

"FAIR" TODAY, SAYS THE WEATHER DOCTOR

Fall in Temperature Occurs Saturday, in Accordance With His Prediction.

Weather Wizard Thiessen predicted frost for Saturday night, but thinks Sunday will be fair. Utah will be cooler in the south and east portions, according to the forecaster.

The western high pressure area will dominate the weather in this vicinity for the next thirty-six hours, it is said.

In general, the barometric pressure is high east of the Mississippi river and in the extreme northwest. The low barometric area north of Montana

yesterday has moved slightly to the east, but with decreased energy; it has caused showers in the upper Mississippi valley and in the northern Rocky Mountain region, and somewhat higher temperatures in the Dakotas and Minnesota. The high in the north west has caused cooler weather, with frost at some stations. The temperatures are about normal east of the Rockies, and below normal in the Pacific ocean, except along the immediate California coast.

Klotz Laid at Rest.

George Klotz, who died on September 7, while he was being carried into St. Mark's hospital, after having been taken from the city jail to that place, was buried Saturday afternoon in the city cemetery. After days of waiting in answer to a telegram which had been sent to the relatives in Switzerland and which failed to bring an answer, the remains were buried. The services were of the most simple nature and were attended by his surviving widow, two daughters and a few friends who had known Klotz during the latter part of his life.

REPORT ON CONTAGIOUS DISEASES PREVALENT IN UTAH AT THIS TIME

The health report covering the month of August for the whole state of Utah was issued Saturday by the state board of health. It shows that out of a total population of 346,873 there were 290 deaths from all causes; 106 districts reported no deaths whatever during the month, out of 146 districts reporting; 73 districts were free from all contagious diseases. Concerning contagious diseases the report is as follows: Scarlat fever, cases 57, deaths 3; small pox, cases 101, no deaths; diphtheria and membranous croup, cases 37, deaths 2; typhoid fever, cases 108, deaths 2; whooping cough, cases 191, deaths 7; measles, cases 16, no deaths; chicken pox, cases 17, no deaths; pneumonia, cases 24 (report incomplete), deaths 13; tuberculosis, cases 19 (report not complete), deaths 3.

Smallpox—Contrary to the usual experience, smallpox has been widely prevalent throughout the summer months and there is reason to fear a serious epidemic of the disease during the approaching winter. As has been so often stated, Utah is relatively defenseless against this disease because of the peculiar and unusual prejudice existing against vaccination which is the only known method of preventing it. Health officers and all interested in the public welfare should do their utmost to correct the unjustified antagonism to a measure which safely and surely prevents this loathsome disease. All persons who have not been successfully vaccinated within seven years should promptly have it performed. School children especially should be vaccinated, because of their liability to contagion in the schoolroom. It is for the people of the state to elect whether they shall avail themselves of a measure which will thoroughly and permanently eradicate smallpox, as in other states, or continue to submit as for ten years past to the annual visitation of hundreds of cases.

Whooping cough—The report of deaths from whooping cough shows an alarming increase, the number being greater than those from scarlet fever and diphtheria combined. The efforts to restrict its spread will become effective only when the public shall become educated to recognize the fact that it is a serious and deadly disease and not the trivial affair which it is considered by the majority of people, as a consequence of which no precautions are taken to prevent its spread. Among infants no disease is more dangerous to life, and the after effects are very frequently serious and permanently injurious to those who survive. It is a criminal disregard of the law to permit cases of whooping cough to go at large or to associate with other persons, and such cases coming to the notice of health officers should be prosecuted. As the disease is not conveyed except by contact with the person affected, it is unnecessary to quarantine other members of the family.

Typhoid fever—It is gratifying to note the reduction in the number of reported deaths from typhoid fever compared with those of the same month in past years. It is reasonable to assume that at least a part of this reduction is due to the more general recognition of the agency of flies in the spread of the disease and the measures adopted to destroy them and exclude them from houses. Continued warfare should be waged against these dangerous pests and especial precautions taken to exclude them from sick rooms. Flies which have become contaminated with typhoid germs are particularly liable to convey them to milk, either at a dairy before it is distributed, thus endangering many consumers, or in the home when not properly protected. Cases of typhoid fever which occur on the premises of a dairy seriously menace the health and lives of all who use the milk therefrom, and not only should the discharges from such cases be thoroughly disinfected but the contents of the outhouses used as a receptacle for them should be kept covered with unslaked lime. Neglect of these precautions is responsible for much of the spread of the disease. The milk supply should be investigated in all cases of typhoid fever reported, and the investigation should include an inquiry into the cases of past existence of typhoid fever at any place in the neighborhood of the dairy.

