

Horse Blankets

AND LAP ROBES.

THAYER'S

124-126 East Washington St. PHOENIX, ARIZONA.

A VOTE OF CENSURE

(Continued From First Page.)

ground that the people of Yuma county, did not agree with the sentiment of the resolution.

Mr. Murphy vigorously supported the resolution, as representing the views of the majority of the people of Arizona.

The resolution was adopted by a vote of 8 to 4.

The resolution came back from the house with the record on the back showing that it had been adopted as amended in the council last Saturday.

Mr. Carpenter called attention to the fact that an amendment to the amendment had been laid on the table, and he asked why it was not so recorded on the resolution.

The members of the council were inclined to make sport of the invitation sent them by the house to attend the woman's rights meeting in the house chamber this afternoon.

Mr. Adams is keeping close tab on legislation in the house affecting corporations, and stirred up the anti's yesterday in an effort to locate the condition of three important measures.

Mr. Williams presented a bill providing for general vaccination of school children.

and savings banks, he said, now amount to \$7,000,000,000.

Prof. Sherwood pointed out the immense improvement of the present system over the former state bank plan, especially in the matter of circulation.

Mr. Eitz presented a bill amending the law in relation to the removal of county seats.

Mr. Beahm introduced a bill fixing the salaries of supervisors of first class counties at \$1,000 per year and no mileage.

In the council, Mr. Hunt presented a bill to protect game, birds and animals.

Mr. Murphy's bill concerning the location of mines, was passed by the council, as was Mr. Bunch's bill, licensing hotels and groceries in small towns.

The bill pensioning Col. Poston was considered in whole committee of the house, which recommended that it do pass.

Dr. George Goodfellow Believes It Was Healthful and Curative.

Dr. George Goodfellow of Tucson, aide-de-camp to General Shafter, was in Los Angeles last week and was seen by a Times reporter in regard to the much-mooted question of the condition of the beef served to the troops during the war with Spain.

It is evident from the conversation had that Dr. Goodfellow's intimacy with General Shafter throughout the war, or his making him a friend of the latter, or has not interrupted the friendship which existed before the war, and when he appears before the commission now investigating the conduct of the war, it is to be expected that his testimony will be of the nature of an earnest statement of General Shafter's position.

"The refrigerated beef was fine," said the doctor. "Every one of the Spaniards to whom I issued rations from the supply liked it. I ate of it myself, and I am sure it had no unhealthful qualities."

"The canned beef was different, from the fact that it was rather tasteless. It had probably been boiled, and the juice extracted before canning. Under whatever treatment it had been put, however, it was palatable when cooked with vegetables, which were necessary to give it a flavor to make it palatable. The men who objected to this meat were the volunteers, the regulars liking the refrigerated beef, and making no complaint against the canned article."

"As for the statement that chemicals were used in its preparation, if they were used, there is not a physician who would prescribe much more of the same chemicals to any patient suffering from dysentery, one of the complaints which afflicted the soldiers, and instead of their being injurious, they would probably have had a remedial effect on the soldiers, tending to protect them from one of the most prevalent diseases."

The volunteers were not accustomed to camp life, and did not understand how to take care of themselves. For instance, the First Illinois was issued three days' rations before leaving for Santiago, and while on the march, they naturally became tired and threw away their rations. As a consequence they were dependent on Roosevelt's regiment for food for a few hours, until a new supply could reach them."

New York, Feb. 7.—Prof. Sidney Sherwood of Johns Hopkins university, who is giving a series of addresses on the American banking system before the Brooklyn institute of arts and sciences, delivered his third lecture last night. His subject was "The Banks and Business: The Advantages and Shortcomings of the Present Banking System."

Prof. Sherwood began with the statement that banks are a necessity, and that their circulation is a great aid to the business of the country. He reviewed the various kinds of banks, and related that the national banking system had been developed almost entirely since 1865, about which time the state banking system died out, on account of the practically prohibitive 10 per cent tax imposed upon the notes issued by those institutions.

The speaker showed how much superior are the present bank notes to those in circulation before the war, and then read some figures to illustrate the growth of the present system. In 1865 there were 1,813 national banks in existence, having a combined capital of about \$338,000,000. The number gradually grew until 1895, when the maximum of 1,712 was reached, and since then the number has decreased slightly. Last year there were 1,555, with a total capacity of about \$621,000,000.
