Rosy Cheeks Made by a good feed.

A half thing to know, White women,
That to be all that you can feed,
Your children's health is what you need.

The food you give them is the wealth
That makes them grow and make you glad
That you have them, as you said.

Does not the land, the sea and sky
Send forth their wealth to you,
And do you not give them food?

There's a reason for grape-nuts,
For the benefit of all,
To make your children wise and tall.

TROPICAL AGRICULTURE is destined to become one of the greatest wealth producers on the American continent. This will be an evolution, and only a few years time. It is an definite and absolute in results as the succession of day and night."—B. F. Fisher, of Ohio, in January number of "Modern Mexico."

NOTICE TO STOCKHOLDERS

Checks Now Going Out!

I desire to state to shareholders of the International Lumber and Development Co. that checks have been mailed for payment of the extra 2 per cent. dividend declared Jan. 31st, continuing ar- riving in this city Thursday; but some should not be surprised if they do not receive their checks for several days, for they are sent out from an alphabetical list of over five thousand.

Next guaranteed 4 per cent. dividend April Ist.

To those who see no notation I shall add this, that the extra dividend paid by this company—a total of 24 per cent. to date, an average of nearly 1 per cent. a month. This excellent showing was made possible by the large business operations of the great property when the company took it over, and which have been constantly increased since then. They now complete vast and valuable tropical forests and plantations, 30 miles of railroads in the Gulf, two steamboats, large new sawmills at Mobile, Ala., etc., with about 1,000 men employed. Great development work going on under your contract paid for from sale of stock—only a few more shares of which can be bought at par.
