\$2500.00 Prize Contest

We want every poultry raiser in this community to get into this contest. Don't miss your opportunity to win one of the 300 valuable prizes (1st prize \$500 worth of "Reliable" Poultry Equipment).

Prizes are given for the best answers to two questions asked about Purina Poultry Chows:

- (1) Why can we guarantee double chick development from Purina Chows when fed as directed?
- (2) Why can we guarantee more eggs from Purina Poultry Chows when fed as directed?

See Us For Full Particulars

Try your hand. Get in the contest—aim high—and win. We will give you full information. Don't miss out on this. See us today.

SCHLATTER, HOWARDS & HOY

THE SCHOOL KIDS ALL AGREE

The Health Bulletin of Toronto, Canada has this to say regarding school examinations: A DEVELOPED INTELLECT vs A CRAMMED BRAIN

"We have again arrived at the time of year for the annual examinations in many of the schools. It is true they are a test of the nervous energy and the nervous resistance of the child, but not necessarily a test of the knowledge possessed by the individual child. Much evidence could be cited to demonstrate this fact, for there are innumerable instances where two members of the same family, one much better equipped mentally than the other, but of a highly nervous temperament, falls in his examinations, or at best, merely makes a pass; while his brother, of a more fit and nervous temperament, does not care if he gets through or not, and with half the knowledge, frequently passes well.

"In addition to this injustice, there is the lamentable danger to the nervous system, especially of those of a nervous temperament. The late Dr. Wier Mitchell, one of the highest recognized authorities on this continent on diseases of the nervous system, in an address delivered to the teachers of Philadelphia, more than fifteen years ago, drew special attention to the dangers of examinations, claiming that he had made a careful study years ago in regard to Chorea (St. Vitus' dance), and always noticed an abrupt upward curve or increase at the period of examinations and also other nervous symptoms that were most prominent at these periods; for instance, the children would cry easily, were irritable, restless at night, starting up in their sleep, oft-times dreaming of their examinations.

Fortunately, however, these so-called "test examinations" have in a large measure been abolished. However, they are still in evidence to a regrettable extent. In fact, all authorities on the nervous system are agreed as to the ill effects, especially on children of nervous temperament, of the intense nervous strain which these annual examinations place them under, coming as they usually do at the end of the session when the children are all fairly well exhausted, and when the nervous system of many of them has already been taxed to the extreme. Furthermore, these annual or semi-annual examinations, whether it be as

a basis for the issuing of certificates or diplomas, or the granting of degrees, only have a tendency to foster the abominable system of cramming up for examinations at the end of the term. We must bear in mind that there is a vast difference between a crammed brain and a developed intellect and a disciplined mind. Every week, every month, every day must do its work, line upon line and precept upon precept.

Professor Barker of Johns Hopkins, when referring to this, in an address on mental hygiene, drew attention to the fact that nervous children should not even be sent to school until a year or several years later than the normal child, and that on no account should they ever be pushed ahead too fast. Competition, says Professor Barker, is dangerous to the nervous child. The ambitious parents who desire their children to head the class, are often responsible for serious injuries to health. One only requires to look back over one's own experience and those of their friends to recall many instances in which boys and girls, young men and young women, have paid for scholarships and gold medals with a slice of their constitution which they have never been able to pay back.

"As the late Dr. Daniel Clark expressed it: You cannot run a 20-horsepower engine at a 40-horsepower pressure without paying the penalty."

It is a well-recognized fact that competitive examinations and competitive sports do not make for the best mental and physical development. —Division of Health.

To My Wauseon Friends:

Owing to my health I have decided it is advisable to drop out of the news business.

I have therefore disposed of my Marriott and agencies to Mr. F. W. Marriott, a man of experience and who is well recommended. He takes possession on Sunday, April 9th.

Mr. Barber will remain with him several weeks to close out my interests. All newspaper accounts up to April 9th are payable to me. All after that date to Mr. Marriott. All subscriptions paid in advance of April 9th will be given the proper credit on Marriott's books.

I desire to most heartily thank the people of Wauseon and surrounding county for their patronage for the past twenty-five years. And bespeak for Mr. Marriott a continuance of the same.

Very respectfully,
Harry S. Gingrich

FARM WAGES

Decline From \$8.00 to \$10.00 During the Last Year Farm Labor Conditions are Approaching a Normal Condition

The average farm wage on April 1 for the State of Ohio was \$12 a month, which is a reduction of from \$8.00 to \$10.60 a month from the wages paid a year ago, according to C. J. West, Agricultural Statistician for the State Federal Crop Reporting Service. The supply of labor in most sections of the State is amply sufficient for all needs so that normal labor conditions on Ohio farms are not far away.

