

THE NEW TREATMENT FOR SOUR STOMACH

Cuts out soda mints and chalk so extensively used in the old-time "dyspepsia tablets." They are too harsh for even strong stomachs, and often do harm if continuously taken. Dys-pep-lets are made by experts who understand these things and have combined the best stomach remedies known to physicians—pepsin, bismuth, mint, rhubarb and other carminatives, and correctives—into delicious tablets that not only look good but taste good and do good. They quickly relieve sour stomach, nausea, indigestion, heartburn.

POWNAW

Daniel Colwell has resigned his position with the Pownal Lime Co. Duane Manchester of Hoosick Falls N. Y., was a visitor in town Monday. Richard Kately and son of Blackinton were guests of C. C. Kately Sunday.

Arthur Barnard of North Adams, Mass., visited Elmer Rathbun Sunday. George Rowland of Buffalo, N. Y., is staying at his aunts, Mrs. A. M. Proud.

Miss Blanche Brown of the North Adams hospital was at her home here Sunday. John Kimball of Bennington visited his sister, Mrs. Clinton C. Kately Sunday.

UNEMPLOYMENT OF EMPLOYERS.

One of the best things that have been said regarding the business situation in the United States was said by President William Sprague of the Southern Pacific in his recent address at the annual dinner of the Trade Club of Chicago. He remarked that the "industrial depression through which we are passing is chiefly due to lack of confidence produced by indiscriminate attacks on business men and business concerns." He added, "It is the employer who is first out of employment. As a natural sequence he is followed by the employee who next finds himself out of work. Unemployment begins only when the employer himself becomes unemployed."

The gist of the whole matter is in the last sentence, is the comment of the Railway Age Gazette. Labor becomes unemployed only when the employer becomes unemployed. On the other hand, when the employer is fully employed labor is also. Bearing these facts in mind, the remedy for present conditions becomes obvious. It is to give employment to the employer. Who is the employer? He is the man with capital to invest. Therefore, to get him employed it is necessary to furnish him good opportunities for the investment of his capital. There is no want of idle capital. There is a glut of it.

Prosperity can be restored and maintained only by the activity of business men the Railway Age Gazette continues. We have been acting on the assumption that government activity makes prosperity; and that is the main reason why the employer and along with him the employee, have been so long unemployed.—Burlington News.

EARLY RISERS The famous little pills.

The evening of life is the good morning of an annuity 96th year. National Life Ins. Co. of Vt. (Mutual) Earle S. Kinsey, General Agent, Mead Building, Rutland, Vt. Adv.

State of Ohio, City of Toledo, ss. Lucas County.
Frank J. Cheney makes oath that he is senior partner of the firm of F. J. Cheney & Co., doing business in the City of Toledo, Ohio and State of Ohio, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of Catarrh that cannot be cured by the use of HALL'S CATARRH CURE.
Sworn to before me and subscribed in my presence, this 9th day of December, A. D. 1886.
A. W. GLEASON, Notary Public.
Hall's Catarrh Cure is taken internally and acts directly upon the blood and mucous surfaces of the system. Send for testimonials, free.
F. J. CHENEY & CO., Toledo, O.
Sold by all Druggists. Take Hall's Family Pills for constipation.

HEAT OF OUR SUN

To Measure It Is a Perplexing Problem For Science.
NEWTON ONCE TRIED TO DO IT
He figured it at the Amazing Intensity of 1,669,300 Degrees Centigrade, While the Latest Estimates Place it at About 6,500 Degrees.

How hot is the sun? The question has been answered in many different ways, and it is by no means certain that we have yet arrived at an even approximately accurate answer. Yet it would seem that, as the sun is the only source of the earth's heat, and as we know the exact distance of the sun, it ought to be easy to calculate and apply the law of the square of distance, as announced that the sun's heat was 1,669,300 degrees C.

In 1837 Sir John Herschel and Pouillet devised special instruments for measuring the solar heat, but at the very beginning disagreed on a fundamental question. Pouillet wanted to estimate that the earth's atmosphere cut off half the sun's heat; Herschel insisted that it cut off only one-third. Herschel reached the conclusion that the sun's heat was two calories per square centimeter per minute. Pouillet calculated it at 1,7633 calories per square centimeter per minute. This means that the sun's rays falling vertically upon each square centimeter of the earth's surface would be sufficient to power, if it were not for their absorption by our atmosphere, to raise 1,7633 grams of water one degree C. per minute. This number is what astronomers call the solar constant.

Pouillet's figures, 17, were generally accepted until recently. Forbes by experiments at the top and at the base of a high mountain calculated that 2.85 was the correct number. Vielle made it 2.54, and Crova asserted that it was certainly superior to two calories per square centimeter per minute. The American Langley invented the bolometer, by means of which he measured the intensity of each ray by the length of its wave before entering our atmosphere. This he proved that the rays of shortest length are those that are most absorbed. It is as if we placed two red glasses between ourselves and the sun, one representing the sun's atmosphere and one representing our own.

The Abbe Moreux, director of the Bourges observatory, declares in an article in Cosmos that if these two atmospheres were eliminated and he could see the sun as he really is he would appear to be a brilliant greenish blue. Langley's calculations placed the solar constant at about three. He proved that scarcely 60 per cent of the sun's rays penetrated to sea level. Other observers obtained other figures, and at the beginning of this century the tendency was to return to those announced by Herschel and Pouillet.

