MUTAULLIFE INSURANCE COMPANY

OF NEW YORK,

OFFICE 111, BROADWAY, TRINITY BUILDING.

NETT ACCUMULATED FUND, FEBRUARY 1, 1853

\$2,018,775 64!!

THIS Company has now established itself on such a

firm basis, that it can offer to those desiring an investment on their lives, that greatest of all desideratums in life insurance, viz: full and perfect security. Its his tory is almost, if not quite, without a parallel. Commencing 1st February, 1843, (10 years ago.) without a dollar of capital except its receipts for premiums, it has now an actual cash capital which is "invested in Bonds and Mortgages on Real Estate, principally in the cities of New York and Brooklyn, worth double the amount loaned thereon, of over \$2,000,000. Its receipts for premiums during the past five years have been nearly \$2,200,000, and for interest on investment over \$350,000, and has paid on policies terminated by death during the same time, nearly \$800,000. Its dividends (after reserving a fund sufficient to re-insure all out-standing policies) were 52 percent the first five years, and 33 1-3 per cent. the last five, on the amount of premiums paid, being an average of over 42 1 2 per cent per annum for ten years These dividends are added to the policy at their reversionary value, payable at death with the amount insured, or can be applied to the reduction of future premiums, at the option of the insured. The business of the Company is conducted strictly on the cash plan—no credits—and it is believed to hold out greater inducements than any other company, whatever.

Its rates of premium are as low as those of any good office, and are believed to be lower than some who profess to insure from 25 to 50 per cent less.

GARDENING AND GARDEN SEEDS.

GARDENING AND GARDEN SEEDS.

GARDEN SEEDS, true to their marks, perfect in their production, and possessing vitality, are not only of the highest importance to the cultivator, but the dealer is also interested in having those of the first quality, as on this his reputation and success depend. Yet the dealer and the seed grower are often blamed when not in fault; for good seeds will often fail, from unfavorable circumstances. They may fail from the ground being too cold and wet, or from its being too hot and dry. Lying in a dry soil, exposed to a scorching sun, their vitality is soon destroyed. Many hard seeds, as carrot, parsnep, etc., should have the soil rolled or pressed upon them otherwise they are liable to fast.

Sometimes the tender plants start well, and, in the course of one or two days, and before the owner gets view of them, they are all eaten by insects, and the seeds man is blamed. Again, insects devour them before they come out of the ground. Seeds may be buried too deep to vegetate; and shallow planting, on a dry soil, in hot weather, is very liable to failure. Powerful manures, such as hen or pigeon dung, guano, chemical manures, and those under powerful fermentation, may destroy seed with which they come in contact. Seeds often fail, from poverty in the soil. When there are so many causes of failure, it is not remarkable that failures occasionally take place; and the cultivator should investigate these subjects thoroughly, and not blame the seeds man without reflection and candor.

In the selection of my seeds, great care is taken to have only those which can be relied upon, and raised by experienced growers; and those kinds which cannot be raised in this country without much difficulty and uncertainty, are imported from the most reliable sources in Europe.
