

# The Tombstone Epitaph.

VOL. III.—NO. 35.

TOMBSTONE, COCHISE COUNTY, ARIZONA, MARCH 4, 1882.

FIVE DOLLARS A YEAR.

## WEEKLY EPITAPH.

Six-Page Edition.

TOMBSTONE, ARIZONA, MARCH 4, 1882.

This Page is from the Daily of Saturday, March 4.

SILVER ORE—A fine specimen of Tombstone silver ore sent by mail postpaid on receipt of \$1.00 for one year's subscription to the Tombstone Epitaph. Address: Epitaph Printing and Publishing Co., Tombstone, Arizona.

## WEEKLY MINING REPORT

Good Showing for the Week Ending March 4th.

Some New Mines Looming Up with Good Prospects.

### Bullion Output.

The bullion output for the twenty-eight days of February, while not equal to some previous months, shows that there has been no material falling off in the product of the bonanza mines.

Contention heads the list with.....	\$128,000
Tombstone M. & M. Co.....	115,000
Grand Central (estimated).....	110,000
Vizina Co. (estimated).....	45,000
Girard (estimated).....	30,000
Total.....	\$418,000

The mill returns for Grand Central, Vizina, and Girard have not been made at this writing, therefore, we estimate the yield upon the basis of former runs. The Girard mill was not started up until about the middle of last month, and for several days did not run regularly, consequently, we have made liberal deductions from what may reasonably be expected from it henceforth. We have not credited the Boston mill with any product other than the Vizina, as we are not advised as to what other ores, if any, it has been working. Should the Ingersoll company begin to send their ore to the mill this month, we expect to chronicle for the month of March an output in excess of half a million dollars, at which rate the production will be kept up for the remaining nine months of the year.

### Tombstone Hill & Mining Co.

TUGOT NUT.—East of the main shaft, close to the Good-East west side line, connection has been made during the past week between the 100 and 200 levels affording an outlet to the largest body of ore between these two levels, that has ever been opened in this mine. It is not to be understood by this that a recent discovery of ore has here been made further than that the development made by and from this connection is such as to determine an extent of high grade, ore beyond the expectations of the most sanguine. The 300 level drifts, from the main shaft, are steadily progressing with a favorable outlook; the south drift, at a distance of about 280 feet, strikes the contact of lime and quartzite, at which point it elbows to the west, the face of the drift being now in 60 feet from the angle or turn of the drift. Northwest shaft.—Notwithstanding the fact that twice, in the history of these workings, the outlook was considered unfavorable, on each occasion the ore body has been recovered and proved very profitable. The shipment of ore from this shaft, which has never ceased, though at times materially lessened, has been of uniformly high grade, and the present development, which is mainly confined to a westward extension of the 150 level, indicates that within the next quarter the Northwest will be a heavy producer. The face of the 150 level, west drift, is now in 30 feet from the shaft, the ore body being somewhat broken but improving steadily. A new boiler for this hoist came in yesterday and will be at once placed in position.

### JOHN EXONOR.

The ore in sight in the incline working of this mine, from the main shaft, is so great that it would be difficult to estimate it. In making the round of these workings yesterday drift after drift was traveled presenting to the eye hundreds of feet of pay ore in such quantities as warrants the assertion that there is in sight here, mill reserves for months to come. But the finest showing of the entire workings of this company is to be found in the combination shaft, drifts, winzes, stopes and cross-cut connections. The output from this section of the Good Enough has already exceeded \$1,000,000, and there is now, in sight almost, if not quite, an equal amount.

### WEST SIDE.—

Station now being cut out at the 150 level, and face of drift now in 40 feet to the north showing an average strength of 30 inches of high grade ore. The output from this mine still runs about 30 tons per week with a light force, the wagon samples never yet running below 100 ounces to the ton, and generally over 150 ounces.

### Output for the month of February,

\$115,000.

