

WEEKLY CROP REPORT.

Tobacco Improving and Reported to Be in an Excellent State of Cultivation Throughout the State.

General Review.—Although there has been but little rain and excessively high temperature, the soil retained sufficient moisture from the heavy rains of the preceding week to maintain crops in a healthy growing condition. Except on bottom lands, where planting was greatly delayed by the heavy spring rains, the corn crop has received its last cultivation, and is generally promising. This crop is now entering the critical period and much depends upon the character of the weather during the ensuing thirty days. Wheat threshing is general, and it is turning out very well, though the yield will not be quite as large as was anticipated. Tobacco, especially the late planted, has improved and is generally in an excellent state of cultivation. Tobacco worms are beginning to be troublesome in the central section.

Western Section.—There is no complaint about the weather; on the contrary, it has been favorable for the rapid growth of all crops and for field work. The good effects of the general rains of June 26th and 27th are everywhere apparent. Early planted corn, which has been laid by in good order, has grown rapidly and looks clean, despite the frequent rains. The later planted is somewhat irregular in growth, that in the bottoms being backward. The general crop prospect, however, is good. Tobacco shows marked advancement since last report. In many localities it is almost ready for topping, which will be commenced next week. There is not much complaint of cut worms, but chinch bugs are doing some damage to corn and wheat. The latter cereal is all harvested and a large portion of the crop has been threshed. In some localities the yield is exceptionally large, notably in the counties along the Cumberland and Tennessee rivers, but, generally speaking, the wheat crop is not turning out as well as was expected. The head is light, though the quality is satisfactory. Oats, meadows and clover are being cut. Oats are only fair. Gardens are doing well. A large crop of blackberries is reported.

Discovered by a Woman. Another great discovery has been made, and that too, by a lady in this country. "Disease fastened its clutches upon her and for seven years she withstood its severest tests, but her vital organs were undermined and death seemed imminent. For three months she coughed incessantly, and could not sleep. She finally discovered a way to recovery, by purchasing of us a bottle of Dr. King's New Discovery for consumption, and was so much relieved on taking first dose, that she slept all night; and with two bottles, has been absolutely cured. Her name is Mrs. Luther Lutz. Thus writes W. O. Hamrick & Co., of Shelby, N. C. Trial bottles free at J. James Wood's drug store. Regular size 50c. and \$1. Every bottle guaranteed.

Attractive Women.

Why is one woman attractive and another not? The most admirable and attractive thing about an attractive woman is her womanliness. Everybody admires a womanly woman. She must have health, of course, because without it she would lose the brightness of her eyes, the fulness of her cheeks and her vivacity. Real health must mean that a woman is really a woman. That she is strong and perfect in a sexual way, as well as in every other. That she is capable of performing perfectly the duties of maternity. Some are born with what is called "constitutional weakness." Those who do not enjoy perfect health, need only take the proper precautions and the proper remedy to become perfectly well and strong. Dr. Pierce's Favorite Prescription will cure any derangement of the distinctly feminine organism.