It is certain that the earth intercepts only about one two-billionth part of the actual heat of the sun, but if we adopt Langley's figure, 3, we find that the fraction of heat received would be sufficient to melt annually a layer of ice 222.75 feet thick at the equator of the earth. The average power received from the sun over the entire earth is equal to 154,404,000 kilowatts or a year, or one continuous horsepower for every 1.72 square meters.

The greater part of this heat is used up in keeping the earth warm; but, according to Helmholtz, about a thousandth part of it is absorbed by animals and vegetables and becomes an abundant reserve of energy for the human race. If we accept the more recent figures, which are the result of the calculations of Messrs. Abbott, Fovle and Aldrich at the Smithsonian Institution in Washington and call the solar constant two calories per square centimeter per minute, the results are scarcely less striking.

If the total heat could be applied to a block of ice at 0 degrees C, as thick as the earth—8,000 miles—this would be entirely melted in a quarter of an hour. All the water thus obtained would be turned to steam at 100 degrees C. 117 minutes later, the whole operation from ice to steam having taken only two hours and twelve minutes.

The most recent estimate of the temperature of the sun's surface is between 6,000 and 7,000 degrees C.—New York World.

Hotel Gregorian,

35th St. Near Broadway, NEW YORK CITY.

BENNINGTON BRIEFS

News of the Town and Village Told Briefly for Busy Readers
Mrs. Helen B. Hawks, who has been ill of the grip, is improving.
H. M. Ritchie has returned from a business trip to New York.
Miss Eva Theberge of Dewey street who has been ill several weeks does not improve.
Mrs. F. H. Ferguson of Booth Terrace, who has been seriously ill, continues to improve.
Mrs. Mary Forgie is spending the day with her mother, who is in the city hospital in Troy.
New spring stock arriving daily at the New York store. Latest goods at lowest prices. Adv.
Andy Churchill of Bristol, a former resident who has been visiting in town, has returned home.
Rev. T. R. Carty, pastor of St. Francis de Sales church returned Friday night from a several weeks southern trip.
Dr. J. H. Cole has purchased of Miss Gertrude Evans the Evans property on South Branch street and will reside there.
Mr. and Mrs. Philip B. Jennings came up from New York Friday to pass a few days at their Old Bennington home.
Guy B. Johnson and family who have been spending some time in Boston expect to open their home at Old Bennington in about two weeks.
Hamilton Shields and Elizabeth Shields of Old Bennington went today to Troy to visit their uncle James A. Eddy.
Mr. and Mrs. Arthur Chase of Worcester, Mass., former residents, are visiting Mrs. Chase's mother, Mrs. Ella Peckham.
Frank Riley, George Jasperson and Albert Carter of the U. S. army, who have been passing a ten days furlough in town, have returned to their posts at Fort Ethan Allen.
Mr. and Mrs. Harry Tinker of Albany are visiting Mr. Tinker's cousin, Charles Lockwood. Mr. Tinker is one of the auditors of the Armour Co.
Alonzo Bent, who has been visiting his daughters in Thomaston, Conn., has returned home for a few days after which he will return to Thomaston.
Miss Katherine Dunham gave a party Friday evening at the home of her parents, Mr. and Mrs. Harry Dunham of Haynes corners. Most of the guests were teachers in the rural districts. Refreshments were served.
An attempt was made Friday to put in a new glass in the door at the Harwood drug store which was broken at the recent fire. The sheet of glass broke while being cut and another had to be ordered. The most serious loss sustained by the proprietor was that of between \$40 and \$50 worth of cigars and tobacco that didn't burn until the fire was all out.
The street commissioner put the street cleaner at work shortly after midnight this morning and gave Main street a thorough cleaning, particularly on the north side where the dust was beginning to fly. The sun does not strike the south side of the street only a short time during the day and the ice will hold on there until the weather moderates.
"The Little Cafe" company, which is one of the largest musical comedy companies ever to appear at the opera house, arrived this afternoon from Rutland. Manager Wood says this company takes more men to handle it than any other he has ever booked. Besides the ten property men with the show 14 local electricians and 30 clear eyes to assist in working the show are required. The company goes from here to North Adams and therefore will probably remain in town over Sunday owing to the difficulty in getting the baggage taken care of on Sunday.

GOOD ROADS MONTH

Arranging With Boards of Trade to Further the Movement.
Boards of trade in the shire towns of most of the counties of Vermont are arranging for "Get-Together" luncheons at which State Highway Commissioner Bates, the county supervisors, the selectmen and the road commissioners of the towns on the days of their county conferences will have an opportunity to meet the business men of the counties and thus to secure larger interest and co-operation from citizens in their work of maintaining and improving the roads of Vermont.
State Highway Commissioner Gates wrote this of the results of the meetings last year: "I consider that one of the best moves that you have made, and feel and know that the feeling of co-operation is stronger in practically every county where the experiment was tried. In fact, it has given our work a standing in the minds of business men that has been a help to us during the year. I think the Boards of Trade properly organized and working along these lines can do a great deal in awakening an interest among the business men and in fostering a spirit of co-operation that is absolutely necessary to make our road scheme in Vermont a success."
