### The Crossing of Breeds.

The United States Bureau of Animal Industry imparts the following interesting information: "Moderately good animals crossed with an improved strain of stock should dress at least 60 per cent. Figuring a loss of 5 per cent on the slaughter test, with the number of beef cattle in the State of Tennessee the enormous total of 29,078,870 pounds of beef in slaughtering is indicated, representing a money value to the farmer of \$603,166.10. The influence of blood, breeding, conformation, etc., are well illustrated by the fact that certain steers fed in an experiment at the station gained only 45 to 48 pounds in 60 days, while others under practically the same conditions gained from 125 to 150 pounds in the same length of time. Illustrations of a similar nature might be drawn from experience in feeding hogs and in producing a pound of milk or butter from dairy cows of several types. All writers who have given this matter any thoughtful consideration point out facts similar to these, demonstrating the great losses incurred through ignorance of the fundamental principles of conformation."

### Hard Luck Story.

L. Madigan, a miner from Tonopah, thinks he is entitled to tell a hard luck story with the next man. He was thrown off a stage coach recently and severely injured, so that he had to be brought to the Holy Cross Hospital in Salt Lake, where he has been every since. That was enough trouble, but two or three days ago a friend, who was bringing his pocket book containing \$130 with which he expected to pay his expenses, lost the wallet. Now he is hoping for luck to turn and the pocket book to be found by somebody with honesty.—Salt Lake Tribune.