### Bunker Hill G. & S. H. Co.

This is a property that has not heretofore figured in these reports, owing to the fact that the superintendent, Mr. C. M. Macomber, did not care to make known his preliminary development work. The mine is situated on Bunker Hill, just back of Pick-em-up station, about one mile and a half west of town. The property consists of six sections adjoining each other. These are the Bunker Hill, Good Samaritan, Ohio, Dragon, Cleveland and Hazard. The development work has been confined to the Good Samaritan, which lies in the center of the group. When Mr. Macomber took charge of the property he found a 30-foot vertical shaft sunk on the east side of the ledge. This he continued down to 80 feet where he drifted west 28 feet to the ledge, which he found well defined and dipping to the west at an angle of about 60 degrees. He then commenced an incline, keeping the hanging wall for the roof of the

shaft, and has sunk 100 feet, making the total depth 180 feet. On the 80 foot level he drifted to the south 81 feet and to the north 23 feet without any material results. It is in the incline where prospects have justified him in the belief that he will get a most valuable mine. The ledge where crosscut near the bottom, is 12 feet wide, with the most perfect walls we ever saw. Both the hanging and foot walls are perfectly smooth and covered with greenish white talc that bears the impress of the dynamic agencies that forced the filling into the fissure after the fracture had been made complete by the throes of nature. The strata along both foot and hanging walls, rise toward the south at an angle of about 45 degrees, showing that the injecting force has come from the north. The filling consists of broken fragments of shale, decomposed quartz and clay, with threads of ore crisscrossing the mass at different points. In the bottom of the incline, next to the hanging wall, a vein of rather close grained crystalline quartz has been struck that assays upwards of \$300. This vein is about six inches wide and carries the silver falling (in this district) green horn silver. Its angle of occurrence seems to conform to the strata marks upon the hanging wall, which would indicate that they have struck upon the tail end of a chimney of ore which has its origin in the heart of the hill and which is liable to open out to the south of the shaft into great magnitude. The country rock is the porphyritic shale of the district that has been proven in so many cases most favorable for the production of rich mineral. The mine has been opened thus far with judgment and skill. Taken as a whole we consider the prospects for a valuable property first-class.

### Turquoise District.

From recent strikes made in this most delightfully situated camp it is more than probable that the active prospecting of claims, engendered by the finds in the Last Chance, Chrysolite, Fitzgerald and Mid-night, will establish, by convincing proof, the true merit of one of our most promising districts. We say most promising for several reasons. It has been characteristic of almost all the camps south of the Gila that the best paying bodies of ore have been found in limestone formation. While the Turquoise district extends westward into the Dragoons proper, the claims that show real merit are mostly confined to the limestone hills that, extending by a chain of isolated buttes from the extreme southeastern end of the district, connect by formation with the Dragoons, a short distance southeast of Cochise Pass. These limestone hills to the southeast of South Pass are all heavily mineralized, the main indications being an iron cap in the limestone. Water can be obtained in any of the gulches by shallow wells, and oak timber of strong growth abounds.

One of the most important strikes that has yet been made in this district is the find in the tunnel of the Last Chance, situated well up on the northeastern end of Defiance Hill. This property is owned by John Collins, who, single-handed, stoped his tunnel through an iron cap that was not very promising, uncovering a low-grade carbonate, which improved as he advanced the work, until, at a distance of twelve feet, he encountered a huge lime boulder which completely filled the tunnel, excluding a narrow horizontal strata of high grade ore that ran along the seam above the boulder. Working this out, the showing has constantly improved, until at a distance of 25 feet from the entrance, the entire workings of the tunnel are said to be in pay ore with no waste, through which a vertical seam of chloride and native silver holds a width in excess of 30 inches. The ore is all free milling, and Mr. Collins has on the dump about 15 tons of ore that will mill upwards of 100 ounces. Lowest assay had 169 ounces.

Another good prospect is the Justice, owned by Atchison and Haskins, a quarter of a mile to the northwest of the Last Chance on the same hill. The face of tunnel is now in over 100 feet in iron-stained quartz and broken ledge matter, which has been improving for the last 30 feet.

The Tom Scott and Challenge, owned by Bryant and Burkholder, on Defiance Hill, are two prospects of merit. The former has a shaft down 40 feet with the floor in a soft manganese, and the latter has a strong ledge opened up by a 30-foot shaft and a 20-foot drift. Work is to be resumed on these mines in a few days.

The Contention, owned by M. C. James, has a 75-foot shaft on a 13-foot ledge, which shows well in mineral.

The Defiance is a well known property of merit, and only needs to be worked to make a producing record.

