Very successful, it appears, have been the experiments which for some years have been made with a form of the gyroscope, which is intended to correct errors of the mariner's compass and, in certain cases, such as, for instance, in submarine boats, to replace the compass. The apparatus in one case is based upon the tendency of a gyroscope to retain its axis of rotation in a fixed position the axis is set to correspond with the course of the ship any change in the direction is immediately shown by the rotation of a "rose," or compass card, within which the gyroscope is suspended. Deviations of the magnetic compass are detected by the in-"Mary," said the mistress, "did you strument.
