a rule.

Columbus will celebrate the Fourth of July in the time honored way.

Good improvements in this end of the county are imminent.

"Honor among thieves." Couldn't tell you. Never was one.

Daily Courier, 75 cents per month.

Three Wolves in Ramah District Eating Cattle

RAMAH, N. M., June 26.—According to the reports of ranchmen in the vicinity, wolves are becoming very numerous, and during the spring have destroyed many calves, and in some instances have injured full grown cattle. The wolves are of the large bluish variety, and so most of their work is done at night. It has been almost impossible to kill them off by shooting. It appears that most of the killing has been done for pleasure, as many ranchmen have reported to government hunters, but on account of the shortage of men in the biological survey, it is thought little can be done this season, and many of the ranchmen are now making attempts to trap these predatory animals.

Mimbres Rancher Owns Splendid Hereford Stock

SILVER CITY, N. M., June 26.—Robert Bell, a rancher on the lower Mimbres, now has some of the finest Hereford breeding stock in the southwest and several promising bulls and heifers have been born on the Bell ranch this spring. Bell's herd is headed by Boss Randolph, a son of Grand Champion Randolph, which was sold a year ago for over \$50,000. On the female side of the herd Bell has blood of some of the most famous Herefords known in the United States. The foundation of his herd was purchased several years ago in Hereford, Texas, and careful breeding is continued. Bell soon will have some of the finest cattle in America.

INNERITS TEN MILLIONS

Alice Antonetta De Lamar of New York city, who has inherited \$10,000,000 of the estate of the late Captain Joseph R. De Lamar. In 1918 the De Lamar estate was estimated at \$20,000,000. Appraisal of the estate today shows an increase of \$8,447,720.

PROSPECTUS OF Romaho Mining Co.

Authorized Capital \$400,000. Shares Par Value \$1.00

[Yesterday's issue of the Daily Courier contained the first display advertisement of the Romaho Mining Company. It contained a brief purport of the company. Named its officers and board of directors and published the first paragraph of its prospectus. Today's advertisement may be dry reading—but not to anyone interested in the Tree Heronias, those wonderful mineralized mountains containing untold wealth lying nine miles from Columbus.]

(Continued from Friday) An examination of the conditions present lead to the conclusion that there were at least three distinct periods of uplift, steadily increasing in intensity and extent of action and culminating in the formation of the high range forming the northeast part of the group mentioned above. The result of these various movements is plainly indicated by the presence of fault zones and fissures having a northwest-southeast strike. One of the principal fault zones enters the property of this company near the east end of the Mellowan No. 1 and passes through the Grasshopper, the Waterloo and the Dorothy W. Examination of the fault zone of this district indicate unmistakably the presence of large bodies of quartz porphyry veins occupying such fault zones, which fact is further discussed under Mineralization. Mineralization. The mines of this district have been known for many years and have yielded a moderate production from the Original vein and from lead, silver and zinc deposits in limestone, nearly all of which production has come from the near surface high grade ore strata or pockets, no attempt being made to ascertain if the ore persisted in depth. The evident intent of the early day miners was to clean out such ore as could be easily reached, and further, such ore as led itself to the then known methods of concentration and smelting. An estimated production to date of several hundred thousand dollars in gold, silver, lead and zinc from this district from workings which can be classed as surface, or open, will give an inkling of the possibilities contained in the proper development of the immense bodies of quartz porphyry ores which have been tapped in the last year. Because of the immense strides made in the perfection of milling machinery and processes of concentration, the vast bodies of low grade ores which have been tapped below the early day workings and in development work can be handled cheaply and with such a degree of success that all values are saved. (Continued Monday.)

Kentucky Man Found Slain in Brother's Office

DETROIT, Mich., June 26.—August Dwyer of Middleboro, Kentucky, a traveling auditor for the United Mine Workers of America, was found dead in the office of his brother, Dennis H. Dwyer, an attorney, here last night. According to the police, he had been strangled. The office bore evidence of a struggle and of hearing a disturbance but said they could not remember seeing anyone leave the suite.

Frank H. Dohany, a prominent attorney and bank director, later was obtained for investigation. Questioned by the police, Dohany denied any connection with Dwyer's death, according to the officers, explaining the presence of blood on his clothing by saying he had found the dead man on the office floor and lifted the body into a chair.

According to the brother of the dead man, Dohany was one of a party of lawyers who gathered in his office during the evening, and Dohany and the union official were left alone in the office about 9 o'clock.

Dwyer was virtually a stranger to every member of the party but himself, the brother stated. He came here five days ago on personal business. He was 37 years of age.

Grocery on Truck is the Latest, Calls at Your Door

HOUSTON, Texas, June 25.—The help-yourself grocery store idea has been developed a bit further. The latest scheme is a "mooey-mooey" grocery that is being started here. It is a grocery store on a truck which calls at your door to supply your wants. This latest idea has been patented by the Mooey-Mooey Grocery Company, which announces it will have a fleet of ten touring self-serving stores in operation in Houston July 1. The company says it is the ultimate aim to reach every town in Texas with a population of more than 5000, and later to extend to other states. It is now advertising for managers in towns throughout the state. The slogan of the company is "We Go To You. Our Store at Your Front Door."

FOUND EUROPE HUNGRY

B. Herman, assistant to Herbert Hoover, food commissioner, who has just returned from war-ridden European countries. He found conditions abroad little better than they were at the end of the war.

Pinos Altos Store Is Destroyed by Fire

SILVER CITY, N. M., June 26.—The general store owned by Leman Tressarrow at Pinos Altos was completely destroyed by fire of unknown origin last week. The fire was discovered at 10 o'clock at night and the flames had gained such headway it was impossible to do anything towards saving the building or its contents. The building was brick and adobe and was valued at about \$1000, and the stock at about \$350. There was a small insurance on both. As there was no one in the store at the time the origin of the fire is a mystery.

Silver City Boy Run Down by Auto Truck

SILVER CITY, June 25.—Gustaf Ringsted, aged 7 years, was seriously but not fatally injured when he was struck by a Ford truck at the corner of Bullard and Market streets here a few days ago. The boy had just stepped off the curb

and was about to cross the street when the truck rounded the corner, knocking him to the pavement and rendering him unconscious. The father was near at the time and carried the boy into the office of Dr. Gilbert, where he was given first aid treatment, after which he was taken to his home. No bones were broken and it is believed he will recover. Mr. and Mrs. Stephens are Michigan people, here for the health of their daughter, who is in a local sanitarium.

White Signal District Reports Radium Deposits

SILVER CITY, N. M., June 26.—The work of installing the big on site and the air compressor at the Merry Widow shaft of the Radium Company in the White Signal district has been completed and more rapid progress can be expected from now on. According to reports from White Signal, two new deposits of ore have been discovered as the result of careful prospecting of the claims, and further development work will be started at once. More machinery is now in transit and by the end of the summer it is expected that mining will be carried out with a large force of men and modern machinery.

NOT BARGAINS JUST NECESSITIES

Blue Blotting Paper, large sheets, for office desks; also Thumb Tacks to keep it in place. Writing Papers for ladies and gentlemen; all colors and sizes. Ink—all colors, and Ink Wells. WIRE WASTE BASKETS LETTER FILES INVOICE FILES (The Large size.) Large stock Grape Papers, all colors, for almost every use.
