

## MRS. WILLIAMS' LONG SICKNESS

Yields To Lydia E. Pinkham's Vegetable Compound.

Elkhart, Ind.:—"I suffered for four-teen years from organic inflammation, female weakness, pain and irregularities. The pains in my sides were increased by walking or standing on my feet and I had such awful bearing down feelings, was depressed in spirits and became thin and pale with dull, heavy eyes. I had six doctors from whom I received only temporary relief. I decided to give Lydia E. Pinkham's Vegetable Compound a fair trial and also the Sanative Wash. I have now used the remedies for four months and cannot express my thanks for what they have done for me.

"If these lines will be of any benefit you have my permission to publish them."—Mrs. SADIE WILLIAMS, 455 James Street, Elkhart, Indiana.

Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs, contains no narcotic or harmful drugs, and to-day holds the record of being the most successful remedy for female ills we know of, and thousands of voluntary testimonials on file in the Pinkham laboratory at Lynn, Mass., seem to prove this fact.

If you have the slightest doubt that Lydia E. Pinkham's Vegetable Compound will help you, write to Lydia E. Pinkham Medicine Co. (Confidential), Lynn, Mass., for advice. Your letter will be opened, read and answered by a woman, and held in strict confidence.

## CARE NEEDED IN OPERATION OF PRUNING

Correct Pruning Results in Fine Trees Like This Baldwin Apple in Bloom

(By W. M. KELLY.) Pruning apple trees may be done any time from late fall until spring. Care should be exercised in pruning to give the trees an open head.

This does not imply that all small side limbs should be removed, leaving a lot of whips, but that such of the largest limbs that are parallel and close together, or those that cross, should be cut out. Half of the difficulty of pruning is avoided if one decides to allow the tree to take its natural turn rather than to shape it to some particular model.

Too many fruit growers think that pruning a tree shortens its life. There is little reason for such a belief other than the general statement that it is

unnatural to prune a tree. However, nature prunes more heavily than men at all seasons and in the rudest manner.

By this it should not be understood that care is not necessary in the mechanical operation of pruning. It is important that large limbs be removed with great care and the wounds painted to prevent the entrance of fungi which will induce decay.

Avoid all croches that will have a tendency to split down or break when the trees become loaded with heavy fruits, or sleet and ice. If bad croches cannot be avoided they should be strengthened with iron bolts to prevent them from breaking and ruining the tree.

## INJURIOUS WORK OF A SHOT-HOLE BORER

At Left, Openings in the Bark Through Which Insects Escape—At Right, Burrows as They Appear When the Bark is Removed.

(By W. O'KANE.) The first evidence that usually comes to the orchardist indicating the presence of the shot-hole borer in his trees is the dying back of limbs; or the weakening or death of whole trees. As the tree is examined, it is found that the bark is peppered with tiny, round holes, each one not more than the twentieth of an inch in diameter. It is from this characteristic sign that the pest gets its name.

Sometimes the numerous tiny holes are seen in the bark of apparently healthy trees, and in such cases there may be little drops of gum at each hole. This is especially true where peach, plum or cherry are attacked, because of the propensity of these trees to bleed when injured. But if, as is often the case, the tree is weakened or dying when examined, there will be no gum and each hole will be clean cut.

Each of the little round holes represents the point at which an adult beetle cut its way out from the sapwood, where it has been going through part of its life cycle as a small grub. By removing a piece of the peppered bark the characteristic burrows of the grubs will be revealed. It will be found then that there is a short main

channel usually an inch or so long, and running more or less in the same direction as the grain of the wood. From each side of this a number of small channels lead off at right angles, gradually enlarging and diverging, and finally wandering about, to end suddenly in a round cell.

The beetles begin cutting their way out fairly early in the spring and soon afterward the females are at work making the brood chambers and laying eggs. In the South there may be four generations in the course of the summer; in the North, probably only three. The last generation remains within the burrows until the following spring.

This makes clear the principal means for fighting these pests—to watch sharply for evidences of their work, and at once cut out and burn the limbs or branches attacked. If an entire tree is infested and dying, it should at once come out and be burned. Too much emphasis cannot be placed on the burning of such trees and limbs. If a limb or branch is cut down and is left lying on the ground, the damage may readily be increased. Burn every part of a tree infested with the shot-hole borer and keep the orchard clear of rubbish.

## MUCH ADVANTAGE IN FEEDING OF ROOTS

They Push Ewes Easily and Naturally to Strong and Healthy Flow of Milk.

The use of roots is productive of great good to the ewe flock. They are succulent and start a natural milk flow, whereas grain naturally goes more to producing flesh and fat.

There is no danger of the ewes consuming too many roots. They push her easily and naturally to a strong flow of milk that has very healthy properties.

Ewes highly fed on grain often give milk that is injurious to their lambs. Of this there is no danger when roots are substituted in large part for the grain.

The shepherd who can readily grow roots has a distinct advantage over the one who relies upon dry hay and grain for wintering his ewe flock. Most of the best developed sheep, the ones seen at our fall shows, come from root-growing regions.

## TRUE FOUNDATION OF THE DAIRY COW

Breed Is Simply Care, Food and Environment—Coax Young Calf to Drink.

The feeding of the mother who must nourish and build up the frame and give constitutional vigor to the young calf, is the true foundation of a dairy cow, yet the average dairyman feeds his pregnant cows the refuse of the farm.

Nature's rigid statutes have proved that breed is simply care, food and environment, followed through successive generations, aided by careful selection, until an improved type is produced.

Coaxing a calf to drink is easier than pushing its head into a pail and holding it there. When we wet the fingers and coax its head into the pail, it will soon drink of its own accord.

More milk to the acre and not more milk to the cow should be the aim of the successful dairy farmer. A cross-bred cow is a mistake.

The candy export figures from this country prove it. Europe curtailed the bean supply of the United States when Austria's exports were stopped. Now America has retaliated by reducing the quantity of candy sent to the old world.

The first five months of the war caused a decrease of \$153,823 in value of candy exports from the United States, as compared with the same period of the year before. The value of the total exports of candy for the calendar year was \$1,185,894.

## Canada is Calling You to her Rich Wheat Lands

She extends to Americans a hearty invitation to settle on her FREE Homestead lands of 160 acres each or secure some of the low priced lands in Manitoba, Saskatchewan and Alberta.

This year wheat is higher but Canadian land just as cheap, so the opportunity is more attractive than ever. Canada wants you to help to feed the world by tilling some of her soil—land similar to that which during many years has averaged 20 to 45 bushels of wheat to the acre. Think what you can make with wheat around \$1 a bushel and land so easy to get. Wonderful yields also of Oats, Barley and Flax. Mixed farming is fully as profitable an industry as grain growing.

The Government this year is asking farmers to put increased acreage into grain. Military service is not compulsory in Canada but there is a great demand for farm labor to replace the many young men who have volunteered for service. The climate is healthful and agreeable, railway facilities excellent, good schools and churches convenient.
