Cut Your Harvesting Costs

When your grain is ripe you ought to hustle to get it harvested. With a Caterpillar Tractor hitched up to a Holt Combined Harvester you can do the job quicker and easier than in any other way. Such an outfit will cut and thresh 30 to 50 acres a day with five men and no horses, for 50c to \$1.00 an acre.

Reg. U.S. Pat. Off.

The Caterpillar has abundant power. It easily hauls a harvester over steep hillsides where horses can hardly work—and it does it steadier than horses can. The Caterpillar is built low. You cannot upset it on any hills that you can farm profitably. It costs less to maintain than a big camp of horses. It is always ready for use. It is never affected by hot weather, never makes long stops to feed, wastes no time in being hitched up, works 24 hours a day if necessary.

With a Caterpillar you can safely harvest on any soil. The long, wide Caterpillar tracks distribute the weight and take a good hold even on loose or wet soil—this feature means a great deal in volcanic soils where horses and round wheel tractors have so much trouble.

For use with the Caterpillar or animals, we build three sizes of side-hill harvesters, either ground-driven or equipped with a gas motor. They are made to meet the actual difficulties you encounter in side-hill work, and they operate just as well on level ground.

We have dealers in your neighborhood who carry stocks of repair parts. We also maintain a free service department for Caterpillar owners. Expert tractioners travel through the country advising as to minor repairs and making suggestions for the efficient use of the Caterpillar.

Ask our nearest branch for Caterpillar Catalog B I 63 or literature on Holt Harvesters.

Everything for the power farmer—harvesters, disc and moldboard plows, harrows, scrapers, supplies and lubricants.

For Sale in every Town or by the
KORINEK VETERINARY REMEDY CO.
MEDFORD, OREGON, U. S. A.

The World's Closest Skimmer!
That sounds like a pretty strong statement, my boy, but it's true! The Great Western has proven it for years by competitive tests with other machines. It's true because

Great Western Cream Separators

skim according to nature's law—cream from the top, milk from the bottom. Successfully skims cold milk. No waste—the self-flushing and draining bowl skims every drop of milk that enters it. Low tank—high crank. Easiest to run—easiest and most simple to clean. Thousands of Great Western users report a gain over inferior machines of at least 180 pounds of butter-fat a year, from ten average cows. At 25c a pound, that's \$45.00. Write us today for big FREE Great Western Separator Book. No obligation. Mention your dealer.

Princess Bessie Aaggie Cornucopia 183982: Milk 281.7 lbs., 3.67, fat 10.329 lbs. B. F. Huggins, North Yakima, Wash.

400,000 Settlers a Year

Immigration figures show that the population of Canada increased during 1913, by the addition of 400,000 new settlers from the United States and Europe. Most of these have gone on farms in provinces of Manitoba, Saskatchewan and Alberta.

Lord William Percy, an English Nobleman, says:

"The possibilities and opportunities offered by the Canadian West are so infinitely greater than those which exist in England, that it seems absurd to think that people should be impeded from coming to the country where they can most easily and certainly improve their position."

New districts are being opened up, which will make accessible a great number of homesteads in districts especially adapted to mixed farming and grain raising.

For illustrated literature and reduced railway rates, apply to

Supt. of Immigration, Ottawa, Canada, or to the Canadian Government Agt.
