

Buy an Up-To-Date Low Corn King Spreader

PLEASE note that in the Low Corn King the box is narrow—only 45 inches in width. The Low Corn King can be driven into a modern barn and loaded directly from the stable. That saves work.

The spread is eight feet or wider. That shortens the unloading time. The manure is thrown well beyond the wheels. That enables the driver to match up the edges of his strips without driving on manure-covered ground. You know what a big advantage that is.

The manure gets two thorough beatings. It lands on the ground in a finely-pulverized condition. The soil immediately takes up the fertilizing properties. There is no loss or waste of valuable fertilizing material.

Buy an up-to-date, wide spreading Low Corn King spreader from the local dealer.

International Harvester Company of America
(Incorporated)

Low Corn King spreaders are sold by

Jas. Cogleys Sons, Yale, Mich.

When You're in Town

--don't pass by our store without coming in and trying on some of the

Smart New Suit Models

which are arriving daily. Our buyer, just returned from Eastern markets, secured large consignments of suits at a special figure, as this is "late season" in wholesale garment circles. But there are no samples or "job" lots among them—they are a part of the regular stock of the makers of one of our permanent lines. So you can depend upon them for quality and style. We offer them to you at the height of the "dress up" season at

Prices That Save Money for You

You'll find it decidedly worth while to pay us a visit.

Knox Dry Goods Company

Port Huron, Mich.

SATISFACTION—Your "buy-word," our selling policy.

Late Grain Seeding

means a lot of land which may not be planted. Beans suggested as about the best crop possible for Thumb farmers to raise. The Great War means Europe will import a lot of Beans. Michigan Beans are the only kind which will can successfully.

Plant Good MICHIGAN GROWN Seed

We have arranged with Mr. Thomas Wharton to take orders of NORTHERN-GROWN beans, all on a cash basis. He will show you samples and order the goods for you. Ask him for the little pamphlet on

"Michigan Beans and How to Grow Them."

House and Lot for Sale

Seven room house, cellar underneath, good barn, buggy house, coal and wood shed, cistern, well of pure water, located in northern part of city. Want to sell inside of ten days. Inquire of Ed Sheehy, Yale.

Try an Expositor Lister.

Who wouldn't be a farmer? There is just one trouble, only the farmers know how to farm. There are thousands who would like to quit the towns and cities and emigrate to the country and possess themselves of broad fertile fields and proceed to make two blades of this, that or the other grow where one or none grew before. It takes from two to twenty years to learn how to farm (some folks never learn) and within such a period bankruptcy might occur several times over. But if all of us cannot be farmers all can admire the hardy-handed sons of toil and rejoice with them in their present great prosperity. They are the bulwark of the nation and the salt of the earth.

EAST KENOCKEE.

Services at the Allen church next Sunday at usual hour. Sunday school after services.

Mrs. Alvin Morgan, who has been quite ill at her home here with inflammation of the nerves of her right side, is slowly improving. Her mother, Mrs. Perrin, is taking care of her, with Dr. Wight of Yale in attendance.

Clifford Perrin and wife, of Detroit, visited A. B. Munro and A. Morgan last Saturday.

Mrs. J. Reid and daughter Isabel were in Port Huron Saturday last calling on Mrs. J. Brintnell who is ill at the hospital.

T. Perrin and wife were callers at Mrs. O. Wixon's west of Avoca last Sunday. Mrs. Wixon is quite ill.

The eighth grade examination will be held in Port Huron on Thursday and Friday of this week.

Mrs. J. E. Green and Mrs. Alex Green spent Thursday in Port Huron.

J. Barham and wife were in Zion Saturday visiting the latter's daughter, Mrs. May Gardner.

T. Perrin and wife were recent guests at the home of Mrs. D. Hubel in Zion.

H. A. Munro and wife, of Port Huron, spent Sunday with relatives here. They will leave this week for Detroit and reside for a time.

Percy Bradley, of Greenwood, spent Tuesday with G. Menzies.

Mrs. Alex Balmer returned from the Port Huron hospital last Saturday very much improved in health. Her friends here are pleased to hear of her recovery.

Mike Alluin and Melvin Dunn, of Detroit, spent Sunday at their parental homes.

Mr. Draper is entertaining his father of Capac.

Scientific Farming

A STAND OF RED CLOVER.

Practical Information About How to Secure It.
(Prepared by United States department of agriculture.)

The area in red clover is much less than it should be, and it appears to be growing less all the time. The cause of the decline is to be found in the increasing difficulty in getting a stand and in keeping it. When a farmer fails to get a catch of clover he loses not only his time and the money spent for seed, but also the anticipated benefit to the land and the hay crop the next year. The only way to minimize this loss is to make the conditions as nearly perfect for clover as they can be made. A strong plant may survive weather conditions that will kill a weak one.

