SCIENTISTS COMPLETE WORK OF INVESTIGATING THE RELATIONS, ORIGIN
AND RACIAL CHARACTERISTICS OF PRIMITIVE TRIBES AT WORLD'S FAIR

The results of the investigation, it is proudly announced, by the scientific
workers, who have spent months in the study of the primitive tribes at the
World's Fair, are now complete. The workers, under the guidance of
Professor John A. Logan, of the University of Missouri, and of Professor
Charles A. F. Hoxie, of the University of California, have spent many
months in the study of the primitive tribes at the World's Fair. The work
was conducted under the auspices of the Explorers' Club, and was started
in the spring of last year.

The results of the work were determined by the method of the vertical
tests, and were then compared with the vertical tests of the primitive
tribes. The results were then compared with the vertical tests of the
primitive tribes, and the results were then compared with the vertical
tests of the primitive tribes. The results were then compared with the
vertical tests of the primitive tribes, and the results were then compared
with the vertical tests of the primitive tribes. The results were then
compared with the vertical tests of the primitive tribes, and the results
were then compared with the vertical tests of the primitive tribes. The
results were then compared with the vertical tests of the primitive
tribes, and the results were then compared with the vertical tests of the
primitive tribes.

The results of the work were determined by the method of the vertical
tests, and were then compared with the vertical tests of the primitive
tribes. The results were then compared with the vertical tests of the
primitive tribes, and the results were then compared with the vertical
tests of the primitive tribes. The results were then compared with the
vertical tests of the primitive tribes, and the results were then compared
with the vertical tests of the primitive tribes. The results were then
compared with the vertical tests of the primitive tribes, and the results
were then compared with the vertical tests of the primitive tribes. The
results were then compared with the vertical tests of the primitive
tribes, and the results were then compared with the vertical tests of the
primitive tribes.

The results of the work were determined by the method of the vertical
tests, and were then compared with the vertical tests of the primitive
tribes. The results were then compared with the vertical tests of the
primitive tribes, and the results were then compared with the vertical
tests of the primitive tribes. The results were then compared with the
vertical tests of the primitive tribes, and the results were then compared
with the vertical tests of the primitive tribes. The results were then
compared with the vertical tests of the primitive tribes, and the results
were then compared with the vertical tests of the primitive tribes. The
results were then compared with the vertical tests of the primitive
tribes, and the results were then compared with the vertical tests of the
primitive tribes.

The results of the work were determined by the method of the vertical
tests, and were then compared with the vertical tests of the primitive
tribes. The results were then compared with the vertical tests of the
primitive tribes, and the results were then compared with the vertical
tests of the primitive tribes. The results were then compared with the
vertical tests of the primitive tribes, and the results were then compared
with the vertical tests of the primitive tribes. The results were then
compared with the vertical tests of the primitive tribes, and the results
were then compared with the vertical tests of the primitive tribes. The
results were then compared with the vertical tests of the primitive
tribes, and the results were then compared with the vertical tests of the
primitive tribes.

The results of the work were determined by the method of the vertical
tests, and were then compared with the vertical tests of the primitive
tribes. The results were then compared with the vertical tests of the
primitive tribes, and the results were then compared with the vertical
tests of the primitive tribes. The results were then compared with the
vertical tests of the primitive tribes, and the results were then compared
with the vertical tests of the primitive tribes. The results were then
compared with the vertical tests of the primitive tribes, and the results
were then compared with the vertical tests of the primitive tribes. The
results were then compared with the vertical tests of the primitive
tribes, and the results were then compared with the vertical tests of the
primitive tribes.

The results of the work were determined by the method of the vertical
tests, and were then compared with the vertical tests of the primitive
tribes. The results were then compared with the vertical tests of the
primitive tribes, and the results were then compared with the vertical
tests of the primitive tribes. The results were then compared with the
vertical tests of the primitive tribes, and the results were then compared
with the vertical tests of the primitive tribes. The results were then
compared with the vertical tests of the primitive tribes, and the results
were then compared with the vertical tests of the primitive tribes. The
results were then compared with the vertical tests of the primitive
tribes, and the results were then compared with the vertical tests of the
primitive tribes.

The results of the work were determined by the method of the vertical
tests, and were then compared with the vertical tests of the primitive
tribes. The results were then compared with the vertical tests of the
primitive tribes, and the results were then compared with the vertical
tests of the primitive tribes. The results were then compared with the
vertical tests of the primitive tribes, and the results were then compared
with the vertical tests of the primitive tribes. The results were then
compared with the vertical tests of the primitive tribes, and the results
were then compared with the vertical tests of the primitive tribes. The
results were then compared with the vertical tests of the primitive
tribes, and the results were then compared with the vertical tests of the
primitive tribes.

The results of the work were determined by the method of the vertical
tests, and were then compared with the vertical tests of the primitive
tribes. The results were then compared with the vertical tests of the
primitive tribes, and the results were then compared with the vertical
tests of the primitive tribes. The results were then compared with the
vertical tests of the primitive tribes, and the results were then compared
with the vertical tests of the primitive tribes. The results were then
compared with the vertical tests of the primitive tribes, and the results
were then compared with the vertical tests of the primitive tribes. The
results were then compared with the vertical tests of the primitive
tribes, and the results were then compared with the vertical tests of the
primitive tribes.

The results of the work were determined by the method of the vertical
tests, and were then compared with the vertical tests of the primitive
tribes. The results were then compared with the vertical tests of the
primitive tribes, and the results were then compared with the vertical
tests of the primitive tribes. The results were then compared with the
vertical tests of the primitive tribes, and the results were then compared
with the vertical tests of the primitive tribes. The results were then
compared with the vertical tests of the primitive tribes, and the results
were then compared with the vertical tests of the primitive tribes. The
results were then compared with the vertical tests of the primitive
tribes, and the results were then compared with the vertical tests of the
primitive tribes.
