

Cat D6 Tractors each pull 8 bottoms on this job near Billings. Do you know any other ordinary 75 DBHP tractor than can pull 8 to 10 plows with power to spare?

BIG TIME and MONEY SAVERS

Think what it can mean to you to pull 8-10 plows this spring behind your Cat D6 Tractor: You'll watch 40-50 acres or more turn black behind you every day. You'll finish up plowing sooner — get your crops in at the best time. You'll get your work done without the annoyance of being stuck. You'll have free time left over to take on more acreage or help your neighbors who didn't make it. You'll have time to improve your farm and ranch — renovate range, clear ground, build stock tanks, establish an irrigation system. You'll get along with less help and work fewer hours yourself.

For reasons like these, you see plenty of Cat Diesel Tractors at work in Montana, and you'll be seeing many more in the future.

Get a head start on your neighbors this spring — and over the years ahead. Probably you've been considering owning a Cat Diesel Tractor — you'll own one in the years ahead. Why not right now? We have both new and used tractors and are eager to make a good deal with you.

Check these CAT Diesel Tractor Advantages:

- Burn lowest cost fuel — No. 2 furnace oil — yet get up to 10% more power from every gallon — a big savings over other diesels requiring premium grade fuels. Burns fuel cleanly without fouling.
- Long life — Cat Diesel Tractors last longer. Frequently go 7 to 10,000 hours before major overhauls — many have lasted 100,000 hours or more.
- You get many built-in extras — sure, independent starting systems.
- Entirely Caterpillar designed and built — engine, transmission, final drive and tracks are entirely built by one manufacturer.
- We'll demonstrate the tractor you need right out on your farm or ranch — you pick your toughest soil condition — you take the controls. Name the date — we'll demonstrate!
