TO THE STATE FAIR MEETING TONIGHT

The success of the state fair depends to a very large extent upon the interest in it of Albuquerque people.

TIME FOR ACTION.

A MEETING of the city council will be held tonight. A number of important matters will demand attention from the aldermen.

When a general idea is conveyed in the industrial industries, there follows a general rise in the prices of the necessary commodities.

Our regulations as to parking cars are ridiculously ineffective. They are thought so little of by automobile drivers that attempts have been made to run over the traffic officer at Second and Central.

Some automobile drivers seem wholly oblivious of the fact that they are street car lines in this city and that cars run on the lines at frequent intervals.

From the returns of the Democratic primaries in Quay and Blount counties Saturday it is clear that

there are quite a number of new Democrats in this state, enough in fact to make the much talked of "normal Republican majority" in New Mexico a matter of interesting historical value.

The Santa Fe New Mexican recently invited Albuquerque people to come up to Santa Fe and see the Santa Fe should move with care.

LEGITIMATE GAINS OF LABOR.

THE American Leader, published by the American Association of Foreign Newspapers in the interests of the foreign-born population of the United States, has a few words to say in its May 25th issue.

The American Leader has always stood for industrial peace. But this is the strike time of the year.

But the benefits derived from strikes are often illusory and deceptive. They are illusory in that the increased wages are usually accompanied by increased prices of necessities.

When a general rise in wages is secured in the industrial industries, there follows a general rise in the prices of the necessary commodities.

You can't get out of production more than you put into it. Wages can't be increased without reducing the price of the commodities accordingly.

Some New Mexico Republican bosses and legislative managers probably are beginning to wonder where some fourth circuit has reputation as a timber.

PHOTOGRAPHS OF TERRAIN TAKEN BY THE AIRMEN

Camera Proves Able to Show Country in which Troops Must Maneuver Better than Maps Made by Hand.

[Associated Press Correspondent] Headquarters, Paris, June 17.—(By The Front, France.) General Antoine, commander of the Tenth army corps, was bending over a military map at his headquarters when M. Pablice, a member of the French cabinet, was announced.

It was the first day of this trip of inspection, made under most favorable auspices, designed to show the cabinet officer the exact condition of affairs on the fighting line—the offensive and defensive organization, the morale of the men, the condition of supplies and equipment, the trench warfare and the actual fighting on the front.

The commander of the Fifth army corps and the other officers exchanged cordial greetings. General Antoine is a man of commanding presence, tall and athletic, a little beyond middle age, with iron-gray hair and mustache.

M. Pablice was much interested in the large facts showing in detail the layout of the fighting line, the positions and general attitude of the troops, and the general appearance of the terrain.

A score of officers were at work here, setting photographs, developing them and fitting them together into large panoramic views showing every foot and trench and road. The photographs were taken from the clouds, an aviator, and then the aviator came in with the negatives and when of them section. The whole was done in a few minutes.

These last, such pictures presented a gruesome scene of the havoc and desolation where the batteries were doing the worst work—the ground swept of trees and foliage, littered with debris and a few twisted trunks extending their distorted arms.

Wagner Announces He Is a Candidate for State Office

Advertisement for a product with the headline 'They do what you've always wished one would do—' and a large graphic that says 'They SATISFY!' Below the graphic is the text 'Get the Answer Tomorrow'.

Many from the banners of Tenth and Morisy, Semtous as black as coal and yellowed with smoke, most of these French soldiers in the line.

General Antoine and Minister Pablice now turned off to the firing line. The big barracks stretched in a long line along the front of the camp.

It was a striking scene, these police garden right, not in regular apparatus, but in the hands of half a mile along a dusty battle route.

When a high power rifle is fired, several things happen. The primer explodes, due to the heat of the firing pin.

There was the same orderly arrangement in the line of the other divisions, and also the same orderly arrangement in the line of the other divisions.

Static Electricity Causes Explosions in Threshing Machinery, Is Discovered

[By Evening Herald Special Wire] San Francisco, June 17.—Static electricity has been found to cause most of the explosions in threshing machines, according to a report received here from the department of agriculture at Washington.