The Silver Cloud, on the hill of the same name, in both shaft and tunnel shows a strong ledge, increasing in grade as it enters the hill from the gulch. Due south of this the Head Center has two shafts down on the same ledge. On the east slope of this hill, and just below the Silver Cloud, Messrs. Hartung and Cronin have a 35-foot shaft down on the Chrysolite, at which depth the water came in so fast that they were forced to abandon their work at a time when the ledge was showing its best. They have about six tons of ore out to the mouth of the Silver Cloud. About a quarter of a mile from this is the Union, owned by two Germans, who are about resuming work. They have some five shafts down on the ledge all showing well in mineral, but instead of prosecuting their work upon the ledge, made a mistake, which is too common, by leaving their shafts, started to tunnel from the east face of the hill for the ledge. Tunnel now in sixty feet.

One of the best showings of mineral in the district, though not as high grade as some others, is the Elgin, but as its owners hold it at an enormous figure and fail to develop, it lies dormant. The first north extension of the Elgin is the Plata Verdi,

which, at a depth of 100 feet, shows a 15 foot ledge. Next to this to the north is the Fitzgerald, the ore from which shows a mill record at the Boston Mill of \$71.63 to the ton without sorting. This is found below an iron cap which is more continuous and plainly defined on the surface of the Crescent and Seek No Further, two claims lying just to the west of the Fitzgerald. Work is to be resumed on the Fitzgerald at once.

At the northern end of Turquoise Hill, Messrs. Fly and Chase are steadily developing their fine copper prospect, the Mid-night, the oxide ore from which assays from 39 to 88 per cent copper.

### Vizina Consolidated.

We omit our usual report of progress this week in order to give the following expert report on the mine which appeared in the New York Daily Stockholder on February 23d:

Mr. H. B. Clifford, one of our noted mining experts, has, after a most thorough investigation, made a very elaborate and most excellent report on the property of the Vizina Consolidated Mining company. He says: "Some of the finest ore ever traced from the mine was found at 280 feet in depth, and I have every reason to believe that the ore will continue through under the first strata of the Vizina, but it will be found deep as a natural raise of the formation will carry it down to at least 500 feet; that the ore exists under the first strata is evident from the surrounding developments, and if the entire ground is stratified, as all of the developments in the camp have shown, then the intrinsic value of the Vizina mine can never be accurately estimated." In conclusion, Mr. Clifford adds: "Taking it as a whole, the Vizina property bids fair to be very productive, and prove a source of great revenue to the stockholders, and I would not be surprised to hear of its being classed as equal if not superior to the mines that are valued at from \$10,000,000 to \$20,000,000, and if its ore bodies improve as they have from the beginning, the expectations of the most enthusiastic will be realized. In reply to your last question, I must state that while I do not know what the running expenses of the mine are, there is ample ore in sight to meet all expenses and pay dividends for a long time to come." Bullion output (estimated) \$45,000.

### Contention Consolidated.

Exploration on the 500-foot level has begun, but as yet there have been no special developments made. The Flora Morrison shaft is 75 feet below the 500 station, and will be pushed to the 600 level where a station will be put in and the work of exploring the 600 level of the mine be pushed forward with vigor. The stopes on the 400 level are looking well, and have for the last two weeks been yielding ore considerably above the average. The hoisting works will be supplied with water from the new tank the coming week. They have commenced the erection of a carpenter shop at the Flora Morrison shaft, from which point the mine will hereafter receive its timbers. Bullion output for February, \$128,000. The company has declared its first dividend, payable in San Francisco; the amount is 25 cents per share, aggregating \$62,500.

### Ingersoll.

Work of taking out and piling up ore continues as heretofore. The superintendent is waiting for final action by the Board, in San Francisco, to award the contract and have the ore reduced. A bear movement by outside parties in San Francisco, who evidently desire to frighten small holders of stock so that they will sell at lower figures than now rule, is being made. A gentleman here has received two letters from San Francisco; giving the information that the mine is mortgaged to Mr. Conolly for \$110,000, and the dump for \$40,000, making a "plaster" of \$150,000. Upon inquiring of the superintendent if such was the case, he said, not to his knowledge. A look at the county records does not disclose such a condition of affairs, therefore we conclude the report is a bear movement. It has been known all along that the Anglo-California Bank has been advancing money at 10 per cent, to work the mine. This was better than assessing, for ore in excess of the expenditure was daily being taken out of the mine. Our advice to small owners is, not to be alarmed by such bear reports as above given.

