

Old Wyoming Field Drilled Deeper Has 320-bbl. Well

CASPER—Deeper drilling in an old field again paid dividends this week when Wyalta Oil Company's No. 1-D Government, SE SE SW 32-30N-81W, in the Spindletop field in Natrona county, 35 miles southwest of here, swabbed 640 barrels of heavy black oil from the Tensleep, topped at 2,224. Total depth of the well was 2,445 feet. The 5½-inch was set at 2,385 feet and perforated with 28 holes at 2,250 feet. The operators estimated it would make 600 barrels daily on the pump.

The Spindletop field was discovered in 1922, when it had some production from the Sundance sand at about 1,000 feet. The Sundance was topped in the Wyalta well at 1,260. In 1938, George W. Jarvis, head of the Wyalta company, completed three wells in the Sundance as small producers at about 1,050 feet, in section 32-30N-81W.

Locations for three additional wildcats were made during the week and several good producers completed in proven fields. The full state report:

Airport Dome

(Natrona County)
Dyer & Hays-Midert No. 1
SW SW SW 26-35N-80W
