PATAGONIA HAS BOOM IN MINING

Whole District Is Filling Up With Prospectors and Mines Are Active.

The Patagonia mining district, Arizona, is becoming very lively, according to J. Fritz Nidermaier, a mining engineer who has arrived in El Paso from that district on his way to Cananea...

The report that Senator Clark has bought a mine there, as published in the papers, says Mr. Nidermaier, is erroneous. A Mr. Hoyt has the lease and bond on this property...

A mine and a half west of the W. P. mine, down the canyon and within three miles of Patagonia, is a little copper sulphide prospect...

The Humboldt mine, which is said to be bonded to the Copper Queen company, is another active prospect...

A copper property near the Duquesne mine, owned by Brown to the Phelps-Dodge company, for \$150,000...

The Gray mine owned by Harry & Douglas, near the Humboldt mine, is a rich copper mine with great promise...

The World's Fair mine, owned by Frank Powers, is a silver mine with rich veins of silver and gold...

Patagonia is going to be a great camp in the opinion of many, and many prospectors are rushing there...

Patagonia has once more begun working after several years idleness. Two double compartment shafts are being sunk...

A big bonanza is being worked in the Santa Rita mountains west of the town of Patagonia...

The Rupert mine, owned by Col. Richardson, has been taken over under bond and lease by Henry Wright...

Deep-seated coughs that resist ordinary remedies require both external and internal treatment...

El Paso's stores are now exhibiting complete stocks for the Christmas trade. Shop early and avoid the Christmas week rush.

INSPIRATION CONSOLIDATED IS PREPARING TO BUILD A MILL

Work on the Property Is on Big Scale and Large Force of Men Employed.

Globe, Ariz., Dec. 11.—An enormous amount of work is being prosecuted by the Inspiration Consolidated Copper company, covering an area miles in length from the sinking of the supply shaft west of Miami to the railroad excavation at the mouth of Warrior canyon.

Ground is already being broken for the mill site, a steam shovel is grading its own road through the steep canyons as it climbs to the point where it will work on the site. Laborers are strung along the mountain sides building a 16-foot wide wagon and automobile road, buildings are being constructed, and the whole vast area of the Inspiration's surface swarms with men at work.

One Drift Over Mile Long. The company's mining operations are also a matter of vast distances and immense energies. Not only do the many drifts and crosscuts reach a total distance of many miles, but one drift alone will be over nine miles in length when finished. The long haulage level that will connect the Live Oak portion of the property with the two main Inspiration hoisting plants will be 6000 feet long. In November 4000 feet of development work was accomplished and during the previous month 4500 feet of ground was cut.

The supply shaft, west of the town of Miami is already 270 feet deep. It is an inclined shaft of 30 degrees inclination through which all miners and supplies will enter. The shaft was raised from a depth of 285 feet from a tunnel through which the miners will reach the shaft. The latter was extended to the surface to avoid the expensive work of cutting a station at the 255 foot depth large enough to contain a hoisting engine.

Virtually no sinking is being done at Live Oak No. 1, but a station is being cut there and a shaft started toward Live Oak No. 2. The distance between these shafts is 2300 feet.

Drifting between the Joe and Scorpion shafts is progressing at a good rate and the contractors expect to finish the drift by the middle of January.

Tunnel Work Finished. Work on the Sulphide tunnel has been finished, the tunnel now being standardized, or enlarged to 7-1/2 feet in the clear. Many of the sharp curves in the tunnel have been minimized by the recent work, its present trend being as near normal as could be effected without driving a new tunnel, an expense considered unnecessary by the present management of the property. The "casing off" of the curves makes it possible to install electric haulage in the Sulphide tunnel. At the mouth of the tunnel a concrete
