From the Franklin Farmer.

Mr. Editor,—I am induced to communicate to you the following paragraphs in your paper yesterday, by the request of a number of our neighbors, who, since I first wrote the words of which the Franklin Farmer is a copy, have expressed a desire that their sentiments should be recorded. The following is a part of their letter.

"For some time past we have been much occupied in the cultivation of the land, and have found it to be a laborious and troublesome task. We have seen many people who have attempted the same work, and have failed in it; but we have also seen others who have succeeded, and have reaped a bountiful harvest. We have been led to believe that the cultivation of the land is the most profitable way of life, and we are therefore anxious to be informed of the best methods of cultivating the land, and of the most effective means of preventing the loss of the land's fertility.

From the Franklin Farmer.

The Black Horse.

It is a fact that horses are very proper for the cultivation of land. They are very useful as a means of communication, and in the cultivation of land, they are an indispensable necessity. They can plough, they can carry, they can afford a great deal of labor, and they can do work which is impossible for man to perform. They are, therefore, the most proper and efficient means of cultivating the land, and we are therefore anxious to be informed of the best methods of cultivating the land, and of the most effective means of preventing the loss of the land's fertility.
