**ALWAYS CARRY A SPARE TIRE**

Why spoil the pleasure of a motor trip by setting off without a spare tire? With a view to economy many drivers are carrying no spare tires to-day, but it is a form of economy that does not pay. A spare tire of good quality is one of the absolute essentials for a car—it is the tire you depend on to bring you home.

The spare ought to be covered to protect it from the effects of sunlight and heat, says the United States Tire Company. Sunlight has a bad effect on rubber even in the coldest weather, for it produces a "cracking" or "checking" on the surface which rapidly extends to the interior, causing deterioration. Heat has an even

more destructive effect. Spares sometimes are carried uncovered near the exhaust. This is poor practice if the heat strikes an uncovered tire directly.