### Grand Central.

The station for the 600 foot level, new shaft, will be finished in about three days, when sinking will be again resumed. At the old shaft, the drift from the 600 level intersected the ledge at a point 280 feet west of the shaft. The ledge at this point is strong and carries an increased percentage of gold over the upper levels. This is considered a good sign. The stopes are all looking and yielding well. The ore, too, is of a better quality than at last report. The mill is working well and to its full capacity. The bullion output (estimated) for February was \$110,000. It is possible that these figures may be increased when the final clear up is reported.

### Worcester (San Diego) Mining Co.

Work has progressed steadily on the different levels during the week with very little change from last week's report. On the 206 level the cross-cut is still in quartzite. The south drift holds the same in width and appearance. In the north drift the ledge is widening and the ore is higher grade.

### Old Guard.

Commenced sinking below the 150-foot level; down altogether 165 feet. Some exceedingly rich chloride and carbonate was struck on the hanging wall yesterday. There is also a fine vein on the foot wall. The face of the drifts look about as at last report.

### Eagle and Ironcloud.

These mines were bonded by Messrs. Richards, Fields and Rinehart, yesterday, to Percy Thompson, of Kansas City, for the sum of \$15,000, \$1500 being paid down as a forfeit. These are valuable prospects, adjoining the Contact, the Eagle having a similar contact vein as that mine.

### Green Cloud.

The bottom of the works are in a richer grade of ore than found above. The vein is said to be 2 feet wide, all good ore, with which assays up in the thousands. The stockholders are feeling quite jubilant over the present outlook.

**Masset Mine.**  
Gambusino, or in plain English, ore thieves have been at work in this mine, taking out and packing away an amount of rich ore, estimated at 5 tons by the owners. An effort should be made to capture these Ishmaelites, and have a proper example made of them. The owners intend starting work upon the mine at an early day.

**Omeiga.**  
The shaft is down 43 feet, with the bottom all in ore, assays from which give \$170 per ton. This is considered a good mine.

WERE all the mines that are bonded actually sold Arizona would be one of the most prosperous countries in the world. Unfortunately not more than one sale in ten is consummated under these bonds. This is one of the reasons why prospect owners are so persistent in their demands for a cash payment upon signing the bonds. There is scarce a week passes but we do not read a notice similar to this: "Yesterday, the Great White Elephant mine, situated in the Burro mountains, was bonded to an eastern syndicate (skin the cat would be the more proper term) for the sum of \$65,000. This is a new prospect and reported the biggest strike in the territory, and bids fair to rival the Comstock lode. The shaft is down 20 feet all in solid ore that assays from a few hundred dollars up into the thousands." The few days term of the bond in their rapid sands into the lap of time, and the owners of the Great White Elephant find themselves still the owner of the petted animal and the syndicate none the worse off, pecuniarily, for the lapse of the bond. Where forfeit is exacted the owners have some guarantee that an effort, at least, will be made to comply with the terms of the agreement but not otherwise.

### THE PACIFIC RUMORS.

There are numberless rumors afloat, says the New York Daily Stockholder, regarding the much talked of consolidation between the Union and Central Pacific roads, and the frequent conferences of Messrs. Gould, Dillon and Huntington lend color to a few, although it is known that some of the conferences relate to matters of lesser import. The demands of the Central Pacific are such that it would appear the consolidation may not be so near at hand as many suppose. The latest rumors concerning the matter are to the effect that the Central Pacific has demanded, as preliminary to the proposed consolidation, that it shall be made a joint owner of everything west of Ogden, north and south, including, besides the main line, the Oregon Short Line and the Utah Northern. These latter, as is well known, are the most valuable portions of the Union Pacific line; and it is, therefore, readily perceived that unless very strong influences are brought to bear it will not yield without a struggle. There are indications that in the near future some other arrangement may be made which will overthrow the whole Pacific coast scheme.

### EXAMINATION OF D. CALISHER.

#### Charged with Arson.

The case of the Territory vs. D. Calisher and Adolph Sultan charged with arson, came on for hearing before Judge Wallace at 1 o'clock this afternoon, the district attorney and Mr. Williams appearing for the prosecution and Messrs. Lewis, Berry and Ben Goodrich for the defense. There being no testimony against Mr. Sultan and the complaint being withdrawn the court, upon motion, ordered that he be discharged.

