Washington Woman’s Duty Is to Track Down Godmothers for Navy Craft

20 Years’ Service Given
To Exacting Research
Genealogical Information
Made Available to Guide
Department’s Action

By James Mordey Minter

Probably no other woman in America knows as much about war as Mrs. James Frideres Minter of Napa, who spent 20 years working as a genealogist with the Navy. Her knowledge is based on the research of thousands of genealogical records, which she has used to trace the ancestry of sailors who have served in the United States Navy.

Recently, Mrs. Minter has been working with the Department of the Navy, providing genealogical information to help identify sailors who have served in the past. The information she has provided has been invaluable to the Department, which is seeking to identify sailors who are eligible to receive medals and other recognition for their service.

According to Mrs. Minter, the research has been difficult, but she has been able to identify many sailors who have served in the Navy. She has also been able to provide information about the families of these sailors, which has been helpful in identifying relatives who may be eligible to receive recognition.

Mrs. Minter’s work has been recognized by the Department of the Navy, which has awarded her a medal in recognition of her contributions to the genealogical research.

RADICAL CHANGES BEING MADE IN DAILY MENUS OF FAMILIES

Modern Living Conditions Lead Public to New Attitude in Selection of Standard Home Supplies

By Herbert Halderman

Today’s busy families are confronted with a dilemma: how to select the best home supplies for their daily needs. The problem is complicated by the fact that there are so many choices available on the market.

Many families are finding that they are no longer content with the traditional menu of foods that have been staples in their homes for generations. Instead, they are looking for new and innovative ways to prepare their meals.

Smallers Quarters, Canned Goods’ Use,
Reform of Eating Habits, Health Rules Leave Their Marks

And has changed the way many people shop for groceries. As a result, there is a greater emphasis on eating healthy, nutritious meals.

One of the major changes is the use of canned goods. Rather than relying on fresh produce, many families are now using canned goods as a way to save money and time.

But with the increase in the use of canned goods comes a new set of problems. Canned goods can be high in sodium and other unhealthy ingredients. Many families are now looking for ways to reduce their intake of these ingredients.

Another change is the reform of eating habits. Families are now more aware of the importance of healthy eating and are making an effort to incorporate more fruits and vegetables into their meals.

One of the main goals is to reduce the amount of sugar in the diet. Many families are now using natural sweeteners, such as honey, as a way to sweeten their foods.

These changes are having a significant impact on the food industry. Companies are now producing new products that are healthier and more nutritious.

In the end, the changes are a reflection of the changing times. As families become more aware of the importance of healthy eating, they are making adjustments to their daily menus to accommodate these changes.

The goal is to create a new generation of healthy eaters, who are more aware of the importance of nutrition and are making healthier choices in their daily lives.

And so as we see, we will see a shift in the way people eat and what they eat. The changes are occurring slowly, but they are irreversible. The new generation of healthy eaters will lead the way for future generations, who will continue to make healthy eating a priority.
