

ARNAT AND HIS VITASCOPE

Edison Gives His Name, But Did Not Invent It.

HOW THE WONDER WORKS

Description of the Machine Which Throws Colored Photographs on Screen.

When it was announced several days ago that the inventor of the Edison Vitascope was not the Wizard of West Orange...

Mr. Arnat's workshop is approached through his office rooms. At the rear end one finds himself in the bright light of a large hall...

THE MYSTERIOUS BOX

But the people in front are all wrong. They might search the stage in every corner for the vitascope in vain.

The vitascope to the unscientific mind is an inexplicable affair. It is very big, very simple, very exquisite in mechanical workmanship...

What one sees in the slide-like inclosure are two tiny cones of light, which resemble the supports of a piece of heavy machinery...

THE RIBBON FILM

The pictures to be reproduced have been photographed on kinetoscope films and are no larger than the nail of one's thumb...

Dramatic Notes

"Inco" is to take the road again. Even New Orleans reports good business. Ada Rehan arrived from Europe on Friday...

for a moment on the film would melt it. The magnet being in the way cuts off the light. But when the electrical current is turned into the track of the wheels...

OUR WIZARD'S LABORATORY

The laboratory of the Washington Wizard is remote and seclusive as are most of the wonder workers who wrest Nature's secrets from her.

Mr. Arnat's workshop is approached through his office rooms. At the rear end one finds himself in the bright light of a large hall...

POSSIBILITIES OF THE VITASCOPE

Speaking of the possibilities of the vitascope, Mr. Arnat said: "I am perfecting an almost endless film, which will take innumerable reproductions. For instance, it will be possible to start at one corner of a room...

THE VITASCOPE IN OPERATION

The Vitascope in Operation.

time all the motion of carriages, cars and pedestrians, reproduced accurately. This same experiment may be made from a car window, and one can stay home and at the same time enjoy the color, outline and motion of a railroad trip.

THE VITASCOPE

The Vitascope is not Mr. Arnat's first invention. He has for several years been devoting himself to scientific pursuits.

THE VITASCOPE

Another use of the present wonder is what is called the Edison Vitascope. It is a "drop-a-needle-in-the-slot" Vitascope. But the pictures seen are two feet square, and have all the appearance of being life size...

SENATOR HILL'S DOUBLE

Lives in Washington and is Named Jacobus Seneca Jones.

CLERK IN THE LAND OFFICE

Ten Years Younger Than New York's Famous Politician and Differing in Color of Hair and Eyes—Other-wise a Perfect Counterpart—The Two Men Opposite in Disposition.

Senator David B. Hill, of New York, has a remarkable double. His name is Jacobus Seneca Jones and he lives in Washington...

HAIR AND EYES DIFFER

Their noses, too, are precisely alike—straight, sharply and firm. Their black mustaches, furthermore, are perfectly matched.

JONES ACCEPTS THE FACT

As it is the resemblance is entirely involuntary on Jones' part as well as on Hill's, and Jones, although he is no means a great actor, is not averse to the prospect of promoting the flattering illusion that he does of dispelling it.

JONES NOT ACTIVELY IN POLITICS

While Jones is as passionately fond of politics as Senator Hill, the manifestations of that fondness in Jones takes a totally different turn from those of Hill.

THE VITASCOPE

Another use of the present wonder is what is called the Edison Vitascope. It is a "drop-a-needle-in-the-slot" Vitascope. But the pictures seen are two feet square, and have all the appearance of being life size...

CONSPICUOUS SUPERSTITIONS

Some Pet Fancieful Horrors of Prominent People. New York Press.

Most men are ashamed of their superstitions, because they hate to be laughed at, yet we have known many to make fun of the weakness of others merely to keep their own courage up.

Art Notes

At this time of the year, when nature is her most beautiful, the art world is also in a state of high activity.

The summer sketches will be up and touched up a bit, but he wants to go out again, after the fashion of the good painter, to study nature and to get the colors of the sky and the earth.

Both art schools open tomorrow. The League begins with a few changes, both in curriculum and in instructors.

Mr. S. Jerome Uhl has returned from Atlantic City and is just unpacking canvases and putting his studio in order preparatory to another trip.

Mr. Uhl will not return until November 6. During his summer trip Mr. Uhl made fourteen sketches in oil, several of which he has finished and will show at the reception of the League at the end of the month.

Mr. Harold Macdonald is engaged on a portrait of the late Mrs. H. O. Claughton, which he is making entirely from the composition of old photographs.

Miss Lillian Cook returned Monday from her three months' trip in Europe, talking over with good spirits and a jolly good nature.

Miss Hattie Burdette, who is working in Macdonald's studio, is preparing a certain number of oil paintings, the execution of which she has just completed.

Mr. S. J. Dunbar has begun a portrait bust of Admiral Stovess, and a small bust of Mr. DeLansy.

Mr. and Mrs. Wells M. Sawyer have rooms at a studio in the corner of Seventeenth street and Pennsylvania avenue.

EDUCATING SENSE OF TOUCH. Nerve Faculty That May Be Improved by Cultivation.

The question has been asked, Which of our senses is most capable of improvement? All English scientists say probably the sense of touch.

But there are many trades which afford abundant evidence that the sense of touch, at any rate in the human hand, is largely developed.

The blind beggar can very soon discern between different metals merely by the sense of touch, and in fact, the education of the blind affords a remarkable instance of the development of this sense.

On the other hand, the sense of smell and the sense of taste are, each of them, blunted and lose their finer perception if the same object is frequently presented to them.

But there are many trades which afford abundant evidence that the sense of touch, at any rate in the human hand, is largely developed.
