A MAN SLAYER RUN DOWN.

One Man Kills Another and is Himself Lilled by a Train.

By Associated Press to The News:

PANAMA, April 5.—During the battle at Culebra today a baker named Anderson and a man named Yeatman quarrelled over a woman partner. Yeatman seized Anderson by the throat and Anderson plunged a knife into Yeatman's heart killing him instantly. With great difficulty Anderson freed himself from the corpse and escaped down the railroad track. He was run over and killed by an express train.

ARSENIC AND AMMONIA.

Remarkable Contrast in the Effect of Two Poisons on the Complexion.

The slow absorption of many poisons changes in some more or less modified form the complexion, but arsenic and ammonia show their effect about as quickly as any. The popular belief that arsenic clears the complexion has led many silly women to kill themselves with it in small, continued doses.

It produces a waxy, ivory-like appearance of the skin during a certain stage of the poisoning, but its terrible after effects have become so well known to make it of common use as a cosmetic.

The effects of ammonia upon the complexion are directly the opposite to that of arsenic. The first symptom of ammonia poisoning which appears among those who work in ammonia factories is a discoloration of the skin of the nose and forehead. This gradually extends over the face until the complexion has a stained, blotched, and unsightly appearance. With people who take ammonia into their systems in smaller doses, as with their water or food, these striking symptoms do not appear so soon. The only effect of the poison that is visible for a time is a general unwholesomeness and sallowness of the complexion.

Many people are slowly absorbing ammonia poison without knowing it. The use of ammonia in the manufactures has greatly increased of late, and it is unquestionably used as an adulterant in certain food preparations. Official analysis have plainly shown its use even in such cheap articles of every day consumption as baking powders. The continued absorption of ammonia in even minute quantities as an adulterant in food is injurious not merely from its effect upon the complexion, but because it destroys the coating of the stomach and causes dyspepsia and kindred evils.

Professor Long of Chicago, is authority for the statement that, if to fifty million parts of water there is one part of ammonia, the water is dangerous.