News of St. Mary's

The second week of school has closed with very satisfactory results. The number of students is steadily increasing. The new girls are readily adapting themselves to the rules and regulations, and there is every promise of a pleasant and successful year.

The athletic spirit of former years seems to have been strengthened during the vacation; this fact being plainly shown in the prompt organization of basketball and tennis clubs. Judging from the reputations which are associated with some of the newcomers, valuable acquisitions will be added in their ranks to the teams. Rumors of approaching challenges already fill the air, and the girls are eagerly looking forward to exciting contests on the different fields.

Among the preparatory classes, nature study seems to be a favorite subject, and new specimens are adding daily to an interesting collection.

During the past week the roof of the academy building has been converted into an observatory by the astronomy class, and many pleasant as well as instructive hours have been spent there tracing the late summer and the fall constellations. The present favorable position of Mars justified the bringing forth of the telescope for a view of that splendid luminary; and thus, as with our greatest poet: "The first watch of the night was given To the red planet Mars."

The annual election of officers of the high school athletic association will be held during the early part of next week. It has been decided that a member of the faculty of the school, to be chosen by the principal, will be given the position of treasurer of the association. It is understood that Rowick S. MacNiece will be appointed, and he will handle all funds which belong to the association.

Through bad management a debt was contracted last year, and it will be the aim of the association to regain a firm financial basis before the present season is over.

Mrs. Weston Called. Mrs. W. J. Weston died at her home, 167 Center street, Saturday afternoon. The remains will be shipped to South Dakota for burial. Mrs. Weston was prominent in the James B. McKean post, Women's Relief corps, and that organization held a memorial service at the Hall's undertaking chapel Saturday afternoon, which was well attended by a number of the friends of the deceased.

Volunteers of America. Dr. R. G. McNiece, dean of the Westminster college, will speak at the meeting of the Volunteers of America, 19 Commercial street, tonight. There will be special music.

UTAH'S GREATEST STATE FAIR

In fact the greatest State Fair ever held in the west. Improvements in buildings and grounds amounting to nearly \$25,000 have been made for this event. A new poultry house—the finest in the west, has been built; new stables and sheds, flower beds and fountains, cinder paths and hundreds of other improvements.

REMEMBER THIS YEAR 'TIS THE GREAT

INLAND EMPIRE EXPOSITION

A display that will show the progress and advancement of the people of the great INLAND EMPIRE in every branch of industry—an exposition that will show Utah as she is today—the "Queen of the Inland Empire."

SOME OF THE BIG FEATURES WILL BE

THE "BATTLE OF THE PLAINS"

The most realistic spectacle of modern times.

The "Desert," the Great Amusement Avenue

100 shows—startling—thrilling—instructive

The FINEST HORSE RACES EVER

Fastest Horses in the West.

THE PONY RACES AT NIGHT

Under a blaze of electric lights.

The Live Stock, Mineral, Art, School of Manufactures exhibits—the most elaborate and extensive ever seen at any state fair in the Intermountain country.

SALT LAKE CITY, OCT. 4th to 9th

H. S. ENSIGN, Secy.

A Boon to Weak Women

Restoration to Perfect Health Made Possible by Drugless Treatments

Wonderful Chiropractic Adjustments

Many women are suffering of ailments peculiar to the sex, and needlessly so, because of the knowledge of failure of prescribed drugs, or the surgeon's knife; or perhaps on account of inborn sexual propriety that prevails against the customary local examination practiced among the older professions.

Women who are weak, either by reason of accident, indiscretion or overwork, should consult for their own benefit, Salt Lake's eminent drugless healer, Dr. L. E. Farnsworth, who treats not the effect, but the cause of disease, and who works as first aid to nature in the restoring to perfect health, of broken-down constitutions. Dr. Farnsworth prescribes nor administers no drugs of any sort, but gives his treatments with his skilled hands for the correction of irregularities of the human system. He locates the cause of affliction where based in the controlling nerve centers, and corrects the human defects that nature may pursue her course to make a permanent cure.

Dr. Farnsworth is assisted in women's cases by Mme. DeLane, expert Masseuriste and Chiropractor, who gives scalp, facial and body massages, as well as chiropractic treatments.

EXAMINATION AND CONSULTATION FREE.

Utah Drugless Institute

Suite 209 Boyd Park (Auerbach) Bldg.

Office hours: 9 to 12 a. m.; 2 to 5 p. m.

L. E. FARNSWORTH.

HIGH SCHOOL NOTES

Principal Eaton of the high school has determined that the morals of the students this year shall be up to the standard of former years. In an assembly of the boys of the school last week, he prohibited the use of tobacco on the grounds, or on the way to or from school. The rules of the school board give the principal of the school authority over a pupil from the time he leaves home in the morning until he returns at night, and Principal Eaton says he will demand good behavior at all times.