If one thinks of the unemployed in the cities as available there would appear to be a large surplus of farm labor but many of the unemployed are not sufficiently skilled to be of much use on a farm.

The 20,000 and more tractors together with a general farm equipment of more intricate machinery gives rise to a farm demand for more labor which is trustworthy and skilled in the use of machinery. But this machinery has greatly increased the acreage which one man can cultivate so that fewer farm hands are needed than was required ten years ago. The farms which are not mechanically equipped require a type of farm labor which was common some years ago before the movement from the farms to the cities set in and this type was that of the man who could plow a straight furrow, haul or cut corn and do other jobs which the laboring man of today cannot do. The result is that only those men who have either some mechanical experience or who have the old style of skill in farm work are of great use on a farm and hence the great body of the unemployed in the cities are not desired by farmers as hired men.

SEES 'POTATO PROFIT' IN FERTILIZER SACK

Crop Scientist Tells Why "Worn-Out" Maine Land Double Yields

Why do the "worn-out" acres of Maine average potato yields of 199 bushels to the acre, while from the comparatively virgin acres of Ohio the average yield is only 79 bushels? This is a question raised by Earl Jones, crop specialist of the Ohio State University, in a four-page pamphlet just issued. He calls the publication, "The Intensive Use of Fertilizer" and this, he believes, sums up the answer to the question.

Maine is farther north, and the climate is somewhat better suited to potatoes; growers there have made the crop their specialty, and they use somewhat more advanced methods of seed selection, culture, and spraying; but the main difference is that Maine potato farmers, particularly in Arostook County, apply around a ton of complete, high-analysis fertilizer to the acre, says Mr. Jones, who was crop specialist in Massachusetts before coming to Ohio.

The potato plant, he says, has a hearty appetite and lazy roots. Plant food must be put right to the spot,

and in forms readily available. He cites recent New Jersey experiments to show that, in large measure, "potato profit is in the fertilizer sack."

Rather than the 4-8-7 fertilizer standard in Arostook, the banner potato county of Maine and of the nation Mr. Jones inclines toward a 3-10-4 or a 2-12-2 mixture for Ohio conditions. He does not hold that Ohio farmers ought to use a ton of fertilizer to the acre, but he does remark that, "as the culture of the crop becomes more highly specialized, it will probably be found that 300 or 1000 pounds of high analysis fertilizer to the acre will prove profitable."

PLUGGER BEATS THE PLUNGER EVERY TIME

Special Farm Products Prices Rise Only to Fall Again, Says Economist

There has been money in chickens and hogs, and in nothing much else, during the past winter, say economists of the Ohio State University. The accounts of \$28 poultry demand, a strata farms just compiled by poultry extension specialists are quoted to show that the average of these farms

Vitamin Easy to Find But Hard to Find Out

When the eminent Austrian scientist, Casimir Funk, tracked that mysterious life-giving substance to its lair and then named it vitamin, he started something that bids fair to assume importance in rank with the telephone, the steam engine and the Ford.

Little did the professor think that he was upsetting the calm and orderly lives of our most dignified scientists and medical experts, causing them to plunge madly into orgies of research, and vie excitedly with each other over each new discovery in this intriguing field.

In spite of the fact that nobody has ever seen a vitamin face to face, its marvelous performance goes on apace. Nobody ever saw electricity, but no one who ever picked up a live wire doubted its presence. So it is with vitamin.

Anyone who has seen dying pigons, rats and pige revivd simply by feeding them tiny fragments of yeast, cannot doubt the presence of a magic "something." Anyone who has visited hospitals, where tests on sick people and well people are under way, must be forcibly struck by the almost uncanny recuperative and tonic effect of yeast vitamin.

So yeast, which for all these years has led such a prosaic career, has come into its own and from all indications seems headed for an illustrious future.

True, yeast was used many years ago as a "home remedy" for boils, but although it did the work, not much significance was attached to its curative powers. It was not recognized by the medical profession and had no standing in professional therapeutic circles. But look at it now!

Newspapers, magazines, medical journals and scientific publications all over the world proclaim in no uncertain terms its present high estate. How—how, indeed, the lowly have risen!

Yeast, especially the pure whole dried type of yeast, said to be the richest source of vitamin, is successfully used in the treatment of boils, pimples, blackheads, indigestion, failing appetite, anemia, malnutrition, nervousness, physical debility, colitis, and other symptoms of what we vaguely call a "run down" condition.

Recent articles seem to show that vitamin even makes the hair grow in a way that would make Lady Godiva herself envious. What will be the next revelation? Are we to find that in this microscopic plant lies the fabled fountain of youth?

