The stage. The old stage of the past is gone, driven out the march of improvement. The live horse has been supplanted by the iron horse, the picturesque driver by the jolly engineer. Notwithstanding this fact there are thousands of people still anxious to go "on the stage." Why! oh, why don't somebody write a new farce comedy for the stage, one that won't be a rehash of all the ones that have gone before, one that will have a new song that hasn't been sung to death, or a new dance that has never been danced before? Why don't somebody in this day and generation that have run realism to death, this time when real show, real rain, real horses, real cars, real water tanks, real pile drivers and real pugilists are on the stage; why don't somebody write a new Hamlet and use real ham? Speaking of stages, there are several stages used in getting to the front in business. First, the experimental stage; second, the stage of uncertainty; third, the successful stage. We're already riding on the third stage, up on the front seat with the driver, permitted to crack the whip ourselves occasionally. In one year men and women have learned to believe in us, to know that we always give value—good, big value for every nickel that goes into our money drawer—and we don't do it for one day or on and on one line of goods, but we do it every day and on every line of goods we sell.