The annual election of officers of the high school athletic association will be held during the early part of next week. It has been decided that a member of the faculty of the school, to be chosen by the principal, will be given the position of treasurer of the association. It is understood that Rowick S. MacNiece will be appointed, and he will handle all funds which belong to the association.

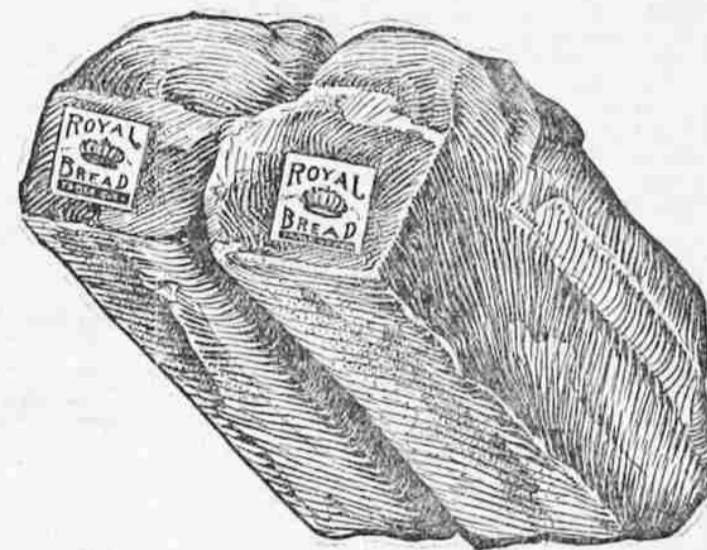

Through bad management a debt was contracted last year, and it will be the aim of the association to regain a firm financial basis before the present season is over.

Mrs. Weston Called. Mrs. W. J. Weston died at her home, 167 Center street, Saturday afternoon. The remains will be shipped to South Dakota for burial. Mrs. Weston was prominent in the James B. McKean post, Women's Relief corps, and that organization held a memorial service at the Hall's undertaking chapel Saturday afternoon, which was well attended by a number of the friends of the deceased.

Volunteers of America. Dr. R. G. McNiece, dean of the Westminster college, will speak at the meeting of the Volunteers of America, 19 Commercial street, tonight. There will be special music.

Royal Table Queen Bread

Notice the Groove

Is Baked in Mueller's Improved Bread Pan

(Patent Applied For.)

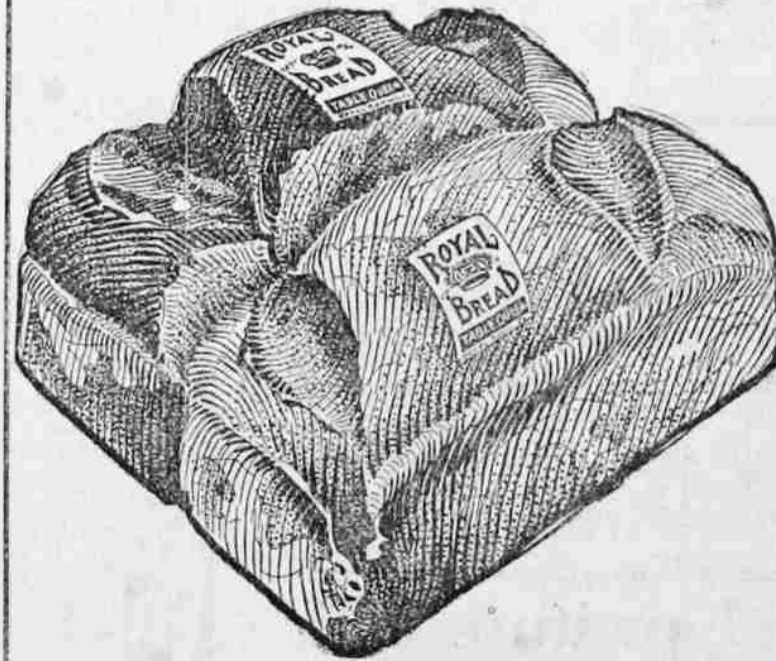

"Table Queen" Bread has been a big success from the first day it was introduced. The demand has increased by "leaps and bounds." It's Quality Bread.

To further distinguish it from every other bread on the market, we decided to make a special pan for its baking—a pan with a groove on the bottom. It's so satisfactory we have applied for a patent on it.

If you want to make sure of getting the genuine Royal Table Queen Bread, look for the groove and the crown label. Both indicate "superiority."

Only the highest grade hard wheat flour is used in making "Table Queen" Bread. It is made and handled under the most approved sanitary conditions.

The Freshest The Biggest
