

What Cheap Stoves Really are

The manufacturer of cheap stoves never cuts his price to the customer; **INSTEAD, HE CUTS THE QUALITY OF THE MATERIAL.** Of course, this means that you can buy stoves at a low price, but remember, you're getting a low grade, inferior stove.

YOU SELDOM GET

something for nothing and the so-called "cheap" stoves are dear at any price. Our **PEARL SUPERB RANGE** is made of two thicknesses of steel, **INTERLINED WITH ASBESTOS.** Anyone can see the importance of this! Asbestos being a non-conductor, confines the heat in the Range.

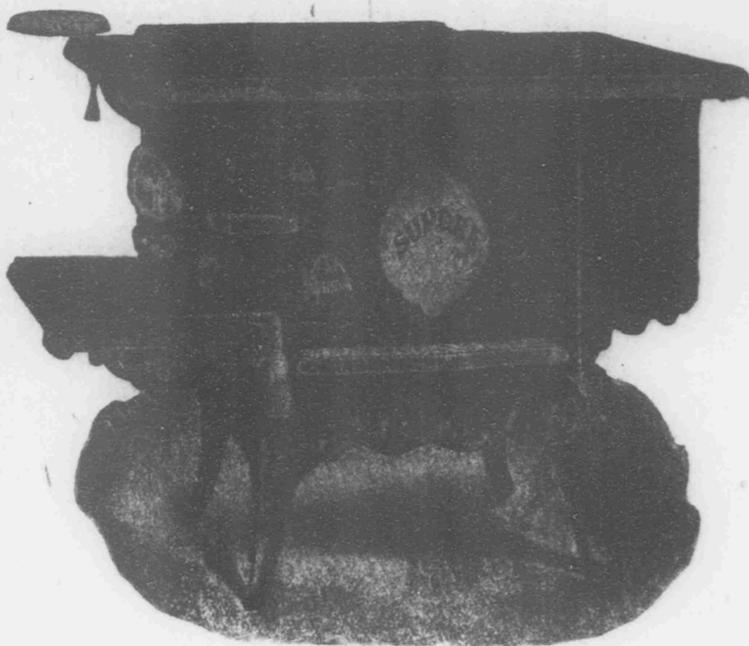

YOU CAN'T FIND

a cheap range anywhere that's insulated as it should be. If it's insulated at all, thin, flimsy asbestos or a cheap substitute is used, and as a consequence a lot of heat, instead of doing your baking as it should, escapes into the room. A good system of insulation means a saving of fuel. **YOU CAN SEE THAT!**

OUR PEARL SUPERB RANGE

YOU KNOW

as well as we do, that a cheap stove or range, made of cheap material and poorly mounted, will buckle and warp, leak air, and eat up a lot more fuel than it ought to.

EVERY PIECE

of casting that goes into a Suberb Stove or Range is as perfect as it can be made; smooth as velvet, pleasing to the eye, as highly polished as some **NICKEL** work you have seen.

Come and let us show you our line before you buy. We can prove to your entire satisfaction that the life of SUPERB STOVES and RANGES is from 5 to 10 years longer than almost any other make. If you can't come to Live Oak, write us a postal card and say, "Send me your new 1909 Stove Catalogue, with net prices." We will save you money.
