

MOST ESSENTIAL UTENSILS FOR TOURING

Tent and Cooking Kit Are Important for Camping Out.

Camping out is one of the great privileges available to all who motor and at this season thousands of motor car owners are planning their expedition afield.

For those who expect to enjoy camp life for the first time, the Touring Bureau of the National Automobile Club, California, issued a few suggestions. Here they are:

Travel light, is the first rule of camping equipment. Don't attempt to carry all the household furniture along if you really want to enjoy your outing.

The essentials include a good tent or a comfortable bed arrangement within the car; a good stove, beds and bedding, a compact kit of kitchen utensils and a few tools.

Good Tent Essential.

The choice of a tent is important. The tent should be light, compact and easily erected. A canvas floor is well worth while and tent pegs should be of metal. Cots, folding into small form, are better than heavier springs.

Folding mattresses add to the comfort of the night's rest. Blankets are easily carried and pack well. Take plenty of bedding, as nights in the mountains even in midsummer are usually cool.

The real woodsman would probably scorn an up-to-date stove of the gas-

oline type such as is now turned out by the camp goods factories, but wood is scarce in many of our forest reserves, and the path of easiest resistance is to provide yourself with a dependable stove with folding oven attached. The gasolene stove is ideal, particularly for short trips, and the camp fire doesn't have to be disturbed for meals.

Cooking Kit.

A complete cooking kit of aluminum utensils nesting into the largest pan makes for camp efficiency and occupies the least room. Food should be carried in tin cans and a vacuum bottle comes in handy for a hot lunch along the way between camp grounds or out on a hike.

Don't carry with you articles of value. It's far cheaper to invest in a complete camp cooking outfit and use it only for camping expeditions than to leave some of the family silver out in some remote part.

A water bag should be a part of the camp equipment, and extra gasoline and oil carried on the running board is a safeguard against trouble and delay.

The lighter you travel, provided you have the essentials along, the easier it will be on car and passengers and the more enjoyment you will get from your expedition.

FISHER BODIES GENERAL MOTORS

LOOK AT THE NEW CARS AND SEE—BODY BY FISHER

The new car announcements of General Motors have swept Fisher into the greatest eminence in motor car history.

Everywhere you see the emblem—Body by Fisher. In all price classes, it is the inescapable badge of quality. The leaders, such as Cadillac, Buick, Chevrolet, Oakland, Oldsmobile and Pontiac, all display as one of their proudest assets the symbol—Body by Fisher.

It is their assurance of public satisfaction—in safety, in charm of line, in beauty of color and appointment, in comfort and convenience.

Fisher—the greatest body builder in the world—stands head and shoulders above all others in quality. The new General Motors cars all help to prove Fisher leadership.

LEFT SIDE SAFE ON THE HIGHWAY

Parents Also Urged to Caution Children Against Begging for Rides.

With the summer outing season in full swing, pedestrians on the highways are urged to follow the rule of walking on the left side, in a Minnesota highway bulletin.

"Walking on the left side of the road has been advocated for some time by police and highway officials who have made a study of automobile accidents, yet a large number of people continue to use the right side of the road when walking," says the bulletin. This makes it impossible for them to see vehicles approaching on their side of the road. The motorist may see the pedestrians, but he can never be sure which way they are going to turn. If he meets another vehicle just as he is about to pass a hiker, it may be impossible for him to turn out without striking one of them.

Begging for Rides.

"The habit of asking for rides should also be discouraged. Police in a number of cities have often issued warnings against the practice. Most motorists would be glad to give pedestrians an occasional lift, but the habit of asking for rides has been so much abused that many drivers as a matter of self-protection refuse all requests to give strangers a ride. Parents should be urged to caution their children against asking for rides. The practice is exceedingly dangerous when youngsters stand in the traveled portion of the street or highway and signal for a ride."

Pedestrians Involved.

An analysis of the motor vehicle accidents made for the recent Hoover safety conference showed that pedestrians were involved in 29,982 out of 47,128 accidents reported in the state of New York in 1925, and that of 1,891 persons killed, 1,155 were pedestrians. The report further shows that 50 per cent of the motor vehicle accidents and 65 per cent of the fatalities occurred on straight, level roads.

Adjusting Motometer Is Rather Difficult Task

It is a common opinion that the proper way to collect the fluid in the indicating tube of the motometer, if it becomes separated, is to stick the stem of the instrument in boiling water. This is an erroneous opinion, as it will never gather the fluid. The fluid is separated due to the fact that the instrument was left lying on its side and air bubbles formed. It remains separated until it is restored to perfect working order, even though the instrument is put in an upright position.

This is correctly accomplished by holding the motometer in an upright position and quickly tapping the bottom of the instrument on the spare tire of the car until the liquid is gathered.

Schoolboys Make Novel Safety Street Device

To insure motorists observing the sign, "School Street" "Slow Down," in front of their schoolhouse, boys of

Protection Against Motorists.

a carpentering class of San Diego (Calif.) school have built this unique dummy and firmly implanted it in the middle of the street. At first glance it appears to be a policeman holding aloft the warning sign.

