

STREETWORK MAY BE BRISK IN 1913

One Street Sure—Several Probabilities—Much Sewer Work

Although but one petition for the improvement of streets has as yet been received by the City Commissioners it is highly probable that as the season advances several more will be submitted. Those that are most likely to fall in line are Walnut street from Lincoln to Steuben, four blocks on North Washington, possibly the same number on North Lafayette, probably about three blocks on South Wilson.

Should these streets be improved it is likely that either brick or concrete will be used for the paving material. A resolution for the paving of West Third street was passed a few days ago, paving not to exceed thirty feet in width. The property owners who are paying for the street seem to be nearly all of the opinion that the street should be thirty-six feet in width on account of the subway which they hope to have through there within a few years. The probabilities are that the resolution will be changed as to the width. Alternate bids will be received for improving the street, with concrete or brick.

West Third street will be paved from South Forest to South Kansas avenue, four blocks, one of which is slightly more than six hundred feet long.

Four sewers are under way in the Second Ward to connect with main sewer number three, and it is likely that several more will be laid within the year. They are not very long but extend the sewer district by a good many blocks.

During the year 1912 a considerable amount of paving and macadamizing was done. The following streets were each finished in the year 1912 although one or two were commenced in 1911.

Four blocks on South Forest were paved with brick, one on West Elm paved with brick, four blocks on South Highland paved with brick, three blocks on South Grant paved with brick and one block on West Chestnut paved with brick.

The following streets were macadamized: West First, two blocks; South Ashby, three blocks; South Lafayette and West Second, eight blocks.

Street work is not scheduled to commence before April 1st.

Hit by His Own Law.

There are worse perils than wild animals in Central Africa, says one who has just returned. Among the natives there are terrible diseases. Some of them are lepers; and sleeping sickness has laid a hold on many of the villages. In one village the local chief had given orders that all suffering from the sickness were to be taken out into the bush and left there, but the people had carried out so many of their relations that they refused to take any more. A few days later the medicine man of the tribe diagnosed that the chief himself had the disease, and immediately the ruler annulled his law so that he could be kept in his own hut.

Balkan Ballads Are Long.

In the Balkan countries the ballad makers have certainly been at least as important as the makers of laws. Serbia's national ballads, commemorating the glories of the Serbian Emperor Dushan, the fatal battle of Kosovo, and the legendary exploits of the hero Marko Kralyevich and his horse Sharata, are of Homeric proportions, and, sung to the accompaniment of a guitar with cords of horsehair tails, have kept national feeling warm for centuries. In recent years the Serbian government published a popular edition. In Macedonia, Sir Charles Elliot heard a schoolboy recite a Bulgarian poem which took an hour and a quarter.

Troubles With Sun Dials.

Sun dials are picturesque objects, but when exactitude is required, that is, scientific exactitude, they are difficult things to adjust. Columbia university is having trouble with a sun dial consisting of a great brass plate on which rests a granite ball seven feet in diameter. When the ball was completed it was found to be a little too small, and now the brass plate on which it rests has to be engraved all over again to fit the ball's dimensions.

Princeton's Wonder.

In Princeton they have a sun dial that is a reproduction of an ancient one of an English university whose trustees presented the Gothic column to Old Nassau. It is so fearfully and wonderfully marked with figures that Dean Fine once explained to a visitor there were only three professors in Princeton who could tell the time by it, and that they could do so only three days in the year, and then the dial would be wrong.

Good Cleanser.

For cleansing glassware, nickel, mirrors, or tinware, take Spanish whiting and wet with cold water to make a thick paste; wet only what you intend to use at the time. Rub this over the article to be cleaned, then let dry; then go over it with another cloth, dry and polish well. The dirt will come off with the whiting and the polish will be very brilliant. This is fine for window glass, as no water is used, and the hands are not wet.

Buzzing Sounds Made by Insects.

The different humming or buzzing sound in insects is caused by the vibration of the wings, and the more rapid the vibrations the sharper the sound. Scientists have estimated that the common house fly vibrates its wings about 335 times a second and the honeybee 400 times, though a tired bee moves its wings more slowly and makes a different sound from a fresh one. The butterfly is content to move more slowly and makes no noise.

"What" Was His Name.

A guild of godparents to save children from incongruous names is being suggested. The late Canon Bardsley, author of a book on English names, told the story of what was probably the most idiotic name ever bestowed upon an unfortunate infant. A woman had her son baptized What, for no other reason than to cause amusement in future years when, being asked his name, he should reply "What."

Making All Happy.

"What I deem an appropriate present is a book, and that I must choose for myself," writes a correspondent of the London Chronicle. "To leave the selection to friends would be a catastrophe. Every year, therefore, on behalf of those generously minded individuals who have kindly thoughts toward me, I buy books for myself, tell them, and get the money refunded. And in the measure of monetary value they remember me, I likewise remember them—in any article of their own choosing. And we are all happy."

True to Nature.

The tots in a primary class in sense-training were imitating anything they choose. When it was Hazel's turn, she stepped into the center of the room and wriggled her body from side to side. No one could guess what she was impersonating, so she was asked to explain. "Why," she said, "I was a little dog wagging its tail."
