## This Happened Once

A lady called on the telephone several days ago and asked the price of a well known brand (generally conceded the best on the market) of shredded cocoanut. We replied that our regular price was fifty cents per pound but on larger quantities would make a little better price.

A few days later she called at the store and stated she would take 5 pounds at the price quoted. In explanation of her inquiry over the phone she said a grocery peddler was at her home (in the country) at the time she phoned and among other alleged bargains offered her by him was a good grade of shredded cocoanut at a price of 65 cents a pound in 5 pound lots. Now, according to the lady's unbiased opinion the cocoanut offered her by the grocery peddler was just as good as ours---no better---in fact she thought his sample might have been taken from a package of the brand we carry, and the remarkable thing about it was that his price was only fifteen cents per pound more than our price and he required her to buy a quantity while she could get it from us fresh as needed.

This is but one of the remarkable exposes that comes to our attention during a year. Verily we all are liable to get taken in sooner or later when we deal with strangers unless we are as wide awake as this lady was.

Friends, living among you as your home merchant does, he should not from principle and cannot as a successful business policy, resort to the tricks of salesmanship that a stranger might. He has not the opportunity to give you the "rush act" and load you up with something you don't need. He can but tell you the unvarnished truth, show you his goods and abide by your verdict whether he is to live or starve. But by all that is reasonable there is no reason under the sun why a peddler can sell you groceries, quality for quality, at less than your local merchant. It is the peddler's business to make you believe he can. If he succeeds your interests are injured, the interests of your community are injured and if carried farther the business of your home merchant, the man who lives among you and whom you call friend, is ruined.

### The Potlatch Products' Store

STANTON BROS.

## Household Rubber Goods

Are Guaranteed for Two Years

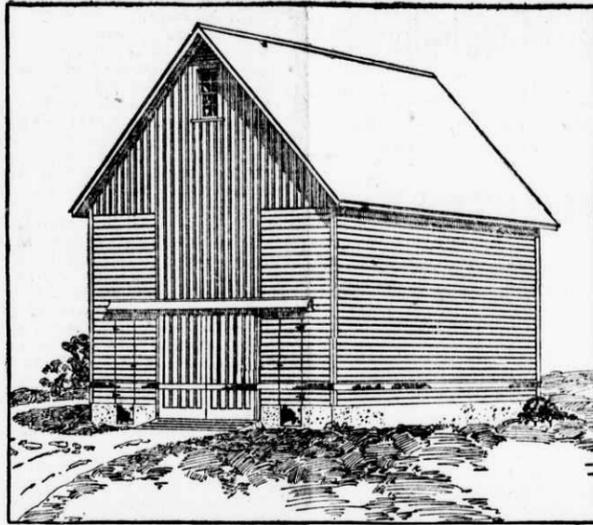

A printed guarantee in every box, that gives you a two year's privilege of return or exchange at any Rexall Store. No matter what article of the big Maximum line you buy, should it not give full service for the full term of two years, take it back and get your money. No matter in what town you bought the article. A hot water bottle, an atomizer, an ice cap---or anything that bears the maximum trade mark---tho bought in Los Angeles, may be redeemed in Winnipeg, Canada; or if bought in Pensacola, may be redeemed in Dublin, Ireland.

No guarantee like this, good anywhere, has ever before been offered on rubber goods.

Maximum water bottles. Reinforced seams, "Can't lose" stopple, in three sizes.  
Maximum fountain syringes. All rubber, with extra large tubing, in 2 sizes.  
Maximum ice caps. Extra strong and durable, cloth inserted.  
Maximum massage bath sprays. A massage brush and bath spray combined.  
Maximum invalid rings. Also useful as automobile and chair cushions. Very strong, 10 sizes.  
Maximum face bottles. Round; "can't" lose stopple.  
Maximum household gloves. Seamless. Tapering fingers.

## DEPENDABLE PERMANENT STOREHOUSE ON FARM TO INSURE SAFETY OF GRAIN CROPS

CONVENIENT COMBINATION CRIB AND GRANARY.

(Prepared by the United States Department of Agriculture.)

Millions of bushels of corn could have been saved in a marketable condition last fall if proper farm storages had been available for the accommodation of this grain. The farmer possesses no regulatory powers over the weather man; he has no control over season, but he can fortify himself against the crop losses which often occur as a consequence of inadequate equipment and unserviceable shelter. Time was, with grain dirt cheap, that any sort of a makeshift crib or bin was satisfactory as storage for the grain crops. In actual dollars and cents, many farmers reckoned they could stand the losses of a few bushels of grain better than they could afford the cash outlay for the construction of dependable, permanent storehouses. Fortunately, the prevalent high prices of grains are pushing the props from under this outworn theory. The loss of several tons of corn or wheat, in view of the present market prices, mounts into three-column figures, and it doesn't take many such losses to make this waste loom large as a mountain.

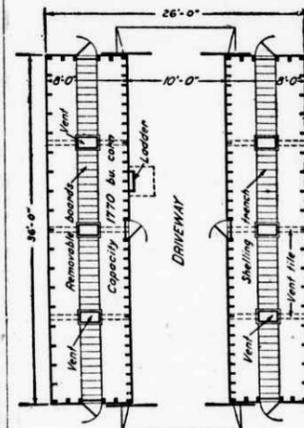

### Crib and Granary.

The specialists of the division of rural engineering of the bureau of public roads have devised a highly efficient and relatively inexpensive combination crib and granary which merits the careful study and investigation of every progressive farmer. This storage has made a hit with practical farmers who have subjected it to the acid test of extensive use under a wide range of varying conditions. It is adapted for the average, general purpose, corn-belt farm. It furnishes as nearly ideal conditions for the drying, curing and storage of grains as are practical. It minimizes hand labor in handling the crops, while it favors the maximum utilization of labor-conserving machines. It is free of waste space, while it is equipped with detachable safeguards for protection against damaged grain in the way of ventilators and drying racks which can be removed during seasons when they are unnecessary.

