When Glasses Give Better and More Comfortable Vision

When our examination shows positively that eyeglasses will give better and more comfortable vision, the exact scientific prescription is prepared and the glasses that we furnish are the best, most becoming and most satisfactory that the highest optical skill and science can provide.

Our glasses are fitted and adjusted in frames or mountings especially adapted to each individual case. Our large variety of special mountings enables us to select what is most suitable as well as serviceable. With our special system of measurements we adjust the lenses and mountings so that they will be optically centered with scientific precision, which is as important as the prescription itself.

We give special consideration to the appearance of glasses and mountings, when worn, in order that they may be most becoming. Our patients are always gratified with the results that we obtain in this respect.
