England Is Termed "Beautiful Country" By Returning Youth

"England is a beautiful country and its people, despite the horrors of aerial warfare which they have experienced, are undaunted and are now beginning to see the fringe of victory behind the dark clouds which have hovered over their country for so many long months," said Staff Sgt. J. R. (Bob) Rice, son of Mr. and Mrs. A. F. Rice, upon his return to Butte.

The widely known former Butte basketball player, who left with the draft contingent of June 17, 1941, has spent six and one-half months in England He was attached to an army air force ground school and was one of four men selected from his outfit to return to the United States for specialized training in air force ground duty. He will be assigned to foreign service again upon completion of his training.

"Although the British will tell you that "things are beginning to look up," they still realize that victory will be achieved only after a long, hard struggle," Sgt. Rice said. "Like all of us they know that the "job" ahead is a big one and one that will be successfully completed only after more and more sacrifices."

Dr. George Brigham Now at Hamilton Lab

Through the years since the Rocky mountain laboratory has held a spot of worldwide interest as a unit of the United States public health service there have been several men of science in the "come-and-go" chronicles of activity. Last in line is Dr. George D. Brigham, who hails from Connecticut. He came to take the post of associate bacteriologist in charge of typhus vaccine production.

The laboratory is officially known as the Rocky mountain laboratory national institute of health, division of infectious diseases, United States public health service. Dr. Brigham's coming to Hamilton is in transfer from the typhus research laboratory of the government at Savannah, Ga.

The lately come scientist received his bachelor and doctor degrees in science at the University of Connecticut in 1926 and 1929, respectively. He acquired his Ph.D at Yale university in 1933. After a few months as research assistant in the animal diseases department of the Storrs agricultural experiment station at Storrs agricultural experiment station at Storrs, Conn., he became director of the typhus laboratory of the state board of health at Montgomery, Ala., in 1934. The next year he became director of the United States public health service, first at Mobile, Ala., and then at Albany and Savannah in Georgia. His specialties in the field of science are listed as streptococci in mastitis, pasteurella classification, Rocky mountain spotted fever and typhus fever. He is the author of numerous papers in these fields.

For 75 years our country was without the nickel, but today it is the most used and most defaced unit in our monetary system. The abuse of the nickel probably is accounted for by the fact that it is the only coin on which "In God We Trust" does not appear. Treated more carelessly than even the penny, it is guessed that over 200 million nickels are today temporarily lost in old clothes, trunks and dressers.

We read, but without caring much about it, that the girdle manufacturers have ceased to live off the fat of the land.

From tee to green the average cost of keeping a golf hole in good shape is $1,000 a year.
