

VIEW OF THE FAMOUS SUNNYSIDE CANAL, SHOWING BRIDGE BETWEEN SUNNYSIDE AND GRANGER. This canal, which was built by the Washington Irrigation Company, of which Mr. E. F. Blaine, whose picture appears on the cover of this issue, is general manager, waters many thousands of fertile acres of land in the Sunnyside Valley.

YIELD OF POTATOES ON THE LAND UNDER THE SUNNYSIDE CANAL. Sunnyside is one of the most prolific potato countries in the West. The yield, to one who has never seen these wonderful crops, is almost beyond belief. Notice the size of the potatoes. This is not an unusual yield for the Sunnyside.

A TRACT OF RICH, PRODUCTIVE ALFALFA LAND IN THE SUNNYSIDE. The low lands in this section are especially well adapted to alfalfa growing. Four crops of alfalfa hay are not unusual in one season. The yield per acre often runs as high as from six to seven tons.

FAIR SUNNYSIDE The Land of Luscious Fruit

PROBABLY there is no country in the West whose wonderful progress has been more widely exploited during the last few years than the great and fertile Sunnyside country. This advertising has come to the country not only through the energy, enterprise and patriotism of the citizens, but also because the great accomplishments of the country in an agricultural and horticultural way, have had actual news value in the newspapers, and people have heard about Sunnyside far and wide through its actual merits and because such big things were being accomplished that the light could not be hidden under a bushel basket.

Properly speaking, the Sunnyside country is in the Yakima Valley, because this is a name given to a great section of rich agricultural lands in that vicinity. And while it is true that Sunnyside is a district all by itself, nevertheless it is also a certainty that all that people have read of the great richness and productivity of the wonderful Yakima Valley, applies in fullest sense to the Sunnyside country.

Here are located some of the most famous agricultural lands in the Northwest, land that for its production per acre and its never failing crops has not an equal in the country. Most of the land is irrigated and produces with the

well known prolific abundance of the Washington irrigated lands. The land that is not under ditch however, is not useless by a long ways, but grows splendid crops of wheat, other grains and unusually large crops of potatoes. The principal products of the rich irrigated lands are apples, peaches, pears, prunes, apricots, cherries, grapes, strawberries, all bush berries, potatoes, hops, alfalfa, timothy, onions, melons, English walnuts and other crops, all of which are exceedingly

ONE CLUSTER OF LUSCIOUS Some of the finest grapes that reach the markets are shown at Yakima and at Sunnyside. The present picture shows Roy Lichty are shown in the picture holding the
