Clerk of Court I. T. Boudoin and Supt. J. B. Martin were visitors to New Orleans during the week.

## BETTER FARMING

Now that our fall truck crops are well under way and are doing as well as the dry weather will permit them to do, we should give some attention to spraying the crops so that the present damage does not take away the profits of the season's work. The long dry summer has been well nigh perfect for the propagation of insects of all kinds, and unless we do some thing to lessen the ravages, most of the crop will be harvested by the hoards of insects which now infest our fields. Cabbage plants all over the parish are covered by looper, and young plants are being set on worms and A. Spraying with A. senate of Lead or Corom Dry will prevent this great damage to the cabbage crop and will mean a much larger return to the farmer who is foresighted enough to adopt the remedy.

Spraying is a necessary part of trucking. If we are to make a success of trucking in this locality we must make up our minds to do as is done in other sections where vegetables are successfully raised. Why should a farmer prepare his land, buy seed, set out plants and then cultivate and fertilize them—just to feed to insect pests. It is an unreasonable proceeding, and we will have to learn to spray or the insects will put us out of business. Spraying is not hard work, it takes less labor than to cultivate the crops, and I have seen many fields this fall that needed spraying much worse than they needed cultivation. When eaten cabbage does not make an attractive shipment on the market and this same is true of all other truck crops. The remedy lies in spraying.

Spraying saved the citrus fruit meaus in California, Florida and also in South Louisiana. Spraying saved the cucumber and melon crops in Jefferson Parish last season. Spraying has saved the potato crops in all sections of the United States on many occasions and spraying will save and make more profitable the truck crops of St. Charles Parish if we apply ourselves diligently and intelligently to this work. Driped plants are in or easily handled than broadcasted plants when spray time comes, so it is a good policy to give drilling the preference. A broadcasted bed can sometimes harbor enough insects to ruin a field, in king additional spraying necessary.

Geo. W. Bohac,  
County Agent

## FARMERS AND STOCKMEN SHOULD NOT DISPOSE OF THEIR FEMALE ANIMALS.

By Dr. Dalrymple

The prices obtainable for cattle and hog at the present time offer a strong inducement to sell, even the female stock, which is difficult to overcome. And yet, if owners will give a little thought to the future, their better judgment will certainly suggest the retention of a sufficient number of the younger female animals, especially, to maintain the supply and meet the demand for next year at least, if not for longer, which will undoubtedly be great owing to war conditions. It is a fact that, while many cat-

## DO NOT BUY THE YOUNG FEMALE STOCK

Peer Practices in Sale of the Present High Prices

The writer is not to make this suggestion from information received from great numbers of cattle and hog raisers in the state, but from the fact that the present high prices for young female stock is a great temptation to buy, even the female stock that is hard to overcome. And yet, if we give a little thought to the future, we will find that it would be profitable to retain the younger female animals to maintain the supply and meet the demand for next year at least, if not for longer.

If this practice is persisted in, it is going to result in a shortage of young animals when they may be needed even more than at our present time. In other words, it is not going to conserve the meat supply for ourselves and our children, but it is going to be the most profitable to stock owners themselves.

It may be quite a temptation to get rid of a reasonable number of the old and unproductive female stock, but there should be a right line drawn at the younger female stock, if we hope to maintain and increase the supply, and meet the future demands for meat animals, which is not only a common sense proposition, but a profitable one, and a patriotic duty demanded of our people in the present war crisis, in which our country is a participant.

## NURSES NEEDED FOR TRAINING SCHOOLS NOW

The Committee on Nursing of the Council of National Deans calling for trained nurses. Volunteers are needed, not for the fighting line, but for the "rear" training schools for nurses in the United States. At present there are in the United States approximately 200,000 registered nurses, of whom only 6,000 are public health nurses. America needs a far greater number of trained women, and in the prevention of disease epidemics, for industrial accidents, and for the general preservation of public health. Nevertheless, this available supply is being cut down rapidly by war requirements. Thousands have gone voluntarily to France and other have gone in to public work, directly or indirectly, related to the war.

## RECENT CHANGES IN THE NAVY

1. Wife, children, or widowed mother of a man in the Navy are now provided for.
2. The health and medical plan of insurance, both for disability and death for men in the Navy is now administered by the Government.
3. All pay has been raised throughout the War and for six months after.

## SAVE FEED BY USING THE SUO

The silo saves the best means of conserving the farm feed supply. It enables the farmer to store the feed for the future use of his farm animals. In such the silo machine that the cutting machine enables the housewife to save the vegetables and fruits for the future use of the family. The present and prospective high prices and the growing demand for farm products of all kinds make it at once to the profit and the duty of farmers to increase in every way the efficiency of their operations. To the dairy farmer, at least, the silo is essential to efficiency. Its advantages are too numerous to fully enumerate here. Suffice it to say that experiments have proved that silage will greatly reduce the cost of feed for dairy cows and increase the milk production. It is a palatable feed, keeps the stock in a healthy condition, and the young stock growing all winter. It is more conveniently fed than hay or corn fodder. Silage enables one to keep a larger number of live stock on a given area of land than may be kept on forage crops cut for hay. It furnishes excellent feed during the summer when droughts frequently occur. It prevents the waste of corn cobs, stalks and overripe fodder that would otherwise not be eaten by the animals.

If you contemplate building a silo, write to the Extension Division of the Louisiana State University, Baton Rouge, for complete information, which will be furnished free of charge.

## IS THE COMMON CUR WORTHY OF HIS KEEP?

The writer is a lover of the dog. However, there are dogs and dogs, and the greatest drawback to successful sheep husbandry in Louisiana, by keeping the majority of our farmers from raising sheep and wool, is the useless and worthless dog. Therefore, the important question at this time is, can we afford to permit the worthless dog to stand in the way of our increasing the mutton and wool supply of our people, which is, and will continue to be, so urgently needed?

Further, a lot of useless dogs, around country places especially, are not only liable to get the sheep-killing habit, but they have to be fed, and much of the food they consume is in the nature of human diet which might be used for that purpose. In fact, it has been estimated that the dogs of this country consume enough food of this character that would feed an army of more than two million men.

## SAVE GOOD OATS FOR PLANTING SEED

Farmers are that the supply of seed oats for planting this fall will be very short, and Louisiana farmers who have raised oats of good quality are urged to save them for seed rather than to feed them. In many parts of the South the oat crop winter killed, and the farmers will have to purchase all their seed from other localities, and those favored sections, when a partial or full crop was produced should save every available bushel to meet this demand.

More milk in the diet of the average family would help cut down the high cost of living in the city as well as in the country. Milk is one of the cheapest of animal foods.

I hereby certify that the above list was adopted by the regular Jury at the meeting held on the 3 day of Aug. 1917.
