John Schlyer Son's have on display at their warehouse a wheat storage tank which has attracted considerable attention. The tank is made of galvanized iron and is so constructed that it can easily be moved to any location desired. After it is filled a circular roof fits snugly over the top of the tank and the wheat, corn or whatever grain it may be is safe not only from bugs and rats, but also from moisture. The tank has a series of spouts and when the farmer desires to haul a load of wheat to town he drives his wagon alongside of the tank and opens a slide. The tank bin is filled in the same manner. It can be set up in the field and the wheat can receive the wheat direct from the separator. The cost of the iron tank is said to be less than the cost of a wooden bin.