The motion of the defence to set aside the warrant, on the ground that the complaint was insufficient, was, by the court, overruled. The district attorney suggested a continuance until Monday morning but left the matter with counsel for the defense. They objected to a continuance and, answering ready, the prosecution called James Kenney as a witness who, being sworn, testified to facts as heretofore stated in the EPITAPH. At 3:35 the court adjourned, continuing the case until Monday at 10 o'clock a. m.

### LOCAL PERSONALS.

#### Mr. Ellis returned to Sonora this morning.

Col. J. G. Howard left by the coach this morning for Los Angeles.

Supt. H. J. McKusick, of the railway mail service, expects to be in Tucson next week with fixtures for the new post-office in that city.

Hon. W. H. Stillwell came up from Tucson last night to attend to some special business and returned this morning.

The Meyers-Brandt party when heard from a day or two ago were at Camp Colorado, Sonora. It is reported that they have found several rich ledges.

Mr. Piercy, of Prescott, is in town, and will take charge of the Grand hotel until that house opens.

E. M. Pitcher, Esq., while in a little sportive tussle, sprained his knee so severely that he has been confined to his room for the past day or two.

### LOCAL SPLINTERS.

INDIGNATION ran high all day yesterday at the attempt to burn the town.

Quite an extensive addition is being made to the residence of Dr. Ingersoll.

THE evening EPITAPH has been issued for a week now. How do you like it?

THIS has been one of Arizona's splendid days—so bright and beautiful.

HEREAFTER the postoffice lobby will be open at all hours of the day and night. Decidedly metropolitan.

MESSRS. McCarty & Stewart will re-open their dancing school for the benefit of the public.

THERE will be divine services at all of the churches to-morrow, Sunday. Go to church.

THE sale of postage stamps at the Tombstone office for the month of February amounted to the neat sum of \$886 24, and February is the short month, too.

IT was developed to-day that the stock in the Calahar store was insured (not by local agents, however) for \$10,000. What a loss it was to the owners that the fire did not do its work!

THE Oriental saloon is a daisy, and Mr. Joyce, the proprietor, says he does not "eat ham for breakfast" every day, the Nugget to the contrary notwithstanding.

THE abundance of rain in the San Pedro valley will ensure plenty of grass during the coming season. There are cheering prospects for dairymen.

OUR local troupe, who are to play next Tuesday evening at Mrs. Carrie Gregory's benefit, are in splendid trim, and will render their part with ability.

PARTIES desiring to make purchases in the hardware line will find a complete and first-class stock of goods at the large house of R. Cohen, corner of Allen and Sixth streets.

THAT portion of the city in the vicinity of the public school buildings has been designated as "Academy Hill," and it is becoming a favorite resort for private residences.

SIX series of photographs of Tombstone taken by the celebrated San Francisco artist, G. D. Morse, have lately been received and are on exhibition at Robertson's book store. They are excellent specimens of photographic art.

IN the attack upon the town of Nacori, Sonora, by the Indians some ten days ago, three were killed, and their bodies left on the field of battle. The Indians killed three Mexicans. The federal troops that were pursuing the hostiles at the foot of the Sierra Madre have been recalled to Guaymas.

THE strike in the Mules, recorded a few days since, is reported greatly overestimated. Mr. J. D. Power, who went out and examined it, severely censured an EPITAPH reporter for allowing so exaggerated a statement to go before the world through its columns. We make this correction for the benefit of the public.

TOMORROW there will be full services at the Presbyterian church. Dr. Robertson, formerly of Keaton, Ohio, who is in the city, will preach at 11 o'clock in the morning and 7:30 at night. The Sunday school meets at 10 a. m. All are cordially invited to be present, and we trust the doctor's advent among us will be heartily welcomed by a large attendance.

A SPLENDID specimen of Goodenough ore was presented O. F. Thornton, of the EPITAPH, yesterday, by Mr. D. McCarty, assayer for the Tombstone M. & M. Co. This sample shows to perfection the phenomenal richness of that mine. It is a combination of carbonate, chloride, green horn silver and free gold. It is highly treasured by the recipient as a cabinet specimen.

### Proceedings of the Executive Committee of the Tombstone Republican Club.

The meeting was called to order at 8 o'clock p. m., A. O. Wallace chairman, W. Street secretary.

