

**IT IS LEFT TO YOU**

**If Rexall Kidney Treatment Does Not Do As We Say It Will, It Costs You Nothing.**

We recommend Rexall Kidney Treatment, and put back of it our personal guarantee that it will relieve you or money back.

There is no sting to this guarantee. There is no catch in it. We make our statement as strong as the English language will permit us to, because we have faith in Rexall Kidney Treatment, because we believe it will relieve and help any sufferer from any form of Kidney ailment, and because we don't want your money if it fails. We leave it all to you. If it doesn't help you, just tell us, and the money you paid for it is yours.

We know that Rexall Kidney Treatment has helped scores of others to whom we have sold it. So far we have not received a single complaint, but, on the contrary, many have thanked us for telling them about it.

You know we couldn't afford for one minute to guarantee Rexall Kidney Remedy if we didn't honestly believe it would relieve you. In addition to the loss of the money, we would lose the confidence of our customers if we didn't have in Rexall Kidney Treatment a remedy that will back up our claims for it. The risk is ours. Rexall Kidney Treatment costs, in liquid form, 50 cents and \$1.00. In pill form, 50 cents. Sold in this community only at our store, The Rexall Store, Wey Drug Store.

**THE TAMPA CONVENTION AND WHAT IT MEANS.**

On Monday and Tuesday, February 7th and 8th, there will be held in the city of Tampa a Cattle Conference. At this important meeting there will be present men from many sections of the United States and several foreign countries, who are interested in the growing of live stock.

As the commissioner of agriculture of Florida, I have given special attention for two years to farming and stock raising. This campaign started with one hundred letters addressed to the various stock (cattle) exchanges, individuals and companies, and to stock journals, in which letter was set forth the advantages of Florida as an agricultural and stock raising state. I made the statement that Florida could easily be made to support ten million head of cattle on her ranges, and that the cattle should be finished for slaughter at home; that it was a crime to send the cattle from the state to be finished for the market. I also stated that live stock of all kinds could be raised as cheap in Florida as in any country in the world, and I am sure the claim is not overdrawn.

To impress upon the people of Florida the importance both of this question and the convention as well, the following statement of the work of the state department of agriculture is offered:

During the month of December alone, there were 1,550 packages of matter mailed out of the agricultural and immigration division of this de-

partment. Of the above 1,045 packages related to live stock production and kindred subjects; 505 of these packages covered general questions of agriculture and horticulture. These packages contained 13,950 pieces of mail matter covering a little more than 30,000 subjects.

Of the 1,550 packages above referred to, 362 packages aggregating 3,258 pieces relating to live stock possibilities in Florida were mailed direct to persons who will be present at the Tampa convention. These people alone represent twenty-four states of the Union and one South American country.

I believe this will be the greatest convention ever held in this state. When these hundreds of people see what Florida has to offer the farmer and stock raiser it will not be long when many millions of dollars will be invested in these industries.

No county in Florida can afford not to be well represented at the Tampa convention.

W. A. McRAE,  
Commissioner of Agriculture.

**SOME REMARKS ON EXHIBITS.**

By a stranger: "I have attended a number of fairs this season; am just from the Volusia county fair, at DeLand, but this is the best yet."

"The most beautiful pyramid of fruit I ever saw," having reference to the exhibit of fruits made by G. S. Hollingsworth, and which was admired by all.

"Did not know that such hogs are to be found in Florida. The blue grass region of Kentucky has none better than some I have seen here."

"Some of the finest hand painted chinaware I ever saw in all my life. Don't fail to send this to Tampa, for it is positively unbeatable."

"Prof. Kards, are you willing to make affidavit to the fact that this bird box was made by a six-year-old boy?" Referring to a small box made by Thomas Gaskins, Jr., 3rd, age 6, and which had every appearance of having been made by a master.

"I have seen many fine gilts, but that is the best one-year-old I ever saw," referring to one that was beautiful in form and of unusual size, exhibited by Mrs. Grosvenor, of Murrell.

"Egplants! My! My! Only eighteen required to make one full crate! I never saw the like before, and I have seen thousands of crates," referring to a crate of eggplant grown by F. T. Perkins, of Punta Gorda.

"Who grew that turnip and that rutabaga? My!" The turnip weighs 10 1-2 pounds and the rutabaga 9 1-4 pounds. Sold by a gentleman while

looking over a vegetable exhibit by Tom Budd, of Arcadia.

"I thought I had seen fancy bright grapefruit before, but this is the first I ever saw," speaking of a box of extra fancy exhibited by F. D. Thompson, of Charlotte Harbor.

"No wonder so many strawberries can be grown on an acre when that one plant by actual count shows 112 small berries and bloom." This remark was made when examining a plant exhibited by P. Roehl, of Arcadia.

"Away ahead of Alachua county in domestic science and manual training in the schools," said by a prominent citizen of this county, in which is located the State University.

"An article well worthy the efforts of a master mechanic," referring to a costume made by J. A. Simmons, a fourth grade, 10-year-old student in the DeSoto County High School.

"That display of the students of the art department of Miss Rose Cox is worthy of a place in the best amateur displays to be found anywhere."

"The display of the domestic art department of the Hull public school is as good as I have seen anywhere in the graded schools of the state." Remarks made by a teacher of wide experience in referring to the exhibit of a one-room school in DeSoto county.

Several ladies were admiring a handsome porch swing made by John Whidden, 16, of the DeSoto county high school, and which was a gem. One of them remarked, "What kind of effort would Papa, Carl, make towards constructing a swing? He ought to be, and no doubt is, proud of that boy."