The future will tell and in the meantime, while celebrated medical men are experimenting, business men are not entirely idle. The patent medicine "experts" are busy and everywhere the public is urged to buy so-called vitamin tablets, some of which are no doubt worthless.

At a time like this a word of caution may be in order, and if it is, take this for what it is worth; get yeast from yeast makers and not from medicine makers or miscellaneous unknowns—and get yeast of authentic purity and tested potency.

OUR BATTERY SERVICE IS FREE

How it Pays Us—and You

Of course we're in business to make money. You have probably wondered why we maintain the expense of free inspections for batteries. We have two reasons:

1. It enables us to get acquainted with automobile owners.
 2. It gives us a chance to demonstrate our exceptional ability to care for and repair batteries.
- In a word, this free inspection is the best advertising we can possibly do.

It pays you to avail yourself of this service, because it will help you get longer life from your battery; and prevent battery troubles on the road.

PREST-O-PLATES Mean Plenty of "Pep"

They are the backbone of Prest-O-Lite Batteries. Better than ordinary plates, they make Prest-O-Lite Batteries better than ordinary batteries.

Prest-O-Plates combine a peculiar porosity with an unusual hardness, which explains their quick delivery of power in cold weather, and great heat-resisting, non-buckling strength in summer.

We have Prest-O-Lite Batteries as low as \$19.90 (trade in price) for popular makes of light cars, and other types at correspondingly low prices. These are not special models, but regular Prest-O-Lite Batteries, backed by the regular Prest-O-Lite warranty; a definite, generous obligation, plus a split that says the car owner must be pleased. Prest-O-Lite Batteries are specified by 87 leading manufacturers, and this list is growing.

How is your battery working? Is its pulse low? Come around and consult our specialists. We prolong the life of all batteries, and we never tell you that you need a new battery until you do. Drive around, and get our friendly expert advice.

THE SPINAL COLUMN IS THE KEY TO THE SITUATION

IN A MAJORITY OF DISEASES, THE CHIROPRACTOR devotes little time to symptoms or effects, but turns at once to the cause, where he knows by experience the trouble will be found.

THE SANE HEALTH SOUND DISEASE and common sense methods without drugs or instruments are used to restore the spine to its normal condition, thus removing pressure on the nerves, enabling them to cause their all important functions, and restore the body to a condition of good health.

WHEAT

The condition of wheat in Ohio is generally good and is estimated at 87 per cent by the State-Federal Crop Reporting Service. Last year's estimate was practically the same as this year and was followed by a decided improvement and then a marked decline. The erratic changes of last year in the condition of wheat only show the uncertainties that pertain to an estimate of the wheat crop early in the season.

The effects of the severe weather during January and February of last winter should soon become apparent. Many fields are spotted by freezing out of the plants. It is estimated from present indications that 10 percent of the plants have been winter-killed. The fall damage from fly is estimated at not more than 3 percent. Wheat condition through the United States averages 89 percent which compares with 91 percent a year ago.

Don't think you are important because you are around you tell you so. The world is full of "kiddiers."

FACTS ABOUT OPTOMETRY

We have already discussed near-sight briefly, but before leaving the subject we desire to remind parents that where they have reason to suspect near-sight in their children they should have their eyes examined for POSSIBLE defects. It may be that a child is not near-sighted, but may possess some other error of vision.

An examination by an Optometrist would clear up all doubt in the matter, and if glasses are found to be necessary for ANY defect of vision they could be furnished. Otherwise the subject can be dismissed by the parents, and their satisfaction would come from having all anxiety removed regarding the sight of their children.

THE IMPROVED ASPIRIN TABLET

Jingle's Laxo Aspirin
Aspirin is prescribed by physicians more often than any other drug. We desire to remind parents that where they have reason to suspect near-sight in their children they should have their eyes examined for POSSIBLE defects. It may be that a child is not near-sighted, but may possess some other error of vision.

An examination by an Optometrist would clear up all doubt in the matter, and if glasses are found to be necessary for ANY defect of vision they could be furnished. Otherwise the subject can be dismissed by the parents, and their satisfaction would come from having all anxiety removed regarding the sight of their children.

Jingle's Laxo Aspirin
It is gently laxative, cleansing the system of poisons which are often the cause of pain. Does not cause heartburn or indigestion. It is headache and neuralgia. Breaks up a cold—removes the mucus. Relieves rheumatism, neuritis and lumbago. Brings almost instant relief in headache and neuralgia. Ask your druggist for JINGLE'S LAXO-ASPIRIN in the three-point box, or mailed postpaid for 25c. Therapeutic Research Laboratories, Washington, D. C.