J. O. Dunbar was elected to fill the vacancy in the club caused by the death of Thos. Waterman.

On motion of Dr. Mathews it was ordered that this committee call a meeting of the Tombstone Republican club to be held in the city of Tombstone, Cochise county, Arizona, on Saturday, the eighth day of April, A. D. 1882, at the hour to be designated by them, and that invitation be extended to the republicans of Cochise county to meet with said club at that time for the purpose of organizing the republican party in Cochise county.

It was ordered that the secretary be invited to give public notice of this call and invitation by publishing a notice of such resolution in the EPITAPH, Nugget and Gold Note.

On motion a committee was appointed to procure a room for the meeting of the club.

The secretary was directed to communicate with as many prominent republicans throughout the county as practicable in regard to the condition of the party in the county, and in regard to the meeting of republicans at Tombstone on April 8, 1882.

The committee then adjourned to meet Thursday, March 9, at 8 o'clock, p. m., in the office of Wells Spicer.

### The Chinese Question.

SAN FRANCISCO, March 4.—A Reno (Nev.) dispatch says Governor John P. Kirkhead, of Nevada, issued to-day a proclamation in which he expresses an earnest hope that the state will unite with California and Oregon in giving expression to their views on the subject of Chinese immigration and will urge upon congress the importance of speedy and favorable action on the bill now before that body. He concludes by saying: "The practical unanimity of the vote on the question at the last election in Nevada justifies me in expecting a prompt and enthusiastic response to the call."

## LATEST TELEGRAMS.

(Special Dispatches to the EPITAPH.)

### GOOD INDIANS.

Particulars of the Hanging of Dead Shot, Dandy Jim and Skippy.

FORT GRANT, A. T., March 3.—Dead Shot, Dandy Jim and Skippy, Indian scouts, were hanged here to-day in the presence of about 200 persons, mostly soldiers, for the murder of Capt. Hentig, Sixth cavalry, and his men at Cibicu creek last August, the incidents of which are still fresh in the memory of all. They were tried by a court composed of army officers last November and sentenced to be hung, which was approved by the president who designated March 3, as the day for the sentence to go into effect. Upon receipt of the sentence and the president's action thereon, every precaution was taken to prevent an escape. Each prisoner was confined in a separate cell, securely locked, and when necessary to allow them out of their cells, were carefully guarded and only one allowed out at a time. Notwithstanding the vigilance and precaution exercised, Dandy Jim succeeded in separating his shackles some three weeks ago and made a desperate attempt to escape, but was fired on by the guard. After running about 500 yards, he was wounded in the left arm, from the effects of which he was suffering when he appeared upon the gallows. They ate sparingly of the breakfast placed before them this morning, and did not once look in the direction of the gallows. After breakfast, Dandy Jim asked how many hours he had to live, and when told, it caused a marked effect on his appearance. Immediately afterward they were handcuffed, the first time since their confinement, and conducted back to their cells, from which they were never again to depart only to die.

At 12:20 p. m., the shrill note of the trumpet was heard, which proclaimed that the hour for the execution was near at hand, and the troops assembled in front of their quarters, under arms, and marched to within about twenty yards of the gallows, where the orders promulgating the sentences were read to them. During this time the three doomed men looked for the last time from their place of confinement, and were conducted to the gallows which they mounted smilingly, and showed no signs of fear. The platform was reached by steps ascending from the rear. The height from the ground was six feet, with a four foot drop, giving two feet of clearance. The trap door extended the full length of the platform, which was twelve feet. The prisoners were ranged along the platform, the rope adjusted, and a man behind each one to steady him. Their hands and feet were then securely pinioned, and they were told that if they had anything to say time would be allowed them. All gave much the same answers, that it was not right to hang them; the white man had given them good clothes and food, but were now going to take all away from them; they were satisfied to die, as they would meet all their friends gone before them. Dead Shot said he had suffered a good deal in this world, and would be soon happy. The chaplain then offered up a prayer for their souls, and at three minutes past 1 o'clock the black caps were drawn over their heads. The nooses were examined and at five minutes past one the lever which supported the trap was pulled and the three men were launched into eternity. There was no perceptible struggle, only with Dandy Jim, over whose body a slight tremor passed for a couple of seconds. After hanging ten minutes the physicians felt their pulse and pronounced life extinct. Seven minutes after the bodies were cut down and consigned to coffins. There was no excitement whatever and the successful manner in which the affair was managed and conducted was commended by all who witnessed it. The bodies will be interred in the vicinity of this post.

