HOME-MADE HONEY-GATE

From Poughkeepsie, N. Y., some time ago we read an interesting description of a home-made honey-gate, and are allowed to give it in the form in which it was communicated to us.

Mr. N. O. S., of that place, says:—

Last year I built a honey-gate that worked very well, and I would like to give the directions for making one. First, make the frame; next, make the box; then, make the gate; and, finally, paint the gate. The frame is made of the same material as the box, and is fastened to the box with hinges. The gate is made of the same material as the box, and is painted black. The frame is fastened to the box with hinges.

The honey-gate is made of the same material as the box, and is painted black. The frame is fastened to the box with hinges.

A Home-Made Brooder.

When the frame is made, the honey-gate is fastened to the box with hinges. The gate is made of the same material as the box, and is painted black. The frame is fastened to the box with hinges.

The honey-gate is made of the same material as the box, and is painted black. The frame is fastened to the box with hinges.