### Prevents Spoiled Corn.

Investigations have shown that corn which seems well matured at husking time may contain as high as 33 per cent moisture. If this corn is heaped together in unventilated cribs, much of it will rot and mold. On the other

consists of drying racks situated near the top of the crib where the corn can be suspended for from three to ten days before being dumped into the crib proper. On these racks the ventilation conditions are extremely favorable to the proper curing of the corn. Furthermore, the crib is provided with removable ventilators which supplement the shelling trench in the floor, to provide a correct system of air drainage; this combats the tendency of moist, damp corn to damage in the crib. As the corn is dumped

Floor Plan of Granary.

from the drying racks it falls into conical piles in the crib, where, over a wide surface, it is exposed to thorough ventilation and drying before more corn is dumped on top of it. These racks do not interfere with the maximum filling of the crib, as the outer rack may be fastened back on the rafters while the inner rack is raised and the space below filled.

### The Shelling Trench.

The shelling trench in the floor of the crib is another valuable labor-saver, because one man with a long-handled rake can roll the grain from the top of the crib into the drag as fast as the ordinary sheller can handle the grain. In this way the attendant is able to prevent corn slides and jams in the drag. The bottom of this drag is at ground level and is smooth, so that the drag can be easily pushed under the corn. As already stated, this trench is used as an inlet duct in the ventilation system by screening its ends to keep out rats and other rodents. At regular intervals the trench extends from the shelling trench through the wall in order to provide for a cross draft of air into the trench.

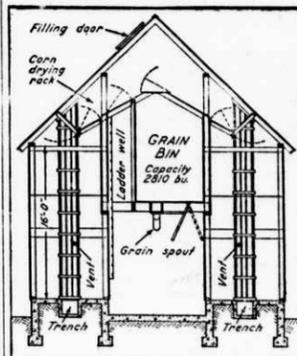

Any or all of these suggestions may be incorporated into any crib of similar design. The expense of such improvements would be repaid in one or two seasons of damp grain. The ventilators which are used are readily removable, while the drying racks are hinged so that they can be drawn back out of the way. The grain bins are easy to install, and they occupy what was formerly waste space in cribs with steep roofs and high peaks. Furthermore, a concrete feeding floor on which corn may be fed to hogs can be installed at the option of the owner. Complete working plans and bills of material for this desirable combination granary and crib will be furnished to any farmer in the United States if he will direct a request for them to the Chief, Division of Rural Engineering, United States Bureau of Public Roads, Washington, D. C.

### AVOID ALL WASTE OF GRAIN

Where an Excess Has Accumulated in Litter Draw It Off and Let Fowls Work It Over.

In case an excess of grain is accumulating in the litter, the best way to readjust quickly is to draw the litter, both coarse and fine, into one or more piles or rows, and give no more food until the hens have worked these over as often as necessary to get all the food.

Another thing to guard against is the waste through feeding very small or finely broken grains. Of the latter, cracked corn, in particular, often contains much fine material which should be sifted out and used elsewhere.

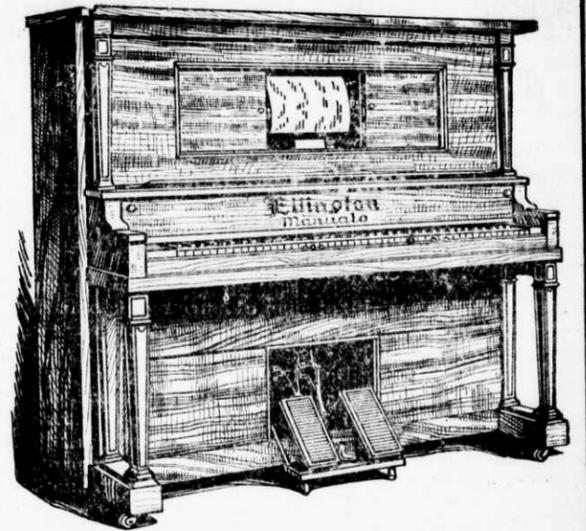

Front View of Granary.

hand, if this grain is properly stored in ventilated cribs, most of the excessive moisture will evaporate in a few days. In order to facilitate the proper curing of the corn, as well as to permit of handling the grain in large quantities, specially planned drying racks are used in the combination granary under discussion.

This crib and granary is 26 feet by 36 feet in floor dimensions with a capacity of 2,810 bushels of small grain and 3,540 bushels of corn. The overhead grain bin occupies space which otherwise would be wasted in an average crib of this character. To give the building proper height and pitch of roof to favor the efficient use of either a stationary or portable elevator, this otherwise surplus space is necessary. It is occupied by the overhead wheat bin. Present-day economical construction necessitates the use of high studding in wooden structures rather than the use of long, sloping roofs.

A special feature of this corn crib which has been devised by the experts of the rural engineering division

## BEWARE OF RUMOR

The smoothness with which we shift from a war footing to a peace footing rests with each of us as individuals. We must keep in mind certain things.

We must remember that this huge task cannot be made without some minor labor disturbances; that there may be abrupt rises and declines in the prices of certain goods and that there will be a slackness of production in some lines of industry.

By keeping these things in mind as possible natural happenings, we shall be able to discount idle rumor. By discounting rumor, which gives the unthinking a reason for acting, we shall nip at the bud the principal products of rumor panics and various forms of industrial unrest.

Let us discount all rumor. Let us keep our feet on the ground and think straight, and all will be well.
