UNITED STATE MARSHAL'S SALE

No. 15657, Honon & Mosley vs. Louisiana Delta Lands Co., et al. In the United States District Court for the Eastern District of Louisiana.

By virtue of a writ of Fieri Facias to me directed in the above entitled suit, I will proceed to sell to the highest bidder on Saturday the 18th day of August, 1917, at the main entrance to the Court House at Hahnville, St. Charles Parish, Louisiana, the following described property, viz:

Fifty four lots of ground in the Parish of St. Charles, Louisiana, designated as Lots 1 to 54 inclusive, of Division 11, Lots 1 to 22 inclusive, of Division 10, Lots 1 to 16 inclusive, of Division 11, Lots 1 to 4 inclusive, of Division 12, and Lots 1 and 2 of Division 13, all as so designated on the plan of John Morrison C. B., dated December 1, 1914, of the Louisiana Delta Lands Company's subdivision of District No. 1 of St. Charles Municipal Drainage district, being fractional section 9 and portions of Sections 4 and 5, Township 15, South Range 20 East, which lots aggregate 591.15 acres.

Terms: Cash, at the time of sale. Frank M. Miller, U. S. Marshal.

(Adv. July 14, 21, 28, August 4, 11, 18)

BETTER FARMING

Many farmers in St. Charles Parish will select their seed corn in the fields this year, and this simple act will mean a great improvement in the value of their crop. The difference in the value between field selection and crop selection is from 3 to 5 bushels per acre in the yield of the crop, without any additional effort on the part of the cultivator. However, the farmer who shows interest enough to practice field selection, generally tries to give the crop from such better attention than usual with result that the difference in yield is greater than the above figures. The fact that his seed is selected encourages him to try better preparation, earlier thinning to a stand and also he generally manages to give the crop one or two cultivations more than is customary, all of which means "more corn".

It would be a fine thing for St. Charles Parish if every farmer here would make this effort towards "Better Farming," and your County Agent will be pleased to come and help select seed for you whenever you are ready to do so. Write to him at Hahnville, La. Geo. W. Bohne, County Agent

FALL WEBWORM IS CAUSING MUCH DAMAGE

A serious outbreak of the fall webworm has occurred in portions of southern Louisiana, the caterpillars being found grown about July 1st. Injury is especially severe on wicot, gum, pecan, pear, persimmon, mulberry and peach trees. After devouring the foliage of which they are especially fond, the caterpillars feed upon a great variety of plants, including some field and garden crops.

It is possible that the next generation of caterpillars which will appear shortly will also be a very destructive one in Louisiana. Farmers should watch for the appearance of the small, young caterpillars, which form over the foliage upon which they feed, says T. H. Jones, entomologist assistant, U. S. Department of Agriculture. "Spraying the cultivated trees, shrubs, vines, and other plants upon which they appear, with an arsenical poison will kill the caterpillars and prevent further damage. For this purpose a solution of lead at the rate of three pounds of the powder form or six pounds of the paste form to fit gallons of water is recommended. Spraying should be done when the worm are small—as soon as possible after they have issued from the eggs—in order that its little vegetation as possible be destroyed.—L. S. U. Press Bulletin

PREPARATION IN ANIMAL PRODUCTION

Livestock Should Be Held and Put in Good Condition For the Market.

It has been the custom for cattlemen of Louisiana to sell out all their steers and other stocker cattle during the winter and spring, and to carry but a limited herd of breeding stock, yearlings and calves during the summer. With the prices of cattle advancing all who have cattle and sufficient summer pasturage are advised to keep them. Prices are not likely to decline. All the cows and heifers of suitable age should be bred to produce beef bulls and kept in the best possible condition until fall. Then let them run in the stalk fields, and after frost turn them on velvet beans, either with or without corn left in the field. Ninety per cent of the cattle received in New Orleans since January are reported to have been fed on velvet beans in this way, and cattle so fattened have brought prices ranging from nine to twelve cents. There will be no question about profitable markets for the pastures and velvet bean fields if the farmer has the cattle to feed them to. It will be a good plan to keep one steer for every acre of beans.

Sows Should Be Bred To Farrow Before Winter.

The best hogs have been selling recently for over sixteen cents a pound on the central markets and have netted Louisiana shippers twelve and one-half cents a pound weighed right out of the feed lots. Based on present prices, it is not wise to sell for less than ten cents a pound any hogs that can be finished for market within eight or ten months, or any good breeding stock that may be needed on the farms. All sows should be bred to good bears so as to farrow before winter, thus increasing the number of pigs on the farms as far as possible. Keep the hogs in fenced pastures or on grazing crops where they can get plenty of green stuff and give them just enough grain to keep them in a thrifty and growing condition so as to be ready to run in the corn and pea fields, soy beans and sweet potatoes in the fall, and placed on velvet beans, with or without the cattle, after the first frost. Keep posted on the livestock markets for the class you have for sale. Before selling or shipping hogs confer with the demonstration agent as to the best markets and time for shipping.

Poultry and poultry products may be quickly and economically increased. Keep all vigorous pullets from early hatches for egg production. Dispose of all cockerels of the light, active breeds, such as Leghorns and Orpingtons, as soon as possible after they have made their most economical growth, that is, when they reach the two or two and one-half pound stage. Caponize all vigorous cockerels from the medium or heavy breeds, such as Plymouth Rocks, Wyandottes, Rhode Island Reds, Orpingtons, etc., and feed for growth to the six or eight pound stage. Continue hatching chicks through May and June for developing into table poultry. Destroy all lice, mites, and intestinal parasites so the chickens will get full benefit of the feed. Keep all male birds away from the laying hens after the breeding season is over, thus producing infertile eggs, which will not spoil as readily as fertile eggs.—G. E. Nesom, Live Stock Extension Service, Louisiana State University.

