

WEAKNESS ON THE SURFACE

The Undertone of the Market, However, Continues Strong.

American Stocks Share in the Decline in London-Northern Pacific Situation Unchanged—Effects of the Franchise Tax Decision.

NEW YORK, Oct. 25.—The stock market today retained the superficially uncertain course it has displayed during the week. Beneath the surface a decidedly strong tendency was evident. Nothing new or definite was presented for consideration in this morning's news. The London market was generally weak and American stocks participated in the decline appearing there. Foreign buyers followed up this lead in fairly heavy sales in the market, disposing of upward of \$3,000,000 of stocks on balance.

It may be owing to the last named transactions that sterling exchange advanced rapidly and approximated a figure which, at the prevailing European rates for a discount, showed shadowed exportations of gold. Aside from returns of railway traffic submitted, there was little that was definite bearing upon particular stocks. No news was given concerning the Northern Pacific situation and it is likely there will be none until the return to this city of one of the leading figures in the controversy in question. The stocks directly affected were comparatively sluggish today, although notwithstanding its varying movements St. Paul showed an undertone of great strength. Nothing new in the situation in the Copper industry came to light, the prevailing view being that the industry will be a little further broadening of the market and a little further advance of prices.

Notwithstanding these facts, it seems doubtful that the market will show a real change in the situation. Conditions are good and a bull movement is to be expected in time, but there is no evidence as yet that can be relied on, that the big people, the controlling interests, are ready for the advance. Therefore, while it is still considered advisable by careful people to buy stocks on the decline, it is also thought probable that there will be such a dip as to enable sharp buyers to get in at a profit. There have been some advances in the Northwest. As the level has been pushed up there has been a little but not a great amount of buying in the public. The insiders, if they have done anything, have sold stocks, perhaps to get out of the market before the money conditions are uncertain.

The bank statement will be a rather poor one as far as can be judged in the light of the fact that the balance sheet of the Illinois Supreme Court, and they have lost \$1,500,000 to the Sub-treasury. The amount of the balance sheet received from pension payments and an account of Australian gold. This makes a total of \$1,500,000. It is not clear whether the amount will be offset to a certain extent from other sources, but it is evident that the balance sheet is somewhat in excess of what was expected. As far as can be judged the bank statement will show some increase, but it is not likely that the bank statement will have much, if any, effect on the stock market. It is very certain that money will begin to return from the West and South in the near future, and this will be a better showing. The surplus reserve will not be wiped out before this occurs, and there is no reason to believe that the market in the event of a big stock market and heavy demands from the speculators.

The strength of the market yesterday caused many to believe that the market was in a strong position. The various reports regarding the coal stocks, anthracite and bituminous, were not as strong as they were in the same way that the sharp advance of these securities was a feature of the market. The coal stocks, however, it is pointed out, for instance, that the amount of coal produced will be about 10,000,000 tons in excess of last year. This fact, with the advance in the price of anthracite, now in 10 cents per ton more than it was last year, means that there will be from 100,000,000 to 1,000,000,000 worth of anthracite coal in the market. The various railways will get a very large share of this extra coal, and this will be a very good thing. The Reading, of course, will be at the front. It is estimated that the Reading will receive at least 100,000 tons of coal in addition to the dividends on both the bituminous and anthracite. This naturally makes careful people bullish on this group of stocks at this time.

The bituminous coal stocks did not advance so rapidly as the anthracite, but they were not bought and all shared in the gains. The arguments in this case are that the bituminous coal is in the hands of a few large companies, and that the coal group, business is heavy and the outlook is fine.

There were two or three stories regarding Baltimore and Ohio to account for the decline in the price of this stock. It was one of the best in the entire list, getting to the highest price of recent years. It is pointed out, however, that the Baltimore and Ohio is not a coal stock, but a general utility stock. The price of this stock is not likely to be affected by the coal market. The Baltimore and Ohio is a very good stock, and it is likely that it will continue to advance in the future.
