

THE POST.

AT TWO DOLLARS PER YEAR.

Advertisements will be charged one square for the first week, and the second week at half price, and the third and fourth weeks at a further discount. For the year, \$15.00. For three months, \$5.00. For one month, \$1.50. All advertisements must be paid for in advance.

ATHENS, FRIDAY, OCT. 15, 1855.

NEW ORLEANS, Oct. 6.—The steam ship Black Warrior, with Havana cargo of the 2d, has arrived. The Naval magazine on the 24th, filled with powder, shell and rockets, exploded on the 25th. Twenty-eight persons were killed, and 102 wounded. More are supposed to be under the ruins. Nine-tenth sugar houses were destroyed. Many buildings were damaged. The whole city was shocked, and the Gas Works rendered useless. The police and troops are guarding Conchs. The officials are on the ground, aiding the unfortunate. The cause of the explosion is unknown. The city is in distress.

Some authors contend that poverty has its advantages as well as wealth. He says: "It is the nurse of manly energy and heaven-climbing thought, attended by Love, and Faith, and Hope, around whose steps the manly soul hovers, and from whose countenance all the virtues gather strength. Look around upon the useful and distinguished men in every department of life, who guide and control the times, and enquire what was their origin and what their early fortunes. Were they, as a general rule, rocked and dandled in the lap of luxury and wealth?"

A NOVEL STEAMSHIP.—Some months ago it was announced that the Messrs. Widens, of Baltimore, were constructing a steamship on a novel principle which was expected to be able to cross the ocean in a six days voyage. The constructors seem to have thoroughly considered the subject, and have produced a novelty in ship-building. The vessel is to be about 170 feet long, and tapering down to the slender edge at each end, a large propelling wheel, with diagonal paddles, runs in the centre at right angles, and is driven by powerful engines. Instead of riding upon the waves, it is intended to penetrate them. The vessel is now finished, and is shortly to be launched at Baltimore.

Mr. Yeehan, of So. Carolina, knows horses "some," and women a good deal, that's certain. Hear him talk: "Sir, I am a filibuster, either politically or martially; but after seeing the Virgins of womanly grace and equestrian skill, were I a single man and young man, I should have a shrewdness to go a filibustering in old Massachusetts, with Capt. prompting the Adventure and Hyman to crown it with success and consecrate it with happiness. Permit me, too, to add that from the glimpses I have had of Massachusetts horses and Massachusetts women, although you may need and favor of wild horses, you may have need for the tamer of the Arabians."

LADY KILLED BY A CARBON BALL.—As the officers of the U. S. Arsenal at Frankfort, Pa., were testing, a few days since, a mortar loaded with an ounce of powder and a twenty-four pound ball, Mr. Pipot, the wife of the Superintendent of the Arsenal, passed within range at a distance of about one hundred yards just as the piece was discharged, and was killed.

A MORAL BANKRUPTCY.—The New York correspondent of the Boston Journal writes: "It seems as if official corruption and fraud were holding a jubilee in this city. The open and shameless manner that the public treasury is robbed excites all former observers. Millions of dollars are thus squandered and stolen, and no one brought to account. Those who preside over the collection of taxes have made the discovery that immense sums have been fraudulently detained by the collector of taxes, and appropriated to his own use. What is true in a single department is also true of corporations. One of the insurance companies of this city, that has stood high in the land yesterday, its capital was \$500,000, all paid in proficiency. It was represented as one of the most and most reliable in the city. A firm of some one month ago wanted to make an investment. A gentleman who held \$20,000 of this stock advised it as safe stock. Yesterday a meeting was called of the stockholders. The concern was insolvent. The Corporation of the State was present, and out of all the assets, good and bad, only \$70,000 could be found. To the stockholder the loss is complete. Such events are of daily occurrence. It is difficult to tell what is safe and when to trust. Commercial integrity and business honor seem to be a thing of the past. It cannot be denied that the late commercial crisis has seemed to sweep away much of the old fortitude. The bonds between right and wrong have been broken down. And men who would have seemed to repulse a debt, or appropriate what is not their own, seem now regardless of public sentiment or private honor."

MR. CLERMONT'S CONDUCT.—The Charleston (Va.) Advocate of Friday evening regards to learn from Richmond, that but little hope is entertained for the recovery of Mr. Clermont, wounded in the late duel with O. Jennings Wise. It is said that mortification has taken place.

The loss and destruction of property by the recent civil war in Mexico has been estimated at \$100,000,000.

RINGS AROUND THE EARTH.

It is thought that the rings have recently begun to encircle the globe in a regular and systematic manner. On the 14th of last month, Prof. Neill, 11, 13, observed the spot of a ring of beetles on the Atlantic. At the present time, the subject has been the subject of much discussion, and has attracted the attention of many astronomers. In the introductory lecture the Professor made an observation respecting the rings of light, and said: "What had been called the 'ring of light' was only visible here in the form of a cone, but an American astronomer, who had gone to Japan and other accessible points, to investigate the subject, found that the cone opened up and extended across the heavens from horizon to horizon, and that he had observations during the night, traced about three-fourths of the circle. This discovery found that we had been looking at the rings as we might do a hoop laid edge-wise, thus making it assume a conical form. The learned Professor proceeded to say that the theory previously held that the ring of light proceeded from a nebulous ring around the sun, was thought to be premature, and that the appearance came from a great nebulous ring surrounding the earth. He explained, by means of a diagram, that we should see the ring from this ring reflected more strongly from our horizon than at its points higher up in the heavens. No ring around the sun could explain this appearance; one around the earth could, entirely. They were favored also to the conclusion that it was not one ring, but a number of rings, several in distance, was about 100,000 miles, its breadth 25,000. Its depth was not known, the mass of matter in it must be enormous, and no doubt was fulfilling some important functions in regard to the earth and the solar system. The composition at Saturn's rings was then discussed, and an account given of the changes which had been noticed in them by various observers.

From the dynamical consideration of Laplace, combined with the changes ascertained, the lecturer drew the inference that the rings have no coherence, that they are neither vapor nor fluid, and give us a theory of their constitution that they are composed of millions of asteroids circulating around the planet; the bright parts being where they are most thickly strewn, and the dark lines, the absence of them. There was a faint steady colored ring within the other, and this appeared to be gradually approaching the planet. It had approached at the rate of 60 miles a year, and at about 80 miles a year, it would reach the planet itself in 180 years.

THE MURDER OF PARTIS.

There is a general opinion that the murder of Partis is a case of the same nature as that of the murder of the late President. It is thought that the same motives are at work in both cases, and that the same methods are being employed to cover up the truth. The authorities are doing all in their power to bring the perpetrators to justice, but the case is by no means clear. There is a great deal of speculation as to who the guilty parties may be, and it is hoped that the investigation will soon be complete.

THE COMET.

There is a great deal of interest in the discovery of a comet, and many are hoping to see it. It is thought that the comet will be visible in the evening, and that it will be a very bright one. There is a great deal of speculation as to what the comet may be, and it is hoped that the authorities will be able to give us some information as to its nature.

THE RUMBLE OF THE GREAT EAST.

There is a great deal of speculation as to the cause of the rumble of the great east, and many are hoping to see it. It is thought that the rumble is the result of some great change in the earth, and that it may be a sign of some great disaster. There is a great deal of speculation as to what the rumble may be, and it is hoped that the authorities will be able to give us some information as to its nature.