"The poultry and live stock exhibit would be creditable in any national exhibit," Remarks made by a gentleman who has seen the best of the country, and who is a connoisseur in such matters.

"If Florida can raise the kinds and quality of hay as seen here, why should there be so much of it shipped in from other states?" Farmers, plant more hay.

"I think that is the best pair of Bronze turkeys that I have ever been my privilege to see," said by a lady when looking at a pair exhibited by Saxon Bros., of Brownville.

**CONSERVE FARM PRODUCED POTASH.**

The greatest difficulty ever experienced in the state is being encountered this year in the potash famine. The price of commercial potash has gone so high that it is prohibitive for the average farm crops.

P. H. Rolfs, dean of the University of Florida College of Agriculture, calls attention to the large amounts of potash that are wasted annually on the farm. If these wastages of past years could be gathered and used conservatively there would be enough to supply every need of the state for this year. The ashes on the farm contain a large amount of potash, which at the present high price is well worth saving. It is probable that the ashes from the ordinary fireplace would average somewhere around 1 per cent. of potash, according to the dirt they contain. Instead of wasting this potash place it on the fertilizer pit.

Farm animals feed on a large amount of forage. This is digested, and the organic matter that goes to make up fat and muscle is taken out, while the larger portion of the mineral matter is voided. By taking care of the manures produced on the farm considerable potash would be saved, but by allowing the ashes and the manure to lie out in the rain and leach they become quite worthless as fertilizer. A number of farmers in the state appear to have anticipated the present difficulty and have grown leguminous crops and saved manures, so that in this time of potash famine they are in much better position to withstand the difficulty than those who have not conserved these fertilizers.

It is reported that William Jennings Bryan may be a candidate for the United States senate to succeed Senator Hitchcock. We have not been quite as enthusiastic in favor of this gentleman within the past few months, but if he wants to go back to congress we are for him. He is a good man and wants to do right, and these characteristics are not possessed by all United States senators.

**OATS SHOULD BE CULTIVATED.**

Oat fields will need some cultivation this spring. The soil will be found packed after the winter rains, and crusts will have formed. Oats require plenty of moisture, and since the crusts facilitate evaporation, they should be broken.

E. S. Pace, district agent for the University of Florida Extension Division, suggests that a weeder be run over the field. This precaution is especially valuable after a spring rainy

season. On heavier soils a spring tooth harrow with the teeth slanted back, may be used, but for light sandy soils it is too heavy.

Mr. Pace has been advising the treatment for several years. In many instances he has suggested leaving a strip in the field where the crust was not broken. In every such case there has been a marked difference in the growth and yield of grain. The treatment conserves moisture and facilitates soil warmth.

**Meffert's Trowel Brand Lime Both Good and Dependable**

Good because it aids fertility, making fruit trees and other crops much more healthy and vigorous, assuring increased and improved crop yields of the best quality. Dependable because of its purity—analysis nearly 100 per cent carbonate of lime—and also because produced by a concern of twenty-three years' experience.

**Ground Limestone Hydrated Lime Rock Lime**

There is a form of Trowel Brand Lime for every purpose—soil treatment, dust sprays, etc. All are fully guaranteed. Order Trowel Brand Lime for your grove, or field, or garden. Booklet "Using Lime on Citrus Groves" free. Let us quote prices and send sample.

**Florida Lime Company, Ocala, Fla.**  
Successors to the original Ocala Lime Company

**NATURE'S SOIL BUILDER**

Blowers' Ground Limestone makes acid soils sweet. It releases potash salts and imparts strength and vigor to growing crops and trees. Blowers' limestone ground unusually fine readily mixes with the soil. Contains no impurities—can be applied at any time—is inexpensive. Write for literature and prices.

335 NORTH BREVARD AVE., ARCADIA, FLA.

Here the coming mother has the very best of care, all necessities furnished, the expenses we will share.

Any questions gladly answered.

**Finely Ground Natural Phosphate**

**NATURSOWN FOR PERMANENT SOIL FERTILITY NATURSOWN**

When you are sick and send for a doctor you expect his medicine to *restore* your health as well as *relieve* your pain. If you make an investment you do not consider it a good one unless it yields a fair dividend as well as protecting its principal.

Why put the fertilizer of your groves and fields on a purely temporary basis? Why be satisfied with an increasing yield of one or two crops with no permanent addition to the fertility of the soil?

You can grow just as good crops, at much less expense for fertilizer, and at the same time gradually improve the soil for future yields.

**Why Not Use Fertilizers That Build Up the Land As Well As Increase the Immediate Crop Yields?**

Natursown, finely ground natural phosphate, supplies phosphorus in combination with lime in such form as is readily made available by the methods of cultivation used by any up-to-date fruit grower and farmer.

Natursown will give just as good immediate results as the more expensive commercial fertilizers and will leave in the soil a supply of plant food for subsequent seasons. Used for a few years in succession, it will build even a poor soil into a productive one.

Natursown is not an experiment. It has demonstrated what it can do. We have the facts and figures to substantiate all our claims. Let us place these in your hands before you buy your fertilizer for the season. A postal card request will bring you our booklet and full information.

**Lakeland Phosphate Company**

Seminole Avenue  
Lakeland - Florida

ORDINARY FERTILIZERS—  
one year's crop and nothing more. No permanent fertility added to the soil

NATURSOWN—just as much increased yield the first year, and available plant food left in the soil