Clover delights in a relatively cool, moist climate and in a fertile loamy soil containing plenty of vegetable matter, lime and phosphorus. Of course these conditions cannot always be realized. One of the chief uses of clover is to improve the soil, and farm-

RED CLOVER SEEDING IN CORN.

ers are entitled to expect clover to grow at least reasonably well on soils the fertility of which they wish to increase. It is, however, a mistake to suppose that clover will grow on any soil no matter how much we plow. There are certain things that clover demands, and the most important are a good supply of lime and phosphates.

The clover plant is healthier when there is plenty of lime than when the soil is sour, and being healthier the young plants will withstand a dry spell better, and the old plants will come through the winter better than plants growing on sour soil. To sow red clover seed on so called acid soils is usually to waste time and money.

The addition of phosphates has also been found to be very beneficial, but here again there is no way to tell how much is needed without trying. If clover has not done well on a farm the need of lime or phosphorus or perhaps both is indicated, and the farmer would do well to buy a bag or two of ground bone or of superphosphate and a ton of fine ground limestone and apply separately or in combination to a part of the field. The growth of the clover during the following season will tell the story of the needs of his soil. The bone-meal and phosphate may be applied at the rate of 200 or 300 pounds per acre.

On sandy soils potash may also be needed. For the healthy growth of the clover plant, then, lime, phosphorus and potash must be present; the presence of nitrogen is of minor importance, though of course the young plants will do better if nitrates are available. If clover has not been on the land for many years it will be wise to scatter dirt from a clover field or to inoculate the seed with the nitrogen germ. When this is present the clover plant can draw on the nitrogen of the air.

The mechanical condition of the soil must be good; a soil that becomes hard, excluding the air from the roots, will not grow good clover. Lime will help loosen up such a soil, but decaying vegetable matter or humus is the greatest need of such land. This can be furnished in stable manure or by turning under other crops that are not as sensitive as is clover. A soil without humus will dry more readily than one with plenty of vegetable matter, and in a dry season this fact may be all important to the young plants.

Good seed should, of course, be used; even though seed is high in price this year, poor seed is relatively higher than good seed and should never be used. Clover seed is small, and only those seeds can be expected to make plants that are dropped within a half inch or an inch below the surface. This is for the average loam or clay loam soil; in sandy soil a little deeper planting will do no harm.

The important facts that have been brought out by experience are that seed should be covered as uniformly as possible and that the best depth in average soils is between one-half inch and one inch; that drilling saves seed and gives better results than broadcast; that seed sown very early and left lying on the surface is liable to be killed by the frost, and that early fall seeding can be successfully practiced in many places.

Prince Albert gives smokers such delight, because

- its flavor is so different and so delightfully good;
- it can't bite your tongue;
- it can't parch your throat;
- you can smoke it as long and as hard as you like without any come-back but real tobacco happiness!

On the reverse side of every Prince Albert package you will read:

"PROCESS PATENTED JULY 30th, 1907"

That means to you a lot of tobacco enjoyment. Prince Albert has always been sold without coupons or premiums. We prefer to give quality!

PRINCE ALBERT

the national joy smoke

YOU'LL find a cheery howdy-do on top no matter how much of a stranger you are in the neck of the woods you drop into. For Prince Albert is right there—at the first place you pass that sells tobacco! The tippy red bag sells for a nickel and the tidy red tin for a dime; then there's the handsome pound and half-pound tin humidor and the pound crystal-glass humidor with spruce-moose-antler top that keeps the tobacco in such bang-up trim all the time!

in goodness and in pipe satisfaction is all we or its enthusiastic friends ever claimed for it!

It answers every smoke desire you or any other man ever had! It is so cool and fragrant and appealing to your smokeappetite that you will get chummy with it in a mighty short time!

Will you invest 5c or 10c to prove out our say-so on the national joy smoke?

R. J. REYNOLDS TOBACCO CO., Winston-Salem, N. C.

This is the reverse side of the Prince Albert tidy red tin. Read this "Patented Process" message-to-you and realize what it means in making Prince Albert so much to your liking.

..Belmont Casket..

Lead-Coatd-Steel

Under the covering and upholstery of this Casket is a perfect Armor Plate protection for the body. Strongest and most durable of all Caskets. Armor plate steel double coated with pure lead. Tested strength 60,000 pounds per square inch. No glued joints to soak loose in wet ground. Will not swell and burst open like wood. Cannot be crushed by earth nor invaded by animals. Will be found intact in case of removal.
