MAN IS WORTH 1,000 EGGS

Same Ingredients Are to Be Found in
Both—Valued at \$2.45 for Il-
luminating Purposes.

What is a man? How much is he
worth from a scientific viewpoint?

According to one way of looking at
it a man is worth about \$2.50 a day
from his shoulders down and any-
where from \$50,000 to \$1,000,000 a
year from his shoulders up. This is
said to be the estimate of the average
successful business man.

The scientist, however, looks at the
question from another angle. Accord-
ing to him a man is worth \$2.45 for
illuminating purposes, since a man
weighing 150 pounds contains about
3,500 cubic feet of oxygen, hydrogen
and nitrogen in his constitution, which
at 70 cents per 1,000 cubic feet equals
the price above. Also a man contains
enough carbon to make 9,300 lead pen-
cils; enough phosphorus to make 800,
000 matches or enough to kill 500 per-
sons, and enough water to fill a 38-
quart reservoir.

Furthermore, it makes no difference
how sour a man may look he contains
about 60 lumps of sugar, a great deal
of starch, chloride of potash, magnesi-
um, sulphur and hydrochloric acid in
his system. There are 50 grains of
iron in the blood of an ordinary man,
enough to make one spike large enough
to hold his weight.

What is a man? This is the some-
what cynical answer of one scientific
man:

"Break the shells of 1,000 eggs into
a huge pan or basin and you have in-
gredients from which to form him
from his toenails to the most delicate
tissues of his brain."—Popular Sci-
ence Monthly.

EVERY FUR SEAL HAS HAREM

Male Sometimes Gathers More Than
100 Females on the Section of
Beach Which He Controls.

For seals are extremely polygamous
and the old males, which weigh
from 400 to 500 pounds, "haul up"
first on the breeding beaches. Each
bull holds a certain area, and as the
females, only one-fifth his size, come
ashore they are appropriated by the
nearest bulls until each "beach mas-
ter" gathers a harem, sometimes con-
taining more than 100 members, says
the National Geographic Magazine.

Here the young are born, and after
the mating season, the seals which
have remained ashore without food
from 4 to 6 weeks, return to the wa-
ter. The mothers go and come, and
each is able to find her young with
certainty among thousands of ap-
parently identical woolly black "kups."

SOMEBODY'S PAL

By ISABEL FROST.

It was not that Three Arrows was
naturally suspicious, but nature had
placed it so seclusively, all by itself
on the shoulders of Kaska mountain,
that it regarded strangers in the light
of interlopers. Therefore, it kept one
eye on Evelyn May from the moment
she stepped from the river steamboat.

Another thing that did not add to
her immediate popularity was her reti-
cence. Slim Rogers sized her up at long
distance from his point of vantage on
the lean-to porch of Rafferty's shack.
In Three Arrows he was accounted
not only local sheriff, but also the
final court of appeals on the standing
of strangers. Slim had been rather
idle of late. A pall of monotonous
morality had fallen over the land im-
mediately under his lawful guardian-
ship. There had been no killings since
Christmas, when Lone Duck, from
Nome, had jubilantly picked off two
harmless salmon trimmers from a
tribe down river.

The Golden Eagle had been doing
a languid business, supported only by
local patronage.

It was this observation which an-
noyed Evelyn. She felt herself under
suspicion and did not hesitate to show
Slim that she was aware of his official
scrutiny. She had taken up quarters
at the only abiding place for trans-
ients, Mrs. Rafferty's lodging house
and cafe. Mrs. Rafferty had ruled
public opinion in Three Arrows for
many moons.

"It's a long way for a girl of your
age to be traveling alone," she said
one morning.

"I love to travel," said Evelyn,
pleasantly. "Is it very far up Kas-
ka?" She looked from the window at
the great peak that seemed to touch
the morning clouds.

"There's nothing to see when you
get up there," said Mrs. Rafferty.
"You want to go up or down the river
if you're looking for sights."

Evelyn retreated into her shell at
once. From the corner of her eye she
could see Slim's tall figure shadowing
the doorway.

"Better put me up a lunch, Mollie,"
he said to Mrs. Rafferty, trying to ig-
nore the presence at the table by the
window. "We're going up Kaska
again today. Benson blew in last
night, and they think they've struck
a new scent."

Mrs. Rafferty bustled around, car-
ying deep slices of boiled ham as she
talked.

"Well, I hope to the hor-
ers, that you never en-
de of shooting at him

TO STORE VEGETABLES
Outdoor Cellar or Cave Is Con-
sidered Best Place.

House Is Too Warm and Atmosphere
Too Dry—Three Important Factors
Are Ventilation, Temperature
and Moisture.

"All things considered, an outdoor
cellar or cave is the best place to store
your vegetables for winter," says a
writer in an exchange. "An ordinary
house cellar is, as a rule, too warm
and the atmosphere too dry for most
vegetables. Sweet potatoes and
squash would keep well in such a
place, but that is about all. A pit is
also a very good place to keep most
vegetables, but is rather inconvenient.
There are three things to consider
when storing vegetables for winter
use; they are the temperature, venti-
lation and the moisture. They are
very important. Always keep them in
mind. You will either succeed or fail
by the correct or improper manage-
ment of these three things. The
germs which are the cause of decay
like a high temperature, and most of
them like a poorly ventilated place.

"With this in mind, the logical thing
to do, it would seem, would be to keep
the pit or cave where you are storing
your vegetables dry and as cool as
possible. This, however, you cannot
always do, as some vegetables must
have moisture to preserve their plump-
ness and quality, while others must
have heat in order to keep well. For-
tunately, it seems the vegetables that
require the moisture can be stored at
a very low temperature, and those
that must have heat can be kept in
a dry place. Beets, cabbage, carrots,
parsnips, potatoes, salsify and turnips
require more or less moisture, but
should be kept at a temperature as
near freezing as possible and yet not
freeze. Squash and sweet potatoes
like a warm, dry atmosphere. Keep
the temperature as near 50 or 60 de-
grees as possible. Onions must be
kept at about 33 or 34 degrees in
a dry place."

REWARD

Wanted for Murder.

On September 4, 1917, ERNEST
JOHNSON, colored, killed Captain
Elmer C. Messick near Jones'
Wharf, St. Mary's County, Md.

Johnson is described as being
about 20 years old; height about 5
ft., 4 inches, brown skin. He was
last seen in Baltimore City Septem-
ber 6. He is said to claim Norfolk,
Va., as his home.

\$250.00 will be paid for his arrest
and conviction.

By order of the County Commis-
sioners for St. Mary's County.

JOS. I. GOUGH, Clerk.

9-15-17.
