

feet, beware, that is if you happen to be in the confines of L. A., for the censor man may get you when you're not watching out.

For two feet is the recognized length of the kiss which has been examined and passed by this august body.

In taking two feet of kissing the camera crank turns four times. This

exposes 32 separate pictures. It requires six seconds to throw the censored kiss on the screen.

Quite a while and a good deal of work it took to standardize the "movie kiss." But it is fully expected that the tall devotees of the film who engage in the amorous dissipation of osculation will fall into line with the new program.

WHAT WOULD HAPPEN IF 8,000,000 WOMEN STRUCK FOR A DAY

MRS. N. DE R. WHITEHOUSE

BY J. H. DUCKWORTH

New York, Sept. 9. — "Wasn't it, after all, a big bluff?"

Bluntly, I put this question to Mrs. Norman D. R. Whitehouse, New York society leader, wife of a Wall street millionaire banker and an ardent suffraget. It was from the imaginative brain of Mrs. Whitehouse that has sprung the idea that the 8,000,000 women workers of the country should go on strike for ONE day just to prove to the men that woman's place, after all is NOT in the home, and that they should therefore be given the right to vote!

"No, it was NOT a bluff!" answered Mrs. Whitehouse with much vigor. "We were very, very much in earnest, indeed.

"But the mere threat"—and here Mrs. Whitehouse gave a mischievous chuckle at the recollection—"to ask the women of the country to stop at home for only one day has so frightened the men that we decided that we have gained our point, and this is that:

"There can be no home except as woman takes her place outside as well as inside it."

"Almost one-sixth of all the manufacturing and mechanical work of the country would cease were we to go back to the home. We make all the clothes made by hand that your wives and children wear. Inside the factories we make 33 4-5 of your hats, suits and overalls. We make 32 per cent of your shoes. We are your tailor one time out of every five. We spin 62 1-3 per cent of your cotton, silk and wool. We weave 48 3-4 per cent of your textiles. We make 44 3-4 per cent of the electrical supplies you use for your hourly comfort. We make 47 per cent of your cigars.

"In the great iron and steel industries for every 1,000 men that go forth to their day's work, 62 women march at their sides. In the chemical industries, we do 44.1 per cent of the work. We are more than one-tenth of the workers in clay, glass and stone. We work in blast furnaces and metal works. More than ninety times
