

Star Disc Harrow

The bearings are fastened and are provided with wood bushing. As a result all wear is concentrated upon these wood parts which cost but a trifle and are easily renewed, though it is seldom necessary to do so.

Owing to the facilities for oiling the bearings they won't run dry. You take out the oil plugs which are in the bottom of the weight boxes, the most accessible place to put grease, and fill the oil ducts—they hold a lot of oil, too—then forget about them. The feed is just right and the harrow will run easily without more attention for a long time. These oil ducts are simply holes cast in the standards, the lower ends of which form the top sections of the bearings. It is a simple and effective arrangement.

Don't overlook the scrapers—they are one of the fine points on this harrow. A harrow defective in this respect, though perfect in every other, is often useless. Remember this and examine those on the Canton Star. They are made to sweep across the faces of the discs from center to the outer edges, and each blade has a pressure spring to hold it firmly against the disc and yet leave it flexible.

If you prefer, the Canton Star Harrow can be equipped with a Sander Attachment for Broadcasting or Drilling. It's just as good as the harrow itself.

Its wear-resistance is absolute.

There is talk of calling a mass meeting of the citizens of the last end for the purpose of organizing a business men's league, or substitute the Chamber of Commerce leadership of Freeman L. Mar-

We petition against these plans, against public discrimination, and its attendant injury to colored Americans, the establishment of caste for this free republic. We petition you to reverse, prevent, and forbid any such movement by your bureau chiefs, in accord with your promise of fair, friendly, just and Christian treatment of your fellow citizens.