### Tucson and Other Topics.

TUCSON, A. T., March 4.—The forty Indian scout prisoners at Fort Lowell, who were implicated in the Cibicu outbreak, will be returned to San Carlos to-day and set at liberty. Their capture, detention and transfer has cost the government over \$15,000, and although the evidence was conclusive of their participation in

the outbreak, no effort was made to enforce a legal examination into the facts, or any measures adopted to punish them. The general feeling is that a great mistake is made in returning them to the reservation, as they boasted that the white man did not dare to punish them, and they will go back and act more insolent and become more unmanageable than ever. They will be under the escort of twenty soldiers.

A new schedule for passenger trains has been ordered. Trains coming east will arrive in Tucson thirty minutes later than now and at Deming at the same time as now. Trains going west will arrive at Yuma thirty minutes later than now. Both of these changes will accommodate passengers as it will give breakfast at six at each place.

A large addition is being put up to the largely hotel here on account of the increased travel. The work of changing the Southern Pacific railroad track from the Cienega is now going on. It will be constructed on the mesa lands, thereby avoiding the floods of summer. The length of the change will be about three miles.

Bowie Station, on the Southern Pacific railroad, is assuming the appearance of a busy town. A large hotel is in full blast, and a round house, machine shop and other railroad buildings, are in course of construction. This is the end of a freight division, and the distributing point for Gleebe, San Carlos, Thomas, Fort Apache, Fort Bowie, Gila Valley, and Clifton. There is a large supply of excellent water. The soil is good.

News from Magdalena, Sonora, is to the effect that the Guaymas road is completed 100 miles north of Hermosillo, at which point connection is made with the stage lines of Arizona.

Gov. Ortiz has expressed himself strongly in favor of the Tucson & Port Lobos railroad, and has issued an official order to all minor officials near the line of the proposed survey, to give all possible aid and information to the railroad engineers.

Arrangements will be made to give Gen. Sherman and party a grand reception in Tucson.

### The Dolliver Jury Disgrace—Shocking Victim.

SAN FRANCISCO, March 4.—The jury in the case of Dolliver, after having been out some hours, and not being able to agree, was discharged last night.

Henry Martin, aged 12 years, was drowned yesterday in Mission Creek under shocking circumstances. It appears that a scavenger, named Augustine Locking, wretchedly set a large, savage dog after the boy, who, in great fright, ran into the stream to escape the animal. He got beyond his depth and was drowned. Locking has been arrested on a charge of manslaughter.

### Foreigners in Utah.

SALT LAKE CITY, March 4.—Statistics show that nearly 3,000 foreigners were brought here by Mormons in 1881.

### TUCSON ITEMS.

From the Citizen, Id.  
Mr. C. S. Strong, one of the pioneer superintendents of the Comstock, registered at the Palace this morning from Sweet Canyon, Nev.

The Virginia City Chronicle states that Samuel Stevens, formerly captain of police in that city, and a well-known miner, will leave for Shakespeare, N. M., to take the superintendence of a mine.

The board bill of the prisoners in the county jail for the month of February amounts to \$443.86. There are thirty-seven in jail for the county of Pima, one for Pinal, one for the United States and twenty-two for the city. They are boarded at the rate of forty-two cents per head.

The telephone wires yesterday made a union on their connections with the Arizona Lumber yard, and the gentleman in charge was in a measure bewildered by the confidential relations he at once assumed with half the families in Tucson. His popularity was so instantaneous and universal, coming as it did from so many different quarters, that his entire time was occupied in making excuses, some of which were worded in the daintiest of phrases and some of which were not. The Citizen office was the recipient of the latter, for which even we feel grateful.

### Assessment Notice.

City of Tombstone, County of Cochise, Territory of Arizona, January 21, 1882.  
To Alfred McAlister your heirs or assigns, you are hereby notified that we have expended one hundred dollars on the Aunt Sally mine, lode or ledge, located in Tombstone mining district, County of Cochise, Arizona Territory, in order to hold said premises under the provisions of the revised statutes of the United States, section 2318, being the amount required to be done to hold the same for the year 1881. And if within ninety days from the service of this notice or within sixty days after this notice, no publication is made, or if you fail or