Cost of Running a Car Not Fixed by Cylinders

Engineers have debated the relative cost of operation of an eight-cylinder motor as against the six. Here is the comment of one expert: "The expense of running a motor doesn't depend so much on the number of cylinders as it does on the number of cubic inches of piston displacement. "Take a given piston displacement and divide it up any way you want to, into two cylinders, four cylinders, six or eight cylinders and you will use just about the same amount of gas."

"Of course, the greater the number of cylinders, the more overlapping of power impulses occurs and the smoother the operation of the motor. But don't make the mistake of thinking that additional cylinders mean additional expense, unless the piston displacement is increased."

AUTOMOBILE HINTS

The mythical "man in the street" is no myth to the driver who is trying to keep his record clean.

At night a parked car should have its lights turned on to show a white light ahead and a red one behind.

Seventy-six per cent of all motor cars sold in the United States are bought on the deferred-payment plan.

Thirty-six world records are said to have been broken during a non-stop run by an automobile over the Monza track in Italy. The car covered 14,916 kilometers (9,268.35 miles) in 144 hours.

Ultimate in Class Spirit

The one surviving member of Amherst college's class of 1861 held a reunion all by himself, elected himself president and secretary, at his dinner and adjourned himself. He is Rev. Edwin A. Adams of Walpole, Mass., and no alumnus is more loyal to alma mater.—Brooklyn Eagle.

Freight Train Phone Latest in Railroad

By means of a telephone connecting the caboose and the cab of a freight train with 73 cars, the engineer and conductor of an Eastern line held conversation recently, saving the need for hand signals and speeding the progress of the train.

As they were pulling out of the yards, the conductor notified the engine men that a car repair man was riding in the caboose and would get off at the east end of the yard and close the switch when the train was in the main track.

This saved slowing up, and later the engineer notified the conductor that, if conditions were satisfactory with regard to the train, he would not stop for water at the next station. Permission to proceed was given, sparing another delay. The wires were strung over the tops of the cars.—Popular Mechanics Magazine.

Cemeteries in Turkey Made Social Centers

One of the gayest and most colorful spots of Constantinople is the cemetery. Not only is it a garden where shady cypress trees form an ideal retreat for hot summer days, but it is filled with flower beds, little pagodas, winding paths, green lawns and refreshment peddlers, says the Atlanta Constitution.

It is a sort of social center. Maids take their charges there for an afternoon's outing. It is a rendezvous for the officers of the garrison with the little cocottes from the city. A Moslem religious teacher will often go there with his whole class to continue his instructions in the Koran. And toward twilight, with the crescent moon throwing a silvery sheen over the tree branches, it becomes a garden of Aphrodite for a thousand lovers.

Giant English Ox

England has always been famous for her pure-bred cattle and sheep. Nearly 300 years ago huge oxen were produced there. In his diary, Evelyn speaks of an ox that was nineteen hands high and four yards long, and that was in 1649. At that date Leicestershire sheep had already obtained a great reputation and fetched big prices. The marvelous sheep of New South Wales, one of which recently yielded forty-five and one-half pounds of wool at a clip, are of purely British descent.—Capper's Weekly.

New Dishwasher-Sink

A dishwasher-sink has been invented. In the middle of the bottom of the sink is a large opening which is closed by a cover-plate when the dishwasher is not in use. Beneath the opening is a wire-net basket held in a cylindrical metal container.

Skyscrapers Safe

Prof. Bailey Willis, noted seismologist of Leland Stanford university, asserts that good engineering and good construction make American skyscrapers safe in case of earthquake.

There is nothing more satisfactory after a day of hard work than a line full of snowy-white clothes. For such results use Red Cross Ball Blue.—Advertisement.

Differences in Love

"Man is the hunter; woman the quarry. Once a woman has given all, she longs to go on giving. Once a man has taken all, the quest loses savor. Woman pours out her love from a never-emptying chalice. Man dashes the cup to the ground once he has drained it," writes Jane Cowl, eminent American actress, in an article in Liberty.

Indians Increase

The Department of the Interior says that the Indian population is approximately 350,000. This represents a gain during the past 12 years of about 19,000, while during the fiscal year ending June 30, 1925, the increase was 2,693. These figures apply strictly to the United States, Alaska, with a large Indian population, is omitted.

Go to a friend for sympathy—to a pawnbroker for a loan.

GET-AWAY

You must try Champion Spark Plugs to prove how the hotter, more intense spark they produce increases the rapidity of your get-away. Why be left behind when the traffic signal flashes when a set of Champions will put you out in front!

Champion X—exclusively for Fords—packed in the Red Box 60c Each

Champion—For cars other than Fords—packed in the Blue Box 75c Each

Beauty Of Hair and Skin Preserved By Cuticura Soap to Cleanse Ointment to Heal