THE SOY BEAN WILL SERVE MANY PURPOSES

May Be Grown For Money Crop, Forage, and Soil Improver—Will Follow Oat Crop.

The soy bean is a very valuable crop to grow at any time. It may be utilized as a "money crop" where the seed are harvested and sold to the oil mills. It thus contributes to the food supply. Twenty bushels of seed per acre is a reasonably good yield, and at the present price this yield would bring a fair profit when the low cost at which the crop may be grown is considered.

Probably the greatest value of the soy bean, on the whole, however, is as a forage crop. When grown for this purpose it should be planted thick in the row and cut for hay. It makes a feed almost equal in value to alfalfa hay. The harvesting period is usually the latter part of August or the first of September, when fair weather usually prevails. Difficulty is frequently experienced in obtaining good seed for planting, and a poor stand of soy beans is common. To guard against this, the germinative quality of the seed should be tested before planting and the planting should be done with care. Failure will result if the land for soy beans is poorly prepared. The land should be well plowed and pulverized, and the seed planted not more than one inch to one and one-half inches deep. The planting may be done up to the middle of July, and on this account it is one of the best crops to follow the oat crop. On poor land the rows should be from two to two and one-half feet wide, and on fertile soil from three to three and one-half feet. Planting should be done with a corn or pea planter and about one-half bushel of seed used per acre. If properly planted no hoeing should be required by this crop and it will need only two or three cultivations.—W. R. Perkins, Extension Division, Louisiana State University.

United States of America, Eastern District of Louisiana, ss.

In the United States District Court in and for said District New Orleans Division

In the matter of George E. Cleveland, Bankrupt No. 2159 In Bankruptcy Petition for Discharge Order of notice hereon

Eastern District of Louisiana, Parish of Orleans, ss:

On this 25th day of June A. D., 1917, on reading the foregoing petition it is Ordered by the court that a hearing be held upon the same on the 27th day of July A. D., 1917, before the said court, at New Orleans, La., said District, at 10 o'clock in the forenoon; and that notice thereof be published in the St. Charles Herald, a newspaper printed in said district and that all known creditors and that all other persons in interest may appear at the said time and place and show cause, if any they have, why the prayer of the said petitioner should not be granted.

And it is further ordered by the Court that the clerk send by mail to all known creditors, copies of said petition and this order, addressed to them at their places of residence as stated.

Witness the Honorable Rufus E. Foster, Judge of the said Court and the seal thereof, at New Orleans, La., in said district on the 25th day of June A. D. 1917

SAVE THE HOGS; THEY WILL BE MUCH NEEDED

Some Facts About the Use and Abuse of Hog Cholera Serum—Sanitary Measures Are Necessary.

The cry of the nation, and of the world, today, is for food and yet more food; and anyone who can, in any way, conserve and increase the food supply of the people at this time is a true patriot.

To suggest that we should save our hogs, at any time, but more especially in the country's present crisis, may seem quite uncalled for, or even ridiculous. However, there are one or two points in this connection which may be overlooked, and will bear stressing. The first is with reference to the use and abuse of serum. Serum, as every hog owner knows, is a valuable protective agent against hog cholera, the demand for which seems to be on the increase; and from all accounts, the State serum plant is having all it can do to meet the requests for serum that come to it.

The intelligent and judicious use of serum is all right, and is to be commended. But may there not be some hog owners who order serum when not really needed, or order quantities far in excess of what they actually require at the time? If so, and we think it not improbable, it means a waste of serum, and is probably depriving others of its use on account of a temporary shortage of the supply thereby occasioned.

In intelligently conserving the serum supply, therefore, it means conserving and increasing the people's food supply in hogs. On the other hand, the one who, through the wasteful use, or abuse, of serum, deprives some one else of its use in trying to save his hogs, is not only not aiding conservation, but the very opposite.

The second point is, the adoption of strict sanitary measures in connection with hog cholera. The man who does not effectually destroy his cholera-infected carcasses, but permits them to lie around exposed to be the means of spreading infection to his own still healthy hogs, and to his neighbor's herds, is surely not using his best efforts to conserve and increase the hog supply, and, therefore, the food supply of the people in hogs and hog products.

And the same may be said with regard to thorough disinfection of cholera-infected premises, etc., in order to destroy infection and keep it from spreading and killing more hogs with cholera.

In other words, the man who uses every endeavor to save the lives of his own hogs, and those of his neighbors, is a patriot in the truest sense of the term, as he is showing that he is trying his best to conserve and increase the nation's food supply in hogs.

There are many ways in which we can display our patriotism; and this is a most important one which should not be overlooked by our hog owners at this time of the country's stress.—W. H. Dalrymple, Louisiana State University.

Do you eat enough of this?

The great benefit in health and strength that always is enjoyed by regular eaters of good oatmeal is known the world over. Every year there are more and more eaters of Quaker-Scotch Oats, which is recognized in this country and in Europe as the one perfect oatmeal. Quaker-Scotch Oats packed in tins keeps fresh and sweet in any climate for any length of time.

NOTICE

The Board of State Affairs will sit as Board of Equalization and to consider the abstract and assessment of this Parish on Friday July 27th 1917

The best of the good ones.

All the experiments of the Government food experts and the athletic trainers of Yale University prove that oatmeal eaters are the strongest and healthiest. Quaker-Scotch Oats stands at the head of the list of cereal foods. It is not only the best food, but it's the cheapest food on earth. Packed in tins it will keep sweet and fresh anywhere indefinitely.
