This is the Spinal Column split in two, showing well nerves and nerves that have been shrivelled by drugs and anti-toxins, and stimulants until they leave stagnant blood in the part they go to and cause the different diseases of whatever organ they go to. Any of these shrivelled nerves if the sore part is healed up by drugs or cut off, will still leave the stagnant blood in the body which will go to lungs and overtax them and cause consumption.

"Because I had had her in the leading medical hospitals and I saw them dragging out the dead through the window and back doors and every other way to keep the patients from knowing it. And they had doped my wife with their poisons and carved her until they had exhausted all her vitality and then told me there was no hope. What good had it all been? She was ten times worse than when they began on her and the only hope was the grave. I brought her home on a stretcher, and she got up and ate food on her stomach. Now she's regular and walks to the Dr. Still Osteopathic infirmary for her treatments. And while Dr. Ira W. Collins has twice as many patients as any of the hospitals she was in, I don't see the dead wagons back up to his patients every hour in the day, but they are all smiling and getting better. So that no one except a ignorant fool or prejudiced avaricious doctors who would rather see my wife die than go with the throng to the Osteopathic Infirmary and get well, would ever ask such a foolish question as to why I took her here. They say there is a summer every day for you fellows to poison and carve on and lay out in the grave yard. But they don't seem to live in El Paso from the way the best people stand up for Dr. Collins and his Osteopathic and pour over there to get well. I'd think it was time most any dead was waking up and realizing it was these poisons and carvings that was killing his family, and causing them to be diseased when he'd see the way the dead wagons haul them off when under drugs and surgeons."

Eighty thousand cases of every kind of diseases handled at the Dr. Still Osteopathic Infirmary with a loss of only eight, three thousand cases of cancerous cases handled without a single operation. Some of the worst cases of abscesses and tumors. All we did was free the nerve and it held up the parts and forced circulation and drained and healed up the diseased parts, and they were as well as they ever were before the drugs had exhausted the nerves to the parts. TRY IT BEFORE TOO LATE IF YOU PREFER TO BE WELL TO THE DEAD WAGON.

Why Did You Bring Your Wife Here and Put Her Under that Fraud Osteopath, Dr. Ira W. Collins? Asked a medical doctor of an eminent business man

FRANK G. CARPENTER’S LETTER.

UNCLE SAM’S TOMATO CLUBS

HOW 3000 SOUTHERN GIRLS ARE COMPETING WITH THE BOY CORN RAISERS.

They Have Garden Patches of One-Tenth of an Acre and Work Under Agricultural Department—How the Farms Are Managed—Gaming Clubs and Prizes—Tests for Prices—Marketing the Product.

WASHINGTON, D. C. June 11th, 1886.

Mr. W. W. Alexander.

I was pleased to hear from you and to find that you have established a tomato club for the benefit of the young men of the county. I am in entire accord with your plan of bringing about the cultivation of the potato. It is a difficult task to do this, but the advantage of teaching people to cultivate potatoes, and to make them use them for the benefit of the community, is well worth the trouble. I have always been of the opinion that potatoes should be cultivated in every county, and that they should be grown by the people of the county. In this way, the potatoes are not only grown for the benefit of the community, but they are also grown for the benefit of the people who live in the county. I am glad to hear that you have established a tomato club, and that you are doing all that you can to bring about the cultivation of tomatoes. I hope that you will have success in your work, and that you will be able to grow potatoes in every county in the country.
