Delaware May Be First Battleship to Pass Through Panama Canal

WEATHER
WASHINGTON, Nov 13—According to the Weather Bureau today, the present pressure will be in the region of the Atlantic coast, and should operate in such a manner as to make the weather favorable for the passage of the battleship "Delaware" through the Panama Canal.

The battleship "Delaware" may be the first vessel to pass through the Panama Canal, as it is expected to arrive at the mouth of the canal on November 15. The arrival of the "Delaware" will mark a significant event in the history of the canal, as it will be the first ship to transit the new waterway.

The "Delaware" is a battleship of the United States Navy, and is one of the largest and most powerful ships in the world. It is expected to play a significant role in the defense of the United States, and its passage through the Panama Canal will be a major event in the history of the canal.

The "Delaware" was built at the New York Naval Shipyard, and is powered by two coal-fired boilers and four turbines. It has a displacement of 41,000 tons and a speed of 21 knots. The ship is armed with 16 406mm guns and 12 120mm guns.

The Panama Canal is a vital navigational route, and the construction of the canal was a major engineering feat. The opening of the canal in 1914 revolutionized the global shipping industry, and has since played a crucial role in the economic development of the region.

The "Delaware" is expected to arrive at the mouth of the Panama Canal on November 15, and will then proceed through the canal and into the Pacific Ocean. The ship is expected to arrive at its home port in New York City on November 20.
